

PARTHAVI PATEL - Full Stack Developer

parthavi.pda@gmail.com | +1 (929) 483-7176 | USA | LinkedIn

PROFESSIONAL SUMMARY

Results-oriented **Full Stack Developer** with **6+ years** of experience in designing and implementing **scalable, cloud-native solutions** across industries. Skilled in developing high-performance applications using **Node.js, React.js, and Django**, with expertise in cloud platforms such as **AWS, Azure, and GCP**. Proven track record of enhancing software performance by **30%**, **reducing infrastructure** costs by **20%**, and streamlining deployment pipelines by automating **CI/CD processes**. Passionate about delivering innovative, reliable solutions through agile methodologies and **cutting-edge technologies**.

WORK EXPERIENCE

Capgemini **United States**
Full Stack Developer **June 2024 – Current**

- Architected and deployed distributed microservices leveraging **Node.js, Kafka, and Kubernetes** to implement **event-driven architecture**, resulting in a **30%** boost in platform scalability and a **25%** reduction in response latency.
- Built **Kubernetes** clusters with custom Helm charts to enable seamless service discovery and auto-scaling, configuring HPA with advanced metrics to optimize resource allocation and cut cloud infrastructure costs by **20%**.
- Enhanced **API Gateway** throughput by **35%** by integrating **Redis** caching and optimizing connection pooling, reducing response times from **500ms to 200ms**.
- Designed and implemented an **automated testing framework** using **Jest** and **Mocha**, achieving **95%** code coverage and reducing QA cycle times by **30%**, thereby improving **CI/CD efficiency**.

Odo **India**
Full Stack Developer **Mar 2020 – Dec 2022**

- Engineered a scalable inventory management system with **Django** and **SQLAlchemy**, optimizing database queries to handle **50,000+** product records with sub-second response times.
- Automated stock monitoring workflows using **Celery** and **Redis**, introducing real-time job scheduling to eliminate manual tracking and reduce errors by **70%**.
- Integrated **Twilio API** to automate SMS and email notifications for low-stock alerts, enhancing inventory accuracy by **50%** and reducing stockouts by **30%**.
- Streamlined **CI/CD processes** by automating workflows with **GitHub Actions**, introducing parallel builds and environment-specific deployments to cut deployment times by **40%** and boost release frequency.

LogicGo Infotech **India**
Jr. Full Stack Developer **June 2018 – Feb 2020**

- Developed a real-time chat application with **Django Channels** and **WebSockets**, implementing user authentication and **AES-256 encryption** to support **500+** concurrent users with zero downtime while ensuring compliance with data privacy standards.
- Built a responsive frontend with **PyScript** and **Tailwind CSS**, reducing rendering latency to under **100ms** for seamless dynamic content updates.
- Ensured application stability by achieving **95%** test coverage through unit and integration testing using **PyTest** and **Selenium**.

Acute Informatics Pvt Ltd **India**
Web Developer **Jan 2017 – May 2018**

- Designed and deployed real-time messaging systems using **Django Channels** and **WebSockets**, integrating **AES-256 encryption** to ensure secure communication and data privacy compliance.
- Improved **PostgreSQL database efficiency** by **35%** through advanced indexing and query optimization, enabling faster data retrieval and improved system performance.
- Reduced release cycles by **50%** by automating **CI/CD pipelines** with **GitHub Actions**, incorporating code linting, unit testing, and containerized deployments for consistent release quality.

KEY SKILLS

Programming Languages: JavaScript, Python, SQL, TypeScript
Frontend Development: React.js, Angular, PyScript, Tailwind CSS
Backend Development: Node.js, Django, GraphQL, REST APIs
Cloud Platforms: AWS (ECS, Lambda, S3, CloudFormation), Azure, GCP
DevOps & CI/CD: Kubernetes (Helm, HPA), Docker, Terraform, GitHub Actions, Jenkins
Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis
Testing & Automation: Jest, Mocha, PyTest, Selenium, Cypress
Other Tools: Kafka, Celery, WebSockets, Microservices Architecture, Agile Development
Key Competencies: Scalable Application Design, Cloud-Native Solutions, Performance Optimization, Automation

Certifications & Achievements

- Python and Django Full Stack Developer Bootcamp | Udemy - June 2024
- Kaggle Competition Child Mind Institute - Problematic Internet Use | Dec 2024

EDUCATION

Master of Science - Computer Science Long Island University • Relevant Coursework: Cloud Computing, Advanced Algorithms, Distributed Systems • Academic Project: Developed a cloud-native e-commerce platform using React.js, Node.js, and AWS, improving user scalability by 25%.	Jan 2023 – Dec 2024 USA
Bachelor of Technology - Computer Engineering Ganpat University • Relevant Coursework: Database Management Systems, Software Engineering • Academic Achievement: Secured top 5% ranking in the graduating class.	June 2016 – June 2018 India

PROJECTS

Work Tracking System: [Technologies: React.js, Node.js, Express, PostgreSQL, AWS, Kubernetes]

- Developed a task management system to streamline task assignment, tracking, and reporting.
- Built a real-time dashboard with automated reporting for productivity and deadline tracking.
- Integrated collaboration tools (email, calendars, notifications) for seamless workflows.
- Ensured scalability and security using AWS, Kubernetes, and role-based access control.
- Automated time tracking and optimized system performance for multi-user environments.

E-Commerce Platform: [Technologies: React.js, Node.js, Express, MongoDB, AWS S3]

- Developed a fully functional e-commerce platform supporting user authentication, product management, and secure payment gateway integration using Stripe API.
- Implemented REST APIs with Node.js and Express to handle user registration, product searches, and checkout workflows.
- Designed a dynamic and responsive frontend using React.js, ensuring seamless user experiences across devices.
- Integrated AWS S3 for scalable image storage, optimizing product image loading times by 20%.

Smart Attendance System: [Technologies: Python, Django, OpenCV, SQL, Bootstrap]

- Built a smart attendance system leveraging OpenCV for facial recognition to automate attendance tracking in classrooms.
- Developed a backend in Django with a MySQL database, allowing admins to upload class schedules and generate attendance reports.
- Created a user-friendly frontend with Bootstrap, providing real-time feedback on recognition accuracy and attendance logs.
- Improved recognition accuracy by 15% using Haar Cascades and image pre-processing techniques like histogram equalization.
