PROFESSIONAL SUMMARY

- Around **5+** years of experience in IT industry comprising of delivery management, design, development, release & deployment, and cloud implementation.
- Experience of the full Software Development Life Cycle (SDLC) and Methodologies & Validations to ensure the Quality Assurance Control.
- Experience in Infrastructure Development and Operations involving AWS Cloud platforms, EC2, EBS, S3, VPC, RDS, SES, ELB, Auto scaling, Cloud Front, Cloud Formation, Elastic Cache, Cloud Watch, SNS.
- Experienced in Provisioning of IAAS & PAAS concepts of cloud computing and implementing using, Aws, Azure, Google Cloud Platform understanding the principals of (SCM) in Agile, Scrum and Waterfall methodologies.
- Experience in IT industry as **DevOps/ Agile Operations, Software Integration, Configuration, Release Engineer**, Change/Incident Management, **AWS, AZURE & Open-source technologies** and **Cloud Management**.
- Automating environment build and provisioning using virtualization, containerization and orchestration tools with **Docker, VMWare, AWS, and Kubernetes**.
- Experience in provisioning Kubernetes cluster and deploying and maintaining and Scaling workloads.
- Experience on version control systems like **Subversion, GIT**, and used Source code management client tools like **GitHub, GitLab, Git GUI, Bit Bucket** and other command line applications.
- Experience in **System Administration**, System Builds, Server builds, Installs, Upgrades, Patches, Migration, Troubleshooting, Security, Backup, Performance Monitoring and Fine-tuning on UNIX (Red Hat Linux) Systems.
- Firmware upgrades on CISCO hardware servers.
- Configure hardware RAIDs and replacing the faulty disks by coordinating with vendors.
- Experienced in working on **Docker hub** and **Docker swarm, Docker compose** creating **Docker images** and handling multiple images primarily for middleware installations and domain configuration.
- Knowledge in design and configuration of **Azure** for automation solution development for Microsoft POC engagements, Azure backup, Azure site recovery, IaaS.
- Implemented continuous integration with **Jenkins, TeamCity, Hudson** and End-to- End automation for all Build and deployments.
- Strongly hands on experience in scripting such as - **Python, UNIX Bash and Shell Scripting**.
- Extensive experience using **MAVEN, ANT**, and **Gradle** as build tools for the building of deployable artifacts from source code.
- Engineer, manage, and support source control and **binary repository systems** such as **Bitbucket / Stash, Git, SVN** and **Nexus**.
- Experience in JIRA & Confluence administration involving creation and management of custom, complex projects, workflows, security schemes, custom fields, dashboards and reports configurations.
- Automated the process of launching and stopping/terminating EC2 instances on Amazon AWS with BOTO.
- Experience and knowledge of **Cloud Management Platform (IaaS, PaaS, SaaS)**.
- Worked on AWS **Cloud Formation** templates to using **Terraform** with existing plugins. To ensure successful deployment of Web applications and database templates.
- Extensively used Docker/Kubernetes for containerization, virtualization, Ship, Run and Deploy the application securely to fasten Build/Release Engineering. Involved in Provisioning AWS Infrastructure using **Terraform** scripts from Jenkins.
- Expertise in writing new plugins for Jenkins to support new functionality in **Terraform**.
- Used **Nagios, Grafana** and **CloudWatch** for monitoring/metric collection for applications in a **Cloud** based environment.

TECHNICAL SKILLS

Web Technologies	HTML, XML, CSS
Languages	C, C++, .NET, XML, SHELL, PERL, Python, Ruby, PowerShell
Build/Release Tools	Jenkins, Docker, AWS, Chef, puppet, Ant, Vagrant, Hudson, GitHub, Ansible, Open Stack and Salt Stack, Splunk, Zabbix, Terraform, Nexus,
SCM Tools	Git, CVS, SVN, Perforce, TFS, ClearCase
Operating Systems	UNIX, Linux - Red hat/Centos/ Ubuntu, HP-UX, Solaris, Microsoft Windows NT, MAC OS
Database	MySQL, Oracle 9i/10g, SQL Server, Mongo DB, Cassandra, Postgress
AWS Services	EC-2, ELB, VPC, RDS, IAM, Cloud Formation, Fargate, S3, Cloud Watch, Cloud trial, Cognito's SNS, SQS, SWF, EBS, Amazon direct connect
Web Servers	Oracle Web logic server11g/10g /9, Apache, Tomcat, NGINX WebLogic 8.1/9.2, WebSphere, JBoss, Oracle ATG web commerce, IIS
Scripting Languages	UNIX Shell scripting, Bash, Perl scripting, PowerShell, Ruby scripts, python scripting
Cloud Technologies	Amazon Web Services, Microsoft Azure (IaaS, PaaS & SaaS), OpenStack

Education

- Master's Degree from Kent State University, OH

PROFESSIONAL EXPERIENCE

Goldman Sachs, NY May 2024 - Present DevOps/Cloud Engineer RESPONSIBILITIES:

