

RAVITEJA

PEGA SENIOR SYSTEM ARCHITECT/DEVELOPER

North Andover, MA • 978-375-8345 • ravi.pegas33@gmail.com • <https://www.linkedin.com/in/chirumalaraviteja/>

SUMMARY:

Certified Pega Senior System Architect with over 6 years of experience in designing, developing, and maintaining secure applications built on the Pega platform. Proficient in Pega PRPC, JavaScript, and cloud security principles with expertise in relational databases such as Oracle and MySQL. I am adept at understanding business requirements, designing application architecture, optimizing system performance, and implementing robust security measures. Strong knowledge of Agile methodologies, DevOps best practices, and automation using scripting languages like Python and Ansible. Skilled in collaborating with cross-functional teams to deliver innovative solutions that meet client needs. Experienced in developing comprehensive technical architectures, including system, data, and integration architectures, while utilizing advanced features of Pega BPM software.

EXPERIENCE:

JULY 2024 – PRESENT

PEGA DEVELOPER/ARCHITECT | FORD MOTORS | RALEIGH, NC

- Developed and maintained Pega platform applications, aligning with business needs and security requirements
- Designed and implemented workflows, case types, and UI elements to enhance process automation and user experience
- Conducted system performance tests and optimized application efficiency and security
- Coordinated with project managers to align business architecture with customer needs
- Deployed applications on servers, ensuring seamless integration (REST, SOAP, APIs) with legacy systems
- Automated security tasks and DevOps processes using Python and Ansible
- Designed and implemented role-based access control (RBAC) models to organize users into roles with appropriate permissions
- Monitored application performance and security, implementing necessary updates for optimization
- Managed security incidents, responded to alerts, and conducted post-incident analysis
- Collaborated with cross-functional teams to integrate security considerations throughout the software development lifecycle (SDLC)

JUNE 2020 – DEC 2022

PEGA DEVELOPER | EMIRATES NBD | HYDERABAD, INDIA.

- Designed and implemented workflows, class structures, and database models to optimize process automation and system efficiency
- Integrated Pega applications with Oracle and MySQL databases, ensuring data integrity and seamless information flow
- Troubleshoot application issues, performed debugging, and resolved code errors to maintain system stability and performance
- Implemented smart dispute resolution and fraud detection features in case management systems, enhancing security and compliance
- Followed Agile methodologies to ensure efficient software development cycles, including sprint planning, daily stand-ups, and retrospectives
- Utilized ServiceNow platform for end-to-end ticket processing, improving IT service management and response times
- Integrated Pega applications with external systems using secure APIs and web services, ensuring data protection and system interoperability
- Optimized application performance through regular monitoring, testing, and implementation of best practices
- Strong understanding of authentication and authorization protocols (OAuth, SAML).

JUNE 2018 – MAY 2020

PEGA DEVELOPER | JOHN DHEERE | HYDERABAD, INDIA.

- Proposed and integrated new features into Pega applications based on sprint analysis, enhancing functionality and user experience
- Demonstrated basic understanding and involvement with AWS RDS and S3 services for database management and storage integration
- Designed and implemented process flows, activities, and UI properties to optimize application performance and usability
- Created Decision Rules and Declarative Expressions to meet specific business requirements and automate decision-making processes
- Developed Rule-Connect-SQL integration rules using methods like RDB save, RDB Open, and RDB list for efficient database operations
- Implemented Work Object creation and assignment to Operators, streamlining workflow management
- Designed and implemented security measures to protect Pega applications from vulnerabilities, enhancing overall system integrity
- Developed secure API integrations and implemented security best practices to safeguard data and ensure compliance
- Implemented comprehensive exception handling for service failures, improving application reliability and user experience
- Utilized Agile methodologies to ensure efficient software development cycles and timely delivery of features

PROJECT-2

PEGA DEVELOPER | ANTHEM | HYDERABAD, INDIA.

- Defined and managed Operators, Access groups, Workbaskets, and Workgroups to ensure proper system access and workflow management
- Implemented property exposure and mapping using declarative rules, enhancing data accessibility and manipulation
- Created and maintained rule sets, rule set versions, access groups, operator IDs, Data-admin-DB-Table rules, workbasket rules, and data instances to support application functionality
- Utilized PRPC tools such as Clipboard, Tracer, and Rules Inspector for comprehensive application testing and debugging
- Conducted technical code reviews for peer offshore team members, ensuring code quality and adherence to best practices
- Collaborated with cross-functional teams to align technical implementations with business requirements and security standards
- Leveraged Pega platform features to optimize application performance and user experience

DECEMBER 2017 – MAY 2018

SYSTEM ENGINEER | KRISH TECHNOLOGIES | HYDERABAD, INDIA.

- Designed and developed user interfaces using HTML, CSS, and JavaScript
- Collaborate with UX/UI designers to implement design concepts and enhance user experience
- Optimize website performance and loading speed

SKILLS:

Pega BPM: Pega 7.x, 8.x, PRPC, Case Management, Declarative Rules, Activities, Decision Rules

Solution Architecture: Workflow Design, Class Structures, Data Models, Integration Architecture

Security & Cloud: Cloud Security, API Security, Infrastructure-as-Code (CloudFormation)

Programming Languages: Java, JavaScript, JSP, J2EE, XML, EJB, AngularJS, jQuery

Web Technologies: HTML5, CSS, JavaScript, XML

Integrations: REST, SOAP, Web Services, Connect-REST, Connect-SQL

Database & Query Management: SQL, PL/SQL, Oracle, MySQL, Data Reports, Logical & Physical Data Modeling

Tools & Platforms: Git, Jenkins, CI/CD, Azure, AWS

Methodologies: Agile Scrum, DevOps, Software Development Lifecycle (SDLC)

System Performance & Security: Application Monitoring, Troubleshooting, Privacy & Security Management

Incident Management: Security alerts monitoring, risk mitigation, compliance enforcement

PROJECTS:

- **Ford Guest XP Platform for Auto Servicing** Service scheduling is the main concept in this program. Providing the best UI experiences to the customers with different channels is the goal. Ford Pass mobile, owner web, dealer web and dealer portal (manager portal) are the different varieties of channels. Customers choose the vehicle, services and time of the appointment, then the reservation will be booked against the DMS (Dealer Management System) and appointments can be modified. The Pickup & Delivery concept in the program is a major part and handles the program via Redcap integration effectively.

CERTIFICATION:

CERTIFIED SENIOR SYSTEM ARCHITECT (CSSA)
