

Freddy Mwamba

Salt Lake City, Utah | 669-304-0666 | mwambafreddy365@gmail.com

Professional Summary.

- AWS Cloud Engineer professional, with 5+ years of experience, demonstrating knowledge and proficiency with AWS services and cloud best practices.
- Proven track record in optimization of different cloud costs, through resource management and implementation of cost-effective solutions.
- Expert-level knowledge of Amazon EC2, S3, VPC, RDS, Elastic Load Balancing, Autoscaling, IAM, Security Groups, Cloud Watch, and other AWS services.
- Experience working on version control system tools such as GIT and proficient leveraging infrastructure as Code using Terraform and its various dependencies.
- Well versed in configuration management and automation using services like AWS Systems Manager and Ansible to automate operational tasks and reduce management overhead.
- Leveraged monitoring tools such as Cloud Watch, CloudTrail, AWS Config & Amazon Event Bridge all with the aim of keeping the environment safe and robust.
- Proven ability to design and deploy scalable, secure, and high-performance cloud architectures tailored to diverse client needs.

Skills.

- ❖ **Security:** AWS Guard Duty, AWS Security Hub, Security Groups, NACLs, AWS Shield, AWS Secret Manager, Identity and Access Management (IAM), Encryption.
- ❖ **Cloud Orchestration and Automation:** Terraform, Ansible, AWS Systems Manager.
- ❖ **Networking:** VPC, Subnets, Load Balancers, Route Tables, Internet gateways, Transit gateways, AWS Route 53, VPC Endpoints.
- ❖ **Monitoring and Event Management:** AWS CloudWatch, AWS CloudTrail, VPC Flow Logs, AWS Config, AWS Trusted Advisor, SNS Notifications, AWS Access Analyzer, Amazon Event Bridge
- ❖ **Storage:** S3, Databases, EBS, EFS.
- ❖ **Cost Optimization:** AWS Cost Explorer, AWS Budgets, Instance Scheduler, Auto Scaling Groups, Instance Types, S3 Bucket Types.
- ❖ **Programming Languages:** HTML, PYTHON, CSS, Bash, JSON, PowerShell, AWS CLI, Linux.

Education.

- ❖ **Ensign College** | Salt Lake City, Utah | **Information Technology**
- ❖ **Institute Supérieur Song-Hwa - Kinshasa** | Kinshasa Congo | **BSC In Public Health** |

Professional Experience.

doTERRA International | Pleasant Grove, UT
AWS Cloud Engineer

Sept 2022 - Current

- ❖ Designed roles and groups for users and different resources, using AWS Identity Access Management [IAM].
- ❖ Took lead on troubleshooting and supporting most of the AWS services, including but not limited to services such as Security Groups, Nacls, Networking Configurations, Route editing and more.
- ❖ Monitored infrastructure and applications using Cloud watch, Cloud Trail, AWS Config, Amazon Event bridge.
- ❖ Configured automated backups to ensure business continuity using snapshots and the AWS Back-up Service configuring Back Up plans to automate this process.
- ❖ Implemented security best practices, including MFA set-up, role-based permissions, ensuring compliance and zero security breaches, using services like Amazon Guard Duty and SNS notifications.
- ❖ Set up and implemented AWS Organizations to centrally manage multiple AWS accounts including consolidated billing and policy-based restrictions.
- ❖ Demonstrated automation through Infrastructure as a code to increase build efficiency in the cloud.
- ❖ Assists in defining, provisioning and managing Amazon Web Services (AWS) cloud environments.
- ❖ Develop and implement solutions to automate manual tasks, enhancing operational efficiency and reducing the risk of errors across various workflows.

Supply Chain Solution | Lindon, UT
AWS Cloud Engineer

Aug 2020 - Sep 2022

- ❖ Used Terraform to provision infrastructure in the cloud and have a back-up of those infrastructures in the form of code & stored in an S3 bucket as a disaster recovery strategy.
- ❖ Led cost optimization programs that reduced AWS Infrastructure cost, whilst improving performance and agility.
- ❖ Collaborated with cross functional teams to design, deploy, and manage cloud-based infrastructure and services, ensuring optimal performance, security, and scalability.
- ❖ Managed users and resources in AWS, developing cloud-agnostic policies and tools while educating application teams on the benefits of each cloud environment
- ❖ Worked hand in hand with management, stakeholders, in determining, planning, implementing and the integration of system-oriented projects in our environment.
- ❖ Isolated different environments using firewalls such as AWS WAF at the Load Balancer level, Security Groups for resources and Nacls at the subnet level.
- ❖ Designed highly available infrastructure using load balancers and auto scaling for web servers integrated with cloud watch alarms to automatically scale in and out servers, when necessary, all in an aim to increase performance.