- Managed Amazon Redshift clusters such as launching the cluster and specifying the node type and used AWS Beanstalk for deploying and scaling web applications and services developed.
- Administrating and supporting company's Azure Kubernetes infrastructure, ensuring it is secure and resilient.
- Utilized **Kubernetes** and **Docker** for the runtime environment of the **CI/CD** system to build, test deploy.
- Changing the **AWS** infrastructure Elastic Beanstalk to Docker with Kubernetes.
- Kubernetes is being used to orchestrate the deployment, scaling and management of Docker Containers.
- Used Jenkins pipelines to drive all microservices builds out to the Docker registry and then deployed to Kubernetes, Created Pods and managed using **Kubernetes**.
- Working with an agile development team to deliver an end-to-end continuous integration/continuous delivery (**CI/CD**) product in an open-source environment using Ansible and Jenkins to get the job done.
- Implement continuous integration methods using Jenkins, these include - pull request builder, automatic build and unit testing, source code analysis, merge and perform deployable release builds.
- Used **ANT** and **MAVEN** as a build tool on java projects for the development of build artifacts on the source code.
- Research and implement new tools such as Kubernetes with Docker to assist with auto-scaling, continuous integration, rolling updates with no downtime.
- Played a key role in automating the deployments on AWS using **GitHub**, **Terraform** and **Jenkins**. Provided consistent environment using Kubernetes for deployment scaling and load balancing to the application from development through production, easing the code development and deployment pipeline by implementing **Docker** containerization.
- Implement a Continuous Delivery pipeline with Docker, Jenkins and GitHub and AWS AMI's.
- Develop comprehensive monitoring solutions to provide full visibility to the different platform components using tools and services like Vistara, Graphite, ELK, Datadog, New Relic and other similar tools.

- Configured Ansible to manage **AWS** environments and automate the build process for core AMIs used by all application deployments including Auto Scaling and Cloud Formation Scripts.
- Responsible for build and deployment automation using VM Ware ESX, Docker, Kubernetes containers.
- Connected continuous integration system with GIT version control repository and continually build as the check-in's come from the developer.
- Implementing a Continuous Delivery framework using Jenkins, **Chef**, **Maven** & Nexus in **Linux** environment.
- Created Custom Puppet modules for bootstrapping new servers with required application dependencies and packages.
- Maintained **Puppet** servers and management application that can use ServiceNow (**CI**) data to bring computers into a desired state by managing files, services or packages installed on physical or virtual machines.
- Create and manage **Docker** deployment pipeline for custom application images in the cloud using Jenkins.
- Automate various infrastructure activities like **Continuous Deployment**, Application Server setup, Stack monitor using Ansible playbooks and Integrate Ansible with Jenkins.
- Work with Configuration Management automation tool **Ansible** and work on integrating Ansible **YAML** Scripts.
- Use Kubernetes to deploy scale, load balance, scale and manage docker containers with multiple namespace versions.
- Use GIT as a source code repository for branching, parsing, pushing, and pulling the source code day to day basis.

Environment: Terraform, Tomcat, AWS, ECS, ECR, Docker, Jenkins, Cloud foundry, Ansible, Shell Scripting, Kubernetes, Amazon, Groovy, Maven, CloudFormation, Flyway, SonarQube, Jira, OpenShift, Docker, Kubernetes.

Well Fargo, India
2023

Dec 2021 - June

AWS DevOps Engineer

RESPONSIBILITIES:

- Configuring and deploying instances on AWS environment and Data centers, also familiar with EC2, Cloud watch, Elastic Search and managing security groups on **AWS**.
- Designed **AWS** Cloud Formation templates to create custom sized VPC, subnets, NAT to ensure successful deployment of Web applications and database templates.
- Experienced in Amazon EC2 setting up instances, virtual private cloud (VPC) and security groups and Created monitors, alarms and notifications for EC2 hosts using Cloud Watch.
- Responsible for build and deployment automation using VM Ware ESX, Docker, Kubernetes containers
- Maintained the user accounts (IAM), RDS, Route 53, VPC, RDB, Dynamo DB, SES, SQS and SNS services in **AWS** cloud.
- Worked on creation and managing IT infrastructure and application stack using AWS Cloud Formation and writing the template file using JSON.
- Wrote Ansible playbooks and securing a server with Ansible and Provisioning, deployment with Ansible and Worked on developing Ansible Go Scripts for automating regular tasks and worked on playbooks for Ansible in **YAML** scripting
- Extensively involved in infrastructure as code, execution plans, resource graph and change automation using Terraform.
- Managed **AWS** infrastructure as code using Terraform. Used terraform to implement auto scaling, cloud watch in Jenkins.
- Integrated various Version control tools, build tools, Nexus and deployment methodologies (scripting) into Jenkins to create an end-to-end orchestration build cycles.
- Experience in setting up Upstream and Downstream Jobs in Jenkins and involved in managing the Jenkins Pipelines, Administered and Engineered Jenkins for managing weekly Build, Test and Deploy chain as a **CI/CD** process.

