

Ramesh Babu Muthireddy

Senior Salesforce Developer | Salesforce 5X Certified

📞 (830)-318-0382 @ muthireddy1985@gmail.com 🔗 <https://www.linkedin.com/in/ramesh-muthireddy>

SUMMARY

Salesforce Certified Developer with over **10 years** of hands-on experience in **Salesforce** development and more than **15 years** of overall IT expertise. Proven ability to design, develop, and implement scalable, high-performance Salesforce solutions tailored to complex business needs. Highly skilled in **Apex, Visualforce, Lightning Web Components (LWC), Salesforce Flows, CPQ, Vlocity** and declarative customization. Extensive experience in system **integration**, including building and managing integrations with external systems using **RESTful/SOAP APIs**, platform events, and middleware tools such as **MuleSoft, SnapLogic**, and Informatica. Possesses a strong understanding of the full software development lifecycle (**SDLC**) and **agile** methodologies, with a consistent track record of delivering robust, user-centric solutions in fast-paced, collaborative environments.

CERTIFICATIONS

Salesforce Certified **CPQ Specialist**
Salesforce Certified **AI Specialist**
Salesforce Certified **AI Associate**
Salesforce Certified **Platform Developer I**
Salesforce Certified **Administrator**

SKILLS

Salesforce Development (Apex, Triggers, Visualforce, Lightning Web Components - LWC), Web Technologies (JavaScript, HTML, CSS), Salesforce Administration and Declarative Customization, Salesforce Flows and Process Automation, Salesforce CPQ, Salesforce Vlocity (OmniStudio), System Integration (RESTful APIs, SOAP APIs, Platform Events), Middleware Tools (MuleSoft, Informatica, SnapLogic), Custom Application Development, Data Migration and Data Management, Agile Methodologies (Scrum, Kanban), Full Software Development Lifecycle (SDLC), Solution Architecture and Design, Performance Optimization and Scalability, Problem Solving and Debugging, Cross-functional Team Collaboration, Version Control (Git), Development Tools (Visual Studio Code - VSCode), DevOps and CI/CD (Jenkins, Copado, Gearset), Salesforce Security and Compliance (Salesforce Shield, GDPR, HIPAA), Release Management, Testing and Quality Assurance (QA).

EXPERIENCE

Client: **Lob.com**

February 2025 – Present

Role: **Senior Salesforce Developer**

Project Details:

The project aimed to integrate Salesforce with Subskribe, enabling Lob's sales, finance, and customer success teams to manage the full quote-to-revenue lifecycle within the Salesforce environment. The integration supported complex subscription models, contract modifications, and real-time revenue insights for a growing customer base.

Roles and Responsibilities

- Developed and maintained Salesforce customizations to support Lob's subscription and billing workflows integrated with **Subskribe**, a cloud-native quote-to-revenue platform.
- Built Apex-based integrations to synchronize customer, product, quote, and billing data between **Salesforce** and **Subskribe** via RESTful APIs.
- Created custom Lightning Web Components (LWC) to provide sales and finance teams with real-time visibility into Subskribe subscription data directly within Salesforce.
- Designed scalable data models and implemented automation using **Flows, Apex Triggers, and Platform Events** to handle changes in Subskribe billing status and contract terms.
- Collaborated with Subskribe implementation consultants and internal stakeholders to refine data mappings and ensure end-to-end process integrity.
- Developed secure authentication mechanisms for integration using Named Credentials and custom settings.
- Led efforts to unit test and deploy integration logic using Salesforce DX and source control (Git).

Client: Discount Tire, Scottsdale, AZ

April 2022 – February 2025

Role: Salesforce Lead Developer

Project Details:

The project focused on integrating Salesforce Service Cloud with Riskconnect, a leading risk management platform, for Discount Tire. The goal was to enhance enterprise-wide visibility into risk events, streamline incident and claims management processes, and enable secure, real-time data exchange between systems. This integration ensured operational efficiency, reduced manual effort, and improved compliance through automated workflows, data synchronization, and centralized reporting.

