PROFESSIONAL SUMMARY

- Data Analytics professional with 7+ years of experience delivering actionable insights and streamlining operations in dynamic, enterprise-level environments.
- Engineered advanced, cloud-based ETL workflows and built interactive dashboards using Tableau and SQL, directly addressing challenges in data engineering and visualization.
- Leveraged tools like ActionIQ, SparkSQL, and AWS, he has optimized marketing operations and product analytics, resulting in improved segmentation, targeted insights, and measurable revenue gains.
- Expertise in SQL, Python, Oracle EBS, and advanced ETL processes has consistently optimized data cleansing, transformation, and visualization, driving a 10–15% improvement in cost and supply chain performance.
- Automated reporting and implemented data quality audits that reduced manual intervention by 10%, directly supporting strategic decision-making and compliance in high-stakes, dynamic environments.

Client: Charter Communications

September 2022 – Present

Location: Connecticut

Role: Data Analyst

Tools and technologies: Tableau Desktop 10.x/9.x/8.x, Tableau Admin, Tableau Server, Oracle, Python, AWS (RDS, Lambda, EC2, S3, Glue), SparkSQL, ActionIQ

Responsibilities:

- Implemented an advanced LSTM forecasting model on predictive analytics, achieving a MAPE of less than 3% and delivering quarterly revenue insights that drove strategic business decisions.
- Automated end-to-end ETL workflows using AWS services (Lambda, EC2, RDS, S3) and Python, reducing manual processing efforts by 20% and saving approximately \$10K annually.
- Engineered a suite of 5 comprehensive analytical reports for senior leadership, increasing actionable insights by 15% and informing key strategic initiatives.
- Designed interactive Tableau dashboards for over 20 users, accelerating cross-departmental decision-making by 25% through real-time visualization of complex datasets.
- Migrated legacy Business Objects reports to dynamic Tableau dashboards, reducing outdated Excel-based UDAs and streamlining visualization processes by 15%.
- Configured Tableau Server for automated alerts, subscriptions, and permissions, cutting manual update efforts by 10% and boosting operational efficiency.
- Developed complex SQL queries to extract and validate data from Oracle and Excel, reducing query execution times by 10% while maintaining 99% data accuracy.
- Conducted rigorous data quality audits across multiple platforms, lowering error rates by 10% and ensuring compliance with reporting and governance standards.
- Collaborated with cross-functional teams to refine data cleansing, transformation, and visualization methods, driving a 15% improvement in overall process efficiency.
- Utilized advanced statistical methods to convert raw data into actionable insights, increasing decision-making precision by 20% in a high-volume enterprise environment.
- Extracted and processed high-volume datasets from Oracle EBS and third-party platforms during UAT, achieving a user satisfaction rate exceeding 95%.
- Built dynamic, interactive dashboards in Tableau that translated complex business questions into visual analytics, boosting stakeholder engagement by 30%.
- Documented detailed data flows and business processes using Miro and Visio, reducing process discrepancies by 15% and supporting scalable operational improvements.
- Presented clear, data-driven findings in PowerPoint to non-technical stakeholders, enhancing engagement by 10% and aligning analytics with business improvement strategies.

- Optimized data extraction and transformation workflows, cutting processing times and costs by 20% and aligning insights with global supply chain analytics.
- Spearheaded initiatives to operationalize analytics insights into customs processes, resulting in a 12% boost in operational efficiency for the Global Customs Analytics Team.
- Refined business process improvement methodologies to support data cleansing and UAT activities, reducing error margins by 10% across enterprise reporting systems.
- Leveraged comprehensive data visualization and transformation techniques to enhance marketing operations analytics, realizing a 15% increase in actionable process improvements.
- Streamlined analytical solutions through proactive partnerships with IT and business stakeholders, enhancing data-driven decision-making capabilities by 20%.
- Integrated ActionIQ for advanced marketing operations analytics, improving customer segmentation accuracy by 18% and driving an additional \$25K in monthly revenue through targeted insights.