- Implementing a **CI/CD** (Continuous Integration /Continuous Delivery) framework using Jenkins, Maven & Artifactory in Linux environment and Integration of Maven/Nexus, Jenkins, Git, Confluence, Jira and Cloud Foundry.
- Installed and configured Centos, Ubuntu, RHEL operating systems on large distributed environment and configured Jenkins, Maven, Chef, Docker.
- Established **Chef** Best practices approaches to system deployment with tools with vagrant and managing Chef Cookbook as a unit of software deployment and independently version controlled.
- Worked with Docker Management platform, leveraged Custom Docker Images as Containerized Apps within the Docker Engine as Multi Stack Application like LAMP.
- Implemented Continuous Integration by integrating with different tools like Maven, GIT, SonarQube, Nexus with Jenkins. Involved in Installing **Jenkins** on Linux environment and implemented master – slave configurations to run multiple build operations in parallel.
- Deliver Docker container deployment mechanism to decrease cost of teams building their own continuous delivery pipeline.
- Day to day activities like building and deploying code in different environments like DEV, SIT, UTA, Pre-Prod and Prod using Jenkins, Docker, Kubernetes and ARM, CHEF and Ansible.
- Involved in institutionalizing Splunk forwarder arrangement, design and support across **UNIX** and Windows platforms.
- Designing and maintaining production-quality Splunk dashboards. Expert in installing and using Splunk apps for Unix and Linux (Splunk nix) & Linux scripting (SH, BASH, KSH).
- Created and maintained Bamboo software build plans building Java applications using Maven.
- Configured, Maintained and customized **JIRA** and Confluence as per the requirements to promote team co-ordination and Ticketing system.

Environment: Unix/Linux, Terraform, AWS, Ansible, Jenkins, Amazon Lambda, Ansible, RDS, Ruby Scripting, Python, Shell Scripting, Kubernetes, Groovy, Maven, CloudFormation, Liquibase, SonarQube, Jira, Cloud foundry, VMware, GIT.

L&T, India

May 2019 –

Nov 2021

Devops Engineer

RESPONSIBILITIES:

- Involved in designing and deploying multiple applications utilizing almost all the Azure stack (Including VMs, VNets, Azure ExpressRoute, Azure Cosmos DB, RDS, App Service, Azure Synapse Analytics, AKS, Azure IoT Central, Azure AD) focusing on high availability, fault tolerance, and auto-scaling
- Build Repository for Cloud artifacts using GIT Version Control System & Setup Microsoft Azure across the environment
- Cloud Platforms AZURE (API Management Services, Data Factories, App Services, Data Lake Store, SQL Databases & Virtual Machines).
- Creating, validating and reviewing solutions and effort estimate of converting existing workloads from classic to ARM based Azure Cloud Environment.
- Automated Weekly releases with **ANT/Maven** scripting for Compiling Java Code, Debugging and Placing Builds into Maven Repository.
- Responsible for orchestrating **CI/CD** processes by responding to Git triggers, human input, and dependency chains and environment setup, Design and document **CI/CD** tools configuration management.
- Used Jenkins pipelines to drive all microservices builds out to the Docker registry and then deployed to Kubernetes, Created Pods and managed using Kubernetes.
- Implemented ISTIO as a service mesh component to observe and control network flow across services running in multiple Kubernetes clusters.
- Participated in Migration of On-Premise machines, hard drivers and web applications to AZURE on PowerShell using the Azure Site Recovery
- Utilized Configuration Management Tool **Chef** & created Chef Cookbooks using recipes to automate system operations and configure Apache Tomcat, Jenkins, and Run-Deck and deployment automation.
- Performed SVN to GIT/Bitbucket migration and managed branching strategies using **GIT** workflow. Managed User access control, Triggers, workflows, hooks, security and repository control in Bitbucket.

- Experience using Nagios monitoring system and different Bug Tracking Tools like Remedy, Jira, and ServiceNow
- Responsible for setting up the Azure Kubernetes Service (**AKS**) to deploy spring applications, configure the Azure Container Registry (ACR) to store Docker Images and manage the Azure Kubernetes cluster.
- Installed Docker registry for local upload and download of Docker images and from Docker hub.
- Deployed **Java/J2EE** applications to Application servers in an agile continuous integration environment and also automated the whole process.
- Work with development/testing, deployment, systems/infrastructure and project teams to ensure continuous operation of build and test systems.
- Implemented a continuous deployment pipeline with Jenkins and Jenkins workflow on Kubernetes.

Environment: Azure, PowerShell, XL Release, XL Deploy, Kubernetes, Kafka, GIT, Python, Redis, VMware, Jenkins, Terraform, Ansible, SVN, Puppet, Open Stack, Docker, Jira, Maven, VSTS, Apache Tomcat Application Server, Salt stack