Roles and Responsibilities

- Led the integration of Salesforce with Riskconnect to streamline risk management, incident reporting, and claims tracking across business units.
- Designed and implemented data flow between Salesforce and Riskconnect using REST APIs.
- Collaborated with business stakeholders and Riskconnect SMEs to gather integration requirements and map data models across platforms.
- Developed Apex classes, triggers, and custom REST endpoints to enable seamless data sync between systems.
- Ensured data security and compliance by implementing role-based access controls and secure API authentication (OAuth 2.0).
- Supported UAT, defect resolution, and deployment to production environments, ensuring minimal downtime and robust integration performance.

Client: Frontier Internet, Dallas, TX

October 2018 - April 2022

Role: Senior Salesforce Developer

Project Details:

The Salesforce CPQ implementation project focused on streamlining and automating the organization's quote-to-cash process by replacing legacy tools with a scalable, cloud-based solution. It aimed to improve sales efficiency, reduce manual errors, and enforce complex pricing and discounting logic while ensuring compliance with financial and legal standards. The scope included end-to-end design and deployment of Salesforce CPQ, configuration of dynamic product catalogues, bundles, discount structures, and approval workflows, as well as real-time integration with ERP systems like SAP and NetSuite. Custom quote document generation, role-based interfaces, and advanced approval automation were also implemented. The project resulted in faster quote turnaround times, enhanced data accuracy, and better alignment between Sales and Finance, ultimately enhancing the overall customer experience and driving productivity.

Roles and Responsibilities

- **Led the end-to-end Salesforce CPQ implementation**, partnering with Sales and Finance stakeholders to gather requirements, document quoting challenges, and define pricing models, approval workflows, and product catalog structures.
- **Configured CPQ components** including Products, Price Books, Bundles, Product Rules, Discount Schedules, and Advanced Approvals to streamline quoting and enforce complex business logic.
- **Developed custom Quote Templates** with dynamic fields to support branding, legal compliance, and enhanced customer communication.
- **Engineered custom solutions** using **Apex**, **Lightning Web Components (LWC)**, and **flows** to improve the Quote Line Editor UI, automate pricing logic, and manage dynamic, multi-level approval workflows.
- **Integrated Salesforce CPQ with ERP platforms** like **SAP** and **NetSuite**, enabling real-time pricing and inventory validation across systems.
- **Led testing efforts**, including Unit Testing, System Integration Testing (SIT), and User Acceptance Testing (UAT), ensuring accuracy in pricing logic, approvals, and document automation.
- **Deployed CPQ configurations and code** via Change Sets and **Salesforce DX**, maintaining deployment integrity across sandbox and production environments.
- **Delivered role-based training sessions** for Sales Reps, Finance users, and Admins, and authored detailed user guides and support documentation to drive successful adoption.
- **Provided post-go-live support**, monitoring system performance, resolving critical issues, and implementing iterative enhancements based on end-user feedback.

Client: American Public Education, Charles Town, VA

January 2016 – October 2018

Role: Senior Salesforce Developer

Project Details:

Campus360 is a unified CRM solution developed for American Public Education to modernize and streamline student engagement across the academic lifecycle. Built on **Salesforce Industries (Vlocity)**, the platform integrates core CRM features with **OmniStudio components** such as **FlexCards**, **OmniScripts**, and **Data Raptors** to automate complex educational workflows — including **enrollment**, **advising**, **financial aid**, and **case management**. The solution leveraged **Lightning Web Components (LWC)** for an enhanced user experience and real-time data visualization. Seamless system integration was achieved through **MuleSoft** and **Apex-based REST/SOAP APIs**. Delivered within an Agile framework, Campus360 significantly boosted service delivery, operational efficiency, and digital experiences for both staff and students.

