Career Summary

QA Engineer with over 9 years of experience in manual and automation testing across healthcare and retail domains. Proficient in functional, regression, integration, API, and UAT testing using Java, Selenium, TestNG, Postman, and SQL. Hands-on experience in maintaining reusable automation framework and regression scripts, improving QA processes, and collaborating with developers and product owners to embed quality within Agile lifecycles.

Strong domain knowledge in healthcare systems, including Medicare and Medicaid plan validation, HIPAA EDI testing (834, 837, 835), and eligibility and benefit workflows. Experienced in retail POS systems, covering payment processing, loyalty programs, promotions, reporting, and cash and inventory management.

Collaborative and detail-oriented professional with a consistent record of ensuring data accuracy, compliance, and high-quality software delivery. Adept across all phases of the Software Development Life Cycle (SDLC) and Software Testing Life Cycle (STLC) within both Waterfall and Agile environments, actively participating in all Scrum ceremonies (standups, planning, reviews, retrospectives) to support continuous QA improvement.

Technical Skills

Testing: Functional, Regression, Integration, UAT, End-to-End, Smoke, Sanity, Exploratory; SDLC, STLC, Defect Tracking

Automation: Java, Selenium WebDriver, TestNG, Maven, Jenkins, Cucumber; creating reusable scripts and maintaining regression suites

API Testing: Postman, SoapUI, RESTful APIs, XML, JSON

Test Management: JIRA, ALM/Quality Center, Azure DevOps (ADO), Rally, Xray, Zephyr, IBM ClearQuest

Database: SQL Server, Oracle, DB2, Teradata, PostgreSQL, DBeaver

Version Control & CI/CD: Git, GitHub, Jenkins

Healthcare Domain: Medicare/Medicaid, ACA, HIX, CHIP, CMSP, Health Connector, MMIS, HIPAA EDI (834/835/837), benefit rule validation, claim adjudication.

Retail Domain: POS systems, payment gateways, cart and checkout, returns, promotions, loyalty programs, back-office cash management, resiliency testing, and inventory management

Tools & Collaboration: Windows, UNIX, Eclipse, MS Teams, Slack, Confluence, SharePoint

Professional Experience

CVS Health, Woonsocket, RI | Apr 2020 – Sept 2025 Senior Software QA Analyst

As a Senior Software QA Analyst at CVS Health, I played a key role in developing the Personalized Total Access (PTA) tool—a Salesforce-based solution that automated vendor offer creation and campaign integration. This replaced a manual, email-driven process, reducing coupon errors, improving offer accuracy, and enhancing reporting for campaign performance. The PTA tool helped standardize workflows and streamline offer delivery.

I also contributed to modernizing the Point-of-Sale (POS) system by testing and implementing features like digital receipts, upgraded payment systems, loyalty program integration, and a unified back-office platform. These enhancements improved store operations and elevated the customer experience.

Responsibilities:

- Led functional and end-to-end testing for shopping cart, checkout, and payment workflows, ensuring accurate inventory, pricing, tax validation (including bottle deposits and state-based exemptions), and promotion application across 9000+ stores.
- Developed and executed test cases for cash management operations such as deposits, turn-ins, paid-outs, and store closing reports.
- Verified multiple payment methods (credit/debit cards, contactless, EBT, checks, and split payments) through gateway and backend validation, ensuring 100% transaction accuracy.
- Performed system resiliency under failure scenarios like network outages and third-party service disruptions.
- Validated data integrity across checkout and payment processing, ensuring accurate order totals and tax calculations.
- Analyzed transaction logs (TLOGS) and performed data mapping to confirm downstream data flow and 100% reporting accuracy.
- Conducted API testing between integrated applications using Postman to ensure seamless communication and data exchange.
- Designed, tested, and validated the Personalized Total Access (PTA) Salesforce application to automate vendor offer creation and campaign integration, reducing coupon-related errors by 70%.
- Verified vendor-created offers, pricing rules, and campaign configurations for alignment with business requirements and system standards.
- Collaborated with developers, product owners, and cross-functional teams to define testable acceptance criteria, resolve defects, and deliver features on schedule.
- Participated actively in all agile ceremonies - daily standups, sprint planning, reviews, and retrospectives to support continuous improvement.
- Automated smoke and regression testing using Java, Selenium WebDriver, TestNG, and Maven, maintaining reusable scripts and test suites, cutting manual testing time by 35% and improving release cycle efficiency.
- Used JIRA and IBM ClearQuest for defect tracking, test execution.
- Conducted User Acceptance Testing (UAT), gathering stakeholder feedback and supporting production readiness

- Contributed to defining QA standards and process documentation, ensuring consistent testing practices across multiple projects.
- Supported metrics and quality reporting for releases, improving visibility into test coverage and defect trends.

