PROFESSIONAL SUMMARY

- Experienced **Full-Stack Java Developer** with 4+ years of expertise in designing, developing, and deploying scalable web applications and microservices.
- Proficient in **Java (8/11/17)** and Spring Framework, including **Spring Boot, Spring MVC, and Spring Security**, with extensive experience in **RESTful APIs** and **microservices** architecture.
- Expertise in developing secure, high-performance applications for financial services using technologies such as **JWT, OAuth2, and Spring Security**.
- Strong background in database optimization, with hands-on experience in **SQL (MySQL, PostgreSQL)** and **NoSQL (MongoDB)**, utilizing **Hibernate** and **JPA** for data mapping and ensuring efficiency in data processing.
- Built and deployed event-driven microservices using **Kafka** and integrated Apache Kafka for real-time data streams, ensuring high throughput in financial systems.
- Applied cloud-native solutions with AWS services (**EC2, RDS, S3**), enabling scalable, fault-tolerant applications with automatic scaling and load balancing.
- Implemented CI/CD pipelines using **Jenkins, Docker, and Kubernetes** to streamline build, test, and deployment processes, enhancing operational efficiency.
- Experienced in front-end development using **React.js** and **Angular 12+**, integrating with back-end services to create dynamic, responsive user interfaces.
- Strong advocate of **Agile** methodologies, with active participation in sprint planning, code reviews, and retrospectives to deliver high-quality solutions aligned with business goals.
- Committed to continuous learning, staying up-to-date with emerging technologies and best practices to build innovative solutions that meet business goals.

PROFESSIONAL EXPERIENCE

First Bank

Aug 2024 - Present

Full-stack Java Developer

- Engineered high-performance microservices using Java 17, Spring Boot, and Kafka, optimizing real-time transaction processing speed by 40%, enhancing digital banking and online payment capabilities.
- Revamped RESTful APIs for personal and business banking services, reducing response times by 35%, improving online banking experiences for 1M+ customers.
- Built event sourcing for account balances using Kafka Streams, enabling real-time fraud detection.
- Implemented Spring Security with JWT and OAuth2, fortifying authentication mechanisms and ensuring 100% compliance with banking security standards.
- Streamlined data mapping for complex financial transactions using Hibernate and JPA, improving query execution speed by 30%.
- Designed a cloud-based architecture using AWS (EC2, RDS, S3), ensuring auto-scaling and high availability for financial applications handling \$500M+ in daily transactions.
- Optimize SQL queries and stored procedures in MySQL, boosting transaction processing speed by 35%, critical for high-volume financial systems.
- Utilized Redis caching to enhance loan and wealth management data retrieval, reducing response times by 20% for financial advisors and customers accessing investment insights.
- Automated CI/CD pipelines with Jenkins and Docker, cutting deployment times by 50% and reducing production errors by 40%.
- Developed real-time fraud detection systems, detecting anomalies with 90% accuracy, safeguarding transactions and mitigating fraud risks.
- Automated batch jobs for loan approvals and deposits, reducing manual workload and speeding decisions by 30%.
- Collaborated with DevOps and SRE teams to implement blue-green deployment strategies, reducing downtime during major feature rollouts.
- Worked in Agile/Scrum environments, delivering high-priority financial features 10% faster through sprint planning and continuous integration.

Accenture

Oct 2020 - Dec 2022

Software Engineer

- Led Strangler Pattern migration of core banking monolith, incrementally replacing 12 modules with microservices.
- Optimized Hibernate and JPA queries, improving query execution times by 50% in mission-critical banking modules such as payments and account management.
- Designed and managed Amazon RDS instances to enhance database scalability and improve uptime by 25% for core banking services.
- Integrated ActiveMQ and RabbitMQ for async financial data processing, achieving 99.99% message delivery and robust fault tolerance.
- Leveraged Kubernetes for microservices orchestration, improving resource utilization by 40% and reducing infrastructure costs.
- Designed authentication mechanisms with OAuth2 and JWT, securing API endpoints and reducing unauthorized access attempts by 90%.