Roles and Responsibilities

- Designed and configured **Vlocity components (FlexCards, Layouts, Data Raptors)**, integrated with **OmniScripts** to deliver streamlined, end-to-end business processes.
- Customized **standard and custom Salesforce objects** to support complex business workflows and maintain regulatory compliance.
- Developed **custom components** using **Apex, Visualforce, Lightning Components, and Lightning Web Components (LWC)** for responsive and dynamic user interfaces.
- Created **Apex callouts** for REST and SOAP API interactions, including integrations with third-party verification and financial services.
- Integrated Salesforce with external systems using **MuleSoft flows**, enabling bidirectional communication via **Apex classes** and **Salesforce endpoints**.
- Adhered to **Salesforce and Vlocity best practices** to ensure optimal performance and scalability of the solution.
- Used **Data Loader** for bulk data operations (insert, update, delete, export) across different Salesforce environments.
- Maintained high **code quality** through unit testing and peer code reviews.
- Participated actively in **Agile ceremonies** (daily stand-ups, sprint planning, backlog grooming, retrospectives).
- Supported deployment activities using **change sets** and **version control tools**, ensuring smooth release cycles across development, QA, UAT, and production.
- Provided **post-implementation support**, resolving issues and delivering enhancements based on ongoing feedback.

Client: HSBC Software Development, Hyderabad, India

February 2011 - January 2016

Role: Full Stack Developer

Project Details:

The project focused on developing a secure and scalable web application to streamline internal banking operations, including customer account management, transaction processing, and reporting. The goal was to replace legacy systems with a modern, user-friendly solution that could integrate seamlessly with other enterprise applications.

Roles and Responsibilities

- Assisted in developing web applications using **Java, Spring Boot, and Hibernate** under the guidance of senior developers.
- Contributed to the creation of RESTful APIs and microservices to support internal systems.
- Supported front-end development using **HTML, CSS, JavaScript**, and frameworks like **Angular** and **React**.
- Wrote and maintained SQL queries for **MySQL** and **DB2** databases; gained exposure to **MongoDB**.
- Participated in code reviews, sprint planning, and team stand-ups as part of the agile development process.
- Used **Git** for version control and learned best practices in collaborative development.
- Wrote basic unit tests using **JUnit** and **Mockito** to support code quality and application stability.
- Worked closely with QA and senior team members to debug and resolve software issues.
- Followed established security practices for user authentication and data handling.
- Gained exposure to cloud deployment environments such as **AWS** and **Azure**, and assisted in CI/CD processes with **Jenkins** and **Docker**.

Client: Four-Soft Ltd, India

April 2007 – February 2011

Role: Full Stack Developer

Project Details:

HUB Access was an enterprise logistics and supply chain management platform built on the IBM AS400 system. It supported core business operations including shipment tracking, warehouse management, and partner integrations. The application required high availability, secure data handling, and seamless communication with external systems.

Roles and Responsibilities

- Developed and maintained enterprise applications on **IBM AS400** using **RPG IV, RPGLE, CL, and DB2/400**.
- Translated **business requirements** into efficient, scalable technical solutions tailored to high-volume transactional systems.
- Designed and optimized **batch jobs, interactive programs, and custom reports** to enhance operational performance.
- Provided **24x7 production support**, including **troubleshooting, debugging**, and resolving system issues with minimal downtime.
- Engineered and maintained **physical and logical files** in **DB2/400**, improving query performance and data integrity.
- Integrated AS400 applications with external systems through **APIs, flat file transfers, and FTP/SFTP** protocols.

- Collaborated with **business analysts, QA teams**, and stakeholders to deliver critical enhancements and new features.
- Authored and maintained comprehensive **technical documentation**, including design specs and operational procedures.
- Refined overall **system and database performance** by fine-tuning **SQL queries** and optimizing file structures.

EDUCATION

Bachelor of Technology in Computer Science & Engineering from JNTU in 2006.
