Professional Summary

Full Stack Software Engineer with strong experience in building scalable enterprise applications using Java 17, Spring Boot 3, React 18, Redux Toolkit, AWS, Docker, Kubernetes, Kafka, PostgreSQL, and microservices. Skilled in designing distributed systems, implementing event-driven workflows, developing clean and modular front-end UIs, and automating deployments through modern CI/CD pipelines. Experienced in translating business requirements into technical solutions, documenting system flows, collaborating across engineering teams, and continuously improving system performance through innovation and automation. Experienced in technical writing, preparing reports, conducting tests and inspections, evaluating emerging technologies, and contributing to the technology roadmap while demonstrating strong technical leadership in cross-functional engineering projects.

Technical Skills

Languages: Java, JavaScript (ES6+), Python

Frontend: React 18, Redux Toolkit, Next.js, TypeScript, Tailwind CSS, Bootstrap, Webpack, Babel

Backend: Java 17, Spring Boot 3, Spring Security, Hibernate 6, Node.js, Express.js, REST APIs, GraphQL

Cloud: AWS (EC2, S3, Lambda, EKS, ECS, API Gateway), GCP (Cloud RUN, Pub/Sub), Firebase

DevOps: Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, CI/CD Pipelines, Linux

Data & Messaging: PostgreSQL, MongoDB, MySQL, Redis, Kafka, RabbitMQ

Testing: JUnit 5, Mockito, Cypress, Jest, Selenium, Cucumber BDD, Postman

Tools: Git, GitHub, GitLab, Jira, Confluence, Swagger/OpenAPI

Soft Skills: Technical Leadership, Team Leadership & Mentoring, Cross-functional Collaboration, Communication & Documentation, Problem Solving & Critical Thinking, Innovation & Continuous Improvement

Work Experience

Voulay LLC | Software Engineer | Keller, TX

Sep 2025 – Present

- Designed distributed microservices using Spring Boot 3, Java 17, Hibernate 6, Kafka, Docker, and AWS EKS while developing scalable backend services that improved transactional throughput and reduced latency across multiple processing pipelines, increasing system performance by 38%.
- Built responsive UI features using React 18, Redux Toolkit, Tailwind CSS, and TypeScript, developing dynamic product listing modules and improving overall user experience and navigation flow, boosting user task completion by 41%.
- Integrated ChatGPT and Claude large language models into workflow automation, developing auto-mapping logic for screen transitions and reducing manual rework through intelligent UI transformation pipelines, cutting review time by 63%.
- Implemented secure authentication using Spring Security, OAuth2.0, JWT, and API Gateway patterns while developing multi-layer authorization flows to protect user and order data, increasing security compliance by 47%.
- Engineered event-driven workflows using Kafka producers, consumers, Redis caching, and asynchronous orchestration, developing reliable message pipelines that improved consistency and fault tolerance, reducing processing delays by 34%.
- Developed CI/CD pipelines using Jenkins, Docker, Terraform, and GitHub Actions and automated build-test-deploy cycles, reducing release time by nearly 40% and deployment failures by 55%.
- Optimized SQL queries, Spring Data operations, and PostgreSQL indexing strategies while developing performance enhancements that improved API response times under heavy load by 32%.
- Collaborated with product and engineering teams to refine system designs, developing backend and frontend integration patterns aligned with modern architectural principles, improving delivery speed by 28%.
- Documented APIs, system flows, deployment diagrams, and integration contracts using Swagger/OpenAPI and Confluence, ensuring clarity for cross-functional teams and reducing onboarding time by 35%.
- Analyzed production logs with ELK stack and implemented diagnostic improvements while developing long-term reliability enhancements and proactive monitoring systems, reducing incidents by 42%.
- Prepared technical reports and architecture documentation, improving engineering clarity and cross-team alignment.
- Evaluated emerging technologies and contributed insights to the technology roadmap, strengthening long-term system strategy.

Bright Sparks | Software Engineer Intern | Cupertino, CA**Jun 2025 – Aug 2025**

- Developed front-end dashboards using React 18, Next.js, Redux Toolkit, and Firebase while building learning analytics interfaces that significantly improved engagement metrics, increasing student interaction by 52%.
- Improved rendering performance using SSR, dynamic imports, and route-level code splitting while developing optimized UI workflows that reduced first-load time by 45%.
- Integrated Firebase Authentication with modular TypeScript components while developing secure login and onboarding flows across student, instructor, and admin experiences, reducing authentication issues by 33%.
- Automated build pipelines using Jenkins, Docker, and GitHub Actions, developing consistent deployment cycles across QA and production environments, improving deployment success by 49%.
- Developed reusable UI components using React Hooks, Tailwind CSS, and Context API while improving maintainability and visual consistency across the application, reducing duplicate UI code by 37%.
- Enhanced code reliability with Cypress, Jest, and React Testing Library while developing automated test suites that prevented UI regression issues, lowering UI defects by 44%.
- Implemented serverless backend logic using Firebase Cloud Functions and GCP services while developing event-triggered actions for real-time learning updates, reducing backend compute overhead by 29%.
- Documented UI components, data flows, and API mappings using Confluence while improving onboarding clarity for engineering teams, reducing onboarding time by 31%.
- Worked with design and product teams to refine system behavior, developing user-friendly interfaces through iterative design improvements, increasing UX satisfaction by 26%.
- Improved accessibility and performance by implementing modern React optimization patterns and ensuring WCAG-compliant UI behavior, improving accessibility compliance by 33%.
- Executed comprehensive UI tests and inspections using Cypress and Jest, improving reliability and reducing defects.
- Authored technical documentation and component specifications, supporting design and engineering teams.

