

CHRISTOPHER TIQUI

SKILLS

Server-Side Development

Python · Django · FastAPI · Flask · Go ·
Node.js · Express.js · GraphQL ·
Web Sockets · AJAX · RESTful APIs ·
PostgreSQL · MySQL · MongoDB · Redis ·
Puppeteer · Selenium · Apache Kafka ·
RabbitMQ · Elastic Search · Docker ·
Kubernetes · Terraform · Microservices ·
Serverless Architecture

Client-Side Development

JavaScript · TypeScript · HTML · CSS ·
React · Redux · React Native · NextJS ·
Angular · Storybook · SCSS · Material UI ·
Jest · Cypress · Mocha · Chai

Cloud Technologies

AWS Lambda · AWS EC2 · AWS S3 ·
DynamoDB · SNS · SQS · CloudWatch ·
AWS Amplify · AWS CloudFormation ·
API Gateway · AWS ECS Fargate ·
Amazon EKS · AWS CodePipeline ·
Google Compute Engine · Cloud SQL ·
Google App Engine · Cloud Pub/Sub

Version Control and CI/CD

Git · GitHub · GitLab · Bitbucket · Jira ·
Jenkins · CircleCI · Travis CI · TeamCity

EDUCATION

Bachelor of Computer Science

Florida Atlantic University
01/2009 - 05/2013

CERTIFICATION

Cisco Certified Ethical Hacker

Issued by Cisco Systems in 2018

Senior Software Engineer

☎ (210) 817-2748 @ christiqui63@gmail.com

SUMMARY

Seasoned Software Engineer with more than 12 years of experience in building scalable web applications and backend services using **Python**, **Go**, **JavaScript**, and **TypeScript**. Expertise in designing RESTful APIs, cloud architectures (AWS), and microservices. Skilled in optimizing performance, ensuring security, and leading teams to deliver high-quality software solutions. I have turned complex business needs into robust technical solutions, enhancing performance and customer satisfaction in various sectors from healthcare startups to large-scale financial firms.

EXPERIENCE

Senior Software Engineer

07/2022 - 03/2025

CenterEdge Software

- Spearheaded a team of 5 engineers, successfully leading and executing 6+ projects, utilizing **Python**, **Go**, and **TypeScript** to enhance and maintain the company's core software products.
- Directed a team to upscale a large-scale B2B SaaS platform using a **microservices** architecture with **Django** and **React**, achieving a 30% performance optimization and implementing over 10 new features.
- Developed an efficient **Go** middleware engine incorporating **Apache Kafka** for real-time messaging, which seamlessly integrates responses from 8 distinct third-party APIs seamlessly.
- Led the design and launch of third-party API management platform using **Next.js**, setting a new project standard within a tight 2-month timeframe.
- Designed and implemented over 20 database objects, including **stored procedures**, **functions**, **triggers**, and **indexes**, using **PostgreSQL** to enhance the efficiency of the database system.
- Involved in the development and configuration of 10+ **Docker** containers, using **Helm** and **Kubernetes** for deployment, leading to 35% decrease in setup time.
- Adopted a high-performance, low-latency data analytics API query layer capable of processing extensive datasets, using technologies such as **GraphQL**, **API Gateway**, **AWS Lambda**, **AWS S3**, and **AWS DynamoDB**.
- Transformed over 100 client requirements into actionable technical user stories for the development team through effective collaboration and communication with the product manager and consultants.
- Managed and improved code quality through code reviews, pair programming, and implementation of unit test practices, resulting in over 90% test coverage rate across over 4 projects, as measured by **SonarQube**.

Founding Software Engineer / Team Lead

10/2017 - 06/2022

Forward

- Contributed to the significant growth of a Series A HealthTech startup valued at 10M, leading to a Series D round with a valuation of 225M, by leading a team of 4 software engineers and leveraging **Python** and **TypeScript**.
- Leveraged **AWS** technologies including Lambda, DynamoDB, SQS, SNS, and more to develop a serverless architecture for the back-end, while utilizing HTML5, CSS3, TypeScript, and **React** for front-end creation of an admin panel.
- Architected a high-quality MVP of a SaaS platform using **FastAPI**, **React**, and **Redux**, successfully delivering within a tight 6-month timeframe.
- Led the successful transition and expansion of an MVP from **FastAPI** to **Django** to enhance scalability and performance.
- Contributed to the development of secure backend APIs, specializing in user authentication and authorization, by incorporating Single Sign-On (**SSO**) best practices reinforcing security protocols and enhance user experience.
- Utilized **Python** libraries such as TensorFlow and Scikit-learn to aid in the building of an AI/ML pipeline for classifying medical video clips and annotating metadata, leveraging data extracted from a large-scale **SQL** database.
- Increased system monitoring efficiency by 25% by designing and implementing custom dashboards in **Datadog** with aggregated metrics and charts, leading to more precise and timely decision-making based on Datadog reports.
- Collaborated with a team of 12 professionals including data scientists, testers, UI/UX designers, and business specialists to deliver client-centric solutions.
- Transitioned the team from Waterfall to **Agile Scrum** Methodology, managing tasks and bugs through **Jira** and **Git**, facilitating sprint planning, and overseeing TeamCity builds and SonarQube analytics.

PROJECTS

EdgeManage

CenterEdge Software

EdgeManage is a B2B SaaS platform serving the leisure industry. It offers solutions for ticketing, event booking, CRM, and inventory management, paired with advanced analytics for business enhancement.

EdgeInterface

CenterEdge Software

EdgeInterface is an sophisticated API management platform. It eases the integration and handling of multiple third-party APIs that the company's software products rely on.

HealFromHome

Forward

HealFromHome is a telemedicine platform offering secure and easy-to-use online healthcare. It features video consultations, digital prescriptions, an AI symptom check, secure messaging, and a health monitoring dashboard.

EXPERIENCE

Software Developer

07/2013 - 09/2017

GlobalLogic

- Successfully delivered over 6 diverse projects, ranging from E-commerce to sports betting platforms using **JavaScript**, **Python**, and **Go** frameworks including React, Angular, Node.js, and Django, with 100% timeline adherence.
- Converted 60+ mockup designs into pixel-perfect, responsive web front-end pages, utilizing **React** and **Material UI**, enhancing user experience across multiple platforms.
- Solely designed and developed a comprehensive web application for a large maker space, integrating class scheduling, building access, machine permissions, and membership options using **Django**, **Riot.js**, and **PostgreSQL**.
- Developed a robust financial transaction management platform utilizing **Angular**, **Node.js**, **MySQL**, and **Sequelize**, streamlining financial operations and enhancing data accuracy.
- Contributed to pure Microsoft SQL Server-based development between SAP and other web applications. All logic is written in **SQL**, processing IDOC XML files and managing **JSON** communication from SQL Agent jobs.
- Built an SMPP server from scratch with internal business logic using **Golang**, **RabbitMQ**, and **Redis** for communication between microservices.
- Streamlined workflow by introducing **JavaScript** task automation tools like NPM, Webpack, Yarn, Gulp, and Grunt, automating repetitive tasks and increasing productivity by 25%.
- Re-engineered a video ingestion system into a web service using **Go**, Gorilla, and **MongoDB**, while enhancing its front-end through JavaScript and AngularJS.
- Efficiently managed and tracked bugs and tasks using **Jira** (Confluence) and **Git**, while overseeing TeamCity builds, releases, and deployment chains, including review of **SonarQube** statistics for comprehensive project oversight.