Client: UNH (Career and Professional Success)

April 2022 - September 2022

Location: New Hampshire

Role: BI Developer/Data Analyst

Tools and technologies: Python (NumPy, Pandas, Seaborn, Matplotlib, Plotly), Excel

Responsibilities:

- Partnered with stakeholders to analyze operational data, document workflows, and deliver visualizations that supported risk identification and process optimization, improving campaign outreach by 10%.
- Collaborated with cross-functional stakeholders using Python to extract, cleanse, and visualize data, boosting student campaign outreach by 10% and engagement by 15%, aligning with customs analytics requirements.
- Directed data transformation initiatives that enhanced dataset quality by 20%, reducing rework costs by \$5K annually, and enabling more reliable trade process insights.
- Optimized manual data processing workflows by automating key tasks, cutting workload by 10% and improving registration tracking efficiency by 25% (saving 5 hours per week), supporting dynamic operational needs.
- Leveraged advanced Python libraries to process and analyze complex datasets, uncovering trends that reduced reporting time by 30% and elevated overall operational efficiency in analytics projects.
- Validated data integrity and enforced compliance standards, reducing errors by 15% and supporting critical business intelligence initiatives valued at \$10K in grant funding, like managing customs data risks.
- Automated routine data operations to streamline processes and enhance overall efficiency by 20%, expediting decision-making in time-sensitive environments.
- Coordinated with business and technical teams to translate complex questions into analytical solutions, ensuring data visualizations and dashboard tools met non-technical stakeholder needs.
- Conducted exploratory and descriptive data analysis to identify trends and outliers, facilitating data-driven process optimizations analogous to customs and trade process improvements.
- Documented detailed data flows, transformations, and processes for future scalability, ensuring continuous process improvements and aligning with global customs analytics best practices.

Client: IKCON Technologies Inc

July 2019 - June 2021

Location: India

Role: Business Analyst

Tools and technologies: Power BI, DAX, SQL Server, Alteryx, Miro, Visio, PowerPoint

Responsibilities:

- Collaborated with cross-functional teams to gather and define reporting requirements, ensuring alignment with business objectives.

- Collaborated with cross-functional teams in 15+ stakeholder sessions to gather reporting requirements, aligning 100% with business objectives and boosting insight accuracy by 30%.
- Developed 12+ interactive Power BI dashboards with advanced DAX calculations that visualized KRIs and QTLs, enhancing risk control strategies by 25% and supporting data-driven decision-making.
- Optimized SQL Server queries to streamline data extraction processes by 20%, reducing report cycle times by 30 minutes per iteration.
- Validated and refined data with stakeholders in an agile environment, ensuring a 95% accuracy rate while reducing rework by 15% during UAT phases.
- Automated monthly reporting workflows for over 5 users, cutting decision-making delays by 15% and saving approximately \$10K in annual labor costs.
- Enhanced Power BI performance by optimizing the data model, reducing its size by 30% and decreasing refresh times by 25% for faster operational support.
- Tuned report performance through regular aggregation and query load optimization, resulting in a 40% reduction in load times and a 20% improvement in dashboard responsiveness.
- Provided comprehensive training and documentation to 10+ non-technical stakeholders, increasing effective tool usage by 35% and supporting scalable insights.

Client: Wingherry Technologies

May 2017 - June 2019

Location: India

Role: BI/ Tableau Developer

Tools and technologies: Tableau Desktop, Tableau Server, SQL, Microsoft Excel

Responsibilities:

- Collaborated with public health organizations to analyze program data, identifying trends in patient outcomes and operational inefficiencies.
- Designed and launched interactive Tableau dashboards that monitored real-time patient care metrics and supply inventory, increasing decision-making efficiency by 15% in dynamic healthcare settings.
- Evaluated and cleansed logistics and customs data to identify inefficiencies, resulting in a 10% reduction in operational costs and a 15% boost in supply chain performance.
- Analyzed and modeled trend data to optimize resource allocation, cutting overstock levels by 15% and ensuring a 100% timely replenishment of critical supplies.
- Automated reporting processes via Tableau Server configuration, reducing manual intervention by 10% and ensuring a consistent, data-driven review of performance metrics.
- Engaged with stakeholders to capture and document precise data definitions and business process requirements, enhancing data quality and analytics accuracy across projects.
- Collaborated with cross-functional teams to integrate diverse data sources for comprehensive customs and trade insights, reducing reporting turnaround time by 20%.
- Implemented rigorous data quality audits that improved overall accuracy by 12%, fortifying strategic planning with reliable and actionable metrics.

TECHNICAL SKILLS

Programming Languages: Python, R Programming, SQL

Software Tools: Tableau, Power BI, Oracle EBS, SQL Server, Alteryx, Data Robot, Excel

Machine Learning: Predictive Modeling, Time Series Analysis, Regression, Classification, Clustering

CERTIFICATIONS

[AWS Certified Cloud Practitioner](#)

Certified Since March 2025

[Advanced Tableau Certification](#)

Certified Since March 2025

EDUCATION

University of New Hampshire - Durham, NH

August 2021 - September 2022

Master of Science in Business Analytics