Clark University | Java Developer | Graduate Research Assistant**Aug 2024 – May 2025**

- Developed a Canvas-style academic platform using Spring Boot 3, Spring MVC, PostgreSQL, and React 18 while building real-time collaboration tools for student-faculty interaction, increasing engagement by 46%.
- Implemented secure authentication using Spring Security, OAuth2.0, and JWT while developing access control layers for academic data and user roles, improving authorization accuracy by 51%.
- Built student and admin dashboards using React Hooks, Tailwind CSS, and modular routing while improving usability and workflow navigation, reducing navigation time by 33%.
- Developed REST APIs for grading, comments, and course material distribution using Java 17 and MVC-based design patterns, reducing manual grading work by 39%.
- Integrated a collaborative whiteboard using Canvas API and JavaScript while developing real-time drawing and note-sharing capabilities, increasing feature usage by 42%.
- Enhanced backend efficiency with PostgreSQL indexing, optimized queries, and Spring Data improvements while developing performance enhancements, improving response time by 36%.
- Refactored backend logic into modular, microservice-ready components while improving maintainability and scalability, reducing tech debt by 31%.
- Mentored undergraduate students in Java, Spring Boot, React, Git, and system design while developing internal training resources, improving team output by 29%.
- Created system diagrams, sequence flows, ERDs, and technical documentation using Confluence while improving documentation quality and engineering onboarding, reducing clarification requests by 34%.
- Implemented testing automation using JUnit, Mockito, Cypress, and Postman while developing stable CI-ready test suites, increasing release quality by 45%.
- Prepared system diagrams, verification reports, and technical documentation, improving onboarding efficiency.
- Led student developers, providing technical leadership and code quality guidance.

Infosys | Systems Engineer | India**Jan 2022 – Aug 2023**

- Developed REST APIs using Spring Boot, React.js, and PostgreSQL while building insurance workflow automation features, reducing claims processing time by 27%.
- Optimized Hibernate ORM operations and PostgreSQL performance while developing scalable data access layers, reducing query execution time by 32%.

- Migrated monolithic systems to microservices using Docker, AWS EC2, and Spring Cloud while improving resilience and modular deployment, increasing uptime by 38%.
- Built UI components using React.js, JavaScript, HTML5, and CSS3 while improving screen responsiveness and user experience, reducing user task time by 35%.
- Created JUnit and Mockito test suites while developing automated testing workflows, lowering production defects by 41%.
- Collaborated with developers, architects, and QA teams using Jira and Git while supporting sprint-based delivery, reducing rollovers by 22%.
- Drafted requirement analyses, data flow reports, and review documentation for client review.
- Conducted structured regression testing, reducing issues before release.

HCL Technologies | Software Engineer | India

Aug 2019 – Dec 2021

- Developed REST APIs using Node.js, Express.js, and MongoDB while modernizing billing platforms, reducing processing delays by 31%.
- Built analytical dashboards using JavaScript, Bootstrap, and MongoDB while improving operational visibility, increasing reporting accuracy by 44%.
- Optimized API and query performance using Express.js middleware and Mongo Aggregation pipelines while improving response times by 36%.
- Developed CI/CD pipelines using Docker, Jenkins, and GitHub while improving deployment reliability, reducing deployment failures by 39%.
- Documented workflows, APIs, and release plans using Swagger and Confluence while improving team onboarding efficiency by 28%.
- Collaborated across QA, DevOps, and product teams while supporting major releases, increasing deployment success by 33%.
- Documented release plans and technical workflows, improving team coordination.
- Performed API testing and inspections, ensuring accuracy and stability of billing services.

Projects

Image Recognitive AWS Cloud Application

- Developed a web application for image recognition using Spring REST and deep learning AMI provided by AWS.
- Implemented a load balancer to ensure the application's elasticity by automatically scaling out and in OnDemand.

Book online store- e-Commerce website (Amplify IAppSync | Dynamo DB |S3 Lambda services in AWS| React Hooks| React.js Stripe)

- Architected a comprehensive online bookstore with features for browsing, adding to cart, and purchasing books.
- Used AppSync for CRUD operations and integrated Stripe for secure payment processing.

Education

Clark University, Worcester, MA

Aug 2023-May 2025

RVR & JC College of Engineering, Chowdavaram, India

July 2015-June 2019

Certifications

AWS Certified Developer – Associate (DVA-C02)

Dec 2024