- Built a configurable rate-limiting service using Spring Cloud Gateway and Redis, throttling abusive traffic while maintaining 99.9% SLA for legitimate requests.
- Optimized data flow and processing pipelines by implementing Kafka Streams, reducing data latency by 30% and increasing data throughput across multiple microservices.
- Designed and optimized complex SQL queries with indexes and query optimization. Implemented database schema design and normalization for data integrity.
- Developed a custom API gateway aggregator pattern that reduced mobile client roundtrips by 60%
- Enabled high-availability disaster recovery by implementing multi-region failover strategies, ensuring 99.99% business continuity.
- Used Swagger and OpenAPI to auto-generate API documentation, reducing onboarding time for new developers by 50%.
- Implemented a centralized monitoring stack for 50+ microservices, reducing MTTR by 65%.

Genesis Solutions

May 2019 - Sep 2020

Java Developer

- Designed and implemented custom authentication and authorization using Spring Security, reducing unauthorized access by 40% for enterprise-grade ERP applications.
- Developed RESTful APIs with Spring Boot, reducing data retrieval latency by 35% for enterprise applications.
- Designed and deployed scalable Java-based web applications, ensuring 99.9% uptime and processing 1M+ transactions per month.
- Optimized JVM garbage collection for high-throughput payment services, reducing GC pauses by 65% and improving P99 latency.
- Applied Java design patterns (DAO, Singleton, Factory), improving code scalability and maintainability, and reducing code duplication by 30%.
- Implemented multi-threaded applications with Java concurrency utilities, improving system throughput by 30% for high-load financial processing.
- Deployed applications on Apache Tomcat and integrated with Oracle databases, ensuring seamless transaction processing.
- Automated CI/CD workflows using Jenkins, accelerating release cycles and reducing deployment failures by 45%.
- Refactored data processing logic using Java Streams and optimized collections, reducing memory consumption by 25%.
- Applied B-tree indexing on high-traffic financial tables, improving query response times by 40% in large-scale transactional systems.
- Integrated Angular-based single-page applications (SPAs) with back-end services, improving API response efficiency by 25%.
- Developed and maintained dynamic front-end components using Angular 11/12, improving UI responsiveness by 40% and reducing page load times.
- Improved backend API performance by optimizing data processing pipelines in Java, reducing latency by 20%.
- Introduced data validation layers in Java applications, improving data accuracy by 20% and reducing error rates in financial transactions.
- Conducted unit testing with JUnit, achieving 90%+ test coverage and reducing post-deployment defects by 50%.

TECHNICAL PROFICIENCY

- Java (8/11/17), SQL, Python, JavaScript (ES6), TypeScript, Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Apache Kafka, React.js, Angular 12+, HTML5, CSS3, JavaScript (ES6+), Redux, Node.js, AWS (EC2, RDS, S3), Docker, Kubernetes, MySQL, PostgreSQL, MongoDB, Redis, Jenkins, Maven, Git, Log4J, JUnit, Postman, Power BI, Jira, Confluence, Agile (Scrum), CI/CD, TDD, JWT, OAuth2, Kafka, Microservices Architecture, Event-driven Architecture, Payment Processing, PCI-DSS

Projects

Movie Ticket Booking

- Created a user-friendly, interactive web application for buying movie tickets, featuring seat selection, movie options, and location selection.
- Deployed the application using Elastic Beanstalk on AWS, ensuring scalability and reliable performance.
- Implemented a caching mechanism using Redis to optimize frequently accessed queries, reducing database load and improving page load speed by 40%.
- Connected the application to an Amazon RDS-hosted MySQL database, leading to a 25% reduction in query response times and faster data retrieval.
- Developed a smooth, secure Stripe payment interface, which improved payment dependability and reduced transaction failures by 30%.

Reducing Noise Based on Dynamic User Interests in Web Data

- Developed and implemented the Reduce Web Data Noise (RWDN) algorithm to filter irrelevant content based on dynamic user interests, improving content relevance.
- Utilized K-means clustering and time-series analysis to track and adapt to user behavior, leading to a 20% increase in engagement and a 25% reduction in bounce rate.
- Developed a real-time data pipeline using Kafka to handle high-velocity user interaction data, enabling continuous adaptation to evolving user preferences.
- Achieved 30% reduction in irrelevant content, enhancing the accuracy of content recommendations.
- Evaluated model performance using precision (85%) and recall (75%), ensuring effective noise reduction without losing valuable information.
- Integrated SQLite for efficient data storage and real-time querying of user interaction data.

EDUCATION

University of Missouri-Kansas City

Jan 2023 - Dec 2024

- GPA: 3.85

Gandhi Institute of Technology and Management

May 2016 - Jun 2020
