

Professional Experiences

Alliance Tek Solutions

QA Automation Engineer - Mount Sinai Hospital (Project) Jan 2023 - Present

- Actively involved in all stages of the SDLC and STLC processes within the Agile Scrum environment.
- Designed and developed a hybrid test automation framework from scratch for healthcare applications using Java, Selenium, Cucumber, Rest Assured, and JDBC.
- Applied Page Object Model (POM) design and Object-Oriented Programming (OOP) principles, resulting in a 30% improvement in test coverage.
- Implemented and executed BDD scenarios using the Gherkin language by creating and managing feature files and step definitions, ensuring comprehensive test coverage and reducing manual testing by 40%.
- Integrated Log4j for detailed logging of test execution and streamlined debugging.
- Performed database operations using APIs and SQL to ensure UI data matched the database records.
- Implemented Selenium synchronization for conditional and unconditional waits using implicit waits and explicit waits.
- Utilized Docker to set up Selenium Grid with one HUB and multiple nodes, enabling parallel test execution and significantly reducing test run times for larger suites.
- Configured Jenkins on AWS EC2 instance to run automation tests from GitHub, with test results stored in Amazon S3 bucket and monitoring handled through CloudWatch alerts.
- Used Jenkins for continuous integration and Maven for managing project builds, resulting in a 20% reduction in build and deployment times.
- Maintained a Traceability Matrix to ensure complete test coverage by mapping User Stories to Test Cases.
- Analyzed test results, created reports, and logged defects in JIRA.
- Engaged in code reviews to uphold quality standards and best practices, improving code quality and maintainability.

Alliance Tek Solutions

SDET/ QA Automation Engineer - CitiBank (Project)

Oct 2020 - Dec 2022

- Designed and built a robust automation framework in TestNG, integrating the Page Object Model (POM) design with Data-Driven Testing principles for enhanced maintainability and flexibility.
- Participated in Agile ceremonies, including sprint grooming, sprint planning, daily stand-ups, and retrospectives.
- Assessed and analyzed user stories, developed test scenarios, test cases, test data, and test reports.
- Formulated Selenium scripts for capturing screenshots and used the Actions class to perform mouse and keyboard events.
- Involved in writing test scripts using Java and executed them through Selenium WebDriver for functional and regression testing.
- Designed and implemented API testing frameworks using Rest Assured to validate and simulate system interactions.
- Validated secure payment systems, including ACH, RTP, and OCT payments.
- Conducted end-to-end testing of ACH payment transactions, batch processing.
- Performed comprehensive testing of RTP rails.
- Tested ACH exception handling scenarios.
- Used Postman for manually testing RESTful web services using POST, GET, PUT, and DELETE.
- Reduced build/deploy time by 90% by creating Jenkins scripts to automate code pulls from GIT and deploy to an AWS EC2 instance, with test results stored in S3 and CloudWatch used to monitor execution and send alerts on failures.
- Integrated automation scripts with Jenkins for continuous integration and delivery, enabling automatic execution after each successful deployment and scheduling nightly batch runs.
- Used Swagger to obtain REST API specifications and documentation.
- Developed and executed several SQL queries as part of backend testing, and was involved in data validation, verifying data integrity, and checking the data flow between different systems.
- Integrated Log4J into the automation framework to track test execution details, capture logs, and support efficient debugging.
- Used JIRA for bug tracking and reporting, followed up with the development team to verify bug fixes and update the bug status.

Alliance Tek Solutions

Manual Tester - Global HR Solutions (Project) Jun 2019 - Sept 2020

- Developed and executed manual tests to validate that the application met business requirements, identifying issues and anomalies during the testing phases.
- Executed manual tests on HR modules such as payroll, employee onboarding, performance management, and benefits administration.
- Conducted SQL database testing using queries in MySQL WorkBench to verify accurate data population in application tables.
- Tracked and managed defects using JIRA, analyzing and comparing issues to streamline resolution processes.
- Participated in project review meetings and daily/weekly status meetings with project managers and leads to ensure testing activities aligned with project goals.

Technical Skills

- Programming Languages: Java
- Test frameworks: Cucumber(BDD), TestNG(Data Driven Testing)
- Test Automation Tools: Selenium,Jenkins,Maven,Git,Docker,AWS
- API testing: RestAssured, Postman, Newman
- DataBases: JDBC, MySql WorkBench
- Test Management: JIRA, TestRail
- IDEs: IntelliJ IDEA, Eclipse

Education:

International Business College Mitrovica - IBCM (Associate's Degree)
Mitrovica, Kosovo, 2015

Certificates and Training :

Syntax Technologies - Virginia
Software Development Engineer in Test Bootcamp