Optum Health, Boston, MA | Mar 2014 – Aug 2019
Senior QA Analyst

At Optum Health, I worked on the **Massachusetts Health Insurance Exchange (MAHIX)** project, supporting the state's initiative to enhance the Health Connector and **Integrated Eligibility System (IES)** to meet ACA (Affordable Care Act) requirements. My work focused on end-to-end testing of **eligibility, enrollment, MMIS, and plan shopping** workflows, ensuring accuracy, compliance, and seamless data exchange across integrated systems.

Responsibilities:

- Participated in JAD sessions with business analysts, state stakeholders, and development teams to gather requirements and define testing objectives.
- Validated complex business rules for **MassHealth, Connector Care, and Health Connector Plans** to ensure ACA and state compliance.
- Designed and executed test cases for functional, regression, integration, and end-to-end scenarios, including plan shopping for health and dental plans, auto-renewals, and eligibility determinations, reduced post-production defects by 30%.
- Created and maintained a Requirements Traceability Matrix (RTM) to ensure complete test coverage and accurate mapping between requirements, test cases, and defects.
- Performed backend testing using advanced SQL queries to verify data consistency across all systems.
- Conducted API and batch job testing to validate data transfers and automated workflows between applications.
- Supported **integration testing between HIX and MMIS**, and external agencies such as LexisNexis, DHS, IRS, and DOR, verifying accurate data exchange and eligibility determinations.
- Mapped and validated **PDF-based eligibility and renewal notices** to ensure correct member communication.
- Collaborated with business analysts and state SMEs to interpret rule documents and convert them into testable scenarios.
- Tested multiple Medicaid coverage types, including **Health Safety Net (HSN)** and **Children's Medical Security Plan (CMSP)**.
- Managed defects and test execution using JIRA and ALM/Quality Center, maintaining full traceability,
- Supported UAT cycles and production releases with test documentation and coordination across teams.
- Contributed to early automation efforts by identifying regression test cases suitable for automation, reducing manual testing time by 30%.

Florida Blue, BCBS, Jacksonville, FL | Jul 2013 – Jan 2014
QA Analyst

At Florida Blue, I worked on the Claim Processing System for Blue Care and Exchange Programs, focusing on benefit rule validation and HIPAA EDI testing for 834, 837, and 835 transactions. I verified member and provider data, mapped diagnosis and procedure codes, and ensured compliance with HIPAA standards. I maintained the Requirements Traceability Matrix (RTM), conducted backend validation using SQL, and tested business rules to enhance claims processing accuracy.

Responsibilities:

- Designed test strategies and test cases to ensure full coverage across benefit claims, eligibility workflows, and claim adjudication.
- Performed HIPAA EDI testing for 834 (Enrollment), 837 (Professional/Institutional Claims), and 835 (Payment and Remittance) transactions to ensure data integrity.
- Validated eligibility rules and benefit claims for multiple lines of business, including Coordination of Benefits (COB), Co-insurance, and deductibles.
- Verified diagnosis, procedure, and provider information across different lines of business.
- Reviewed EDI segment structures and code sets for accurate mapping and field validation.
- Conducted backend testing using SQL queries to validate data consistency between EDI files, provider tables, and internal databases.
- Executed system integration (SIT), functional, and regression testing across claims and eligibility modules.
- Maintained a Requirements Traceability Matrix (RTM) to ensure full coverage between business requirements, test cases, and defects.
- Logged and tracked defects using ALM/Quality Center, working closely with developers to resolve issues.

Education

Bachelor's in Computer Engineering

Kathmandu University, Nepal (2004 – 2008)
