LINUX SYSTEM ENGINEER / DEVOPS

Linux System Engineer with DevOps expertise and over six years of experience designing, automating, and implementing solutions. Proven track record of mentoring and leading teams through project lifecycles. Exceptional communication skills, adept at collaborating with cross-functional teams and explaining technical concepts to non-technical stakeholders. Committed to continuous learning and staying current with emerging technologies to drive improvements and deliver innovative solutions. Known for problem-solving, adaptability, and a proactive approach to challenges.

EDUCATION

Bachelor of Science in Computer Science

Monroe College, BS, 2017

TECHNOLOGY STACK

- **Reporting Tools:** Jira, Rally, ServiceNow, Analysis Services
 - **Operating Systems:** Microsoft Windows, Red Hat, CentOS, Ubuntu Linux
 - **Management Tools:** Azure DevOps, Jira, Microsoft Project, Visio, ServiceNow, Red Hat Satellite
 - **Programming Languages:** C/C++, C#, Java, YAML, Groovy, Python, Bash
 - **Frameworks:** Spring MVC, Spring Boot
 - **Frontend Technologies:** Bootstrap, jQuery, AJAX, AngularJS, Node.JS, Responsive Web Design
 - **Cloud Technologies:** AWS, Azure, GCP, OpenStack, Rackspace, OCI, CloudFoundry
 - **Security:** Spring Security, OAuth, Active Directory, LDAP, SSL, SAML
 - **Databases:** MySQL, Oracle, MongoDB, Cassandra, CouchDB, DynamoDB, PostgreSQL, Teradata
 - **DevOps & Automation:** Terraform, Ansible, Jenkins, Docker, Kubernetes, Git/GitHub/GitLab, Ansible Tower, Puppet, Chef, SaltStack
-

SKILLS

- Fluent in English, Bengali, and Hindi (written & spoken)
 - Advanced understanding of B2B transactions & workflows
 - Time management & problem-solving abilities
 - Strong analytical and troubleshooting skills
-

PROFESSIONAL EXPERIENCE

Cigna (*Feb 2024 - Present*)

DevOps/Linux System Engineer

- Enhanced tooling with ACS Red Hat and Red Hat Quay.
 - Implemented CI/CD with Jenkins Pipelines and JFrog for artifact management.
 - Integrated Trivy for vulnerability scanning and secured Dockerized Spring Boot applications.
 - Automated server provisioning & configuration using Ansible roles and playbooks.
 - Deployed and managed Ansible Tower for enterprise automation.
 - Implemented Infrastructure as Code (IaC) using Terraform across AWS, Azure, and GCP.
 - Managed Kubernetes deployments using GitOps practices in GitLab.
 - Administered Red Hat Satellite for patch management and system lifecycle automation.
 - Developed an openrewrite framework to automate GitHub API search deployments.
 - Deployed and optimized virtualization with OpenStack, troubleshooting performance, storage, and networking issues.
 - Developed and maintained data pipelines using PySpark, Airflow, and Python frameworks.
 - Integrated FHIR and Smart-on-FHIR solutions for healthcare data standardization.
 - Secured Azure workloads using Azure Security Center and ensured compliance.
 - Monitored and optimized system performance with Azure Monitor, Log Analytics.
-

UnitedHealth Group (*June 2022 - Jan 2024*)

Software/Linux System Engineer

- Designed, deployed, and maintained RHEL & Ubuntu servers across VMware, bare metal, and cloud environments.
- Managed IT Change Requests, Incident, and Problem Management via ServiceNow.
- Automated deployments with Ansible, peer-reviewed shared GitHub repositories.

- Developed Bash/Python scripts for API calls and automation tasks.
 - Configured Apache Tomcat for various applications.
 - Implemented CI/CD pipelines in Azure DevOps for deployment automation.
 - Managed OpenStack-based virtualization, optimizing KVM/QEMU performance.
 - Conducted system audits, troubleshooting performance issues (CPU, Memory, I/O, Networking).
 - Migrated a monolithic application to a microservices-based Spring Boot system.
 - Led cloud migrations and infrastructure optimizations, ensuring 99.9% uptime.
-

Fiat Chrysler Automobiles (*March 2018 - June 2022*)

Automation Test Engineer

- Developed automation solutions for vulnerability remediation in Spring Boot applications.
 - Designed migration utilities for Zephyr Enterprise.
 - Automated B2B integration testing, leveraging Java, Groovy, Selenium.
 - Performed API and vehicle function testing, including HIL, MIL, SIL methodologies.
 - Developed automated scripts and test cases using Java, Cucumber, JUnit, Selenium.
 - Configured and maintained KVM virtualization with OpenStack, reducing provisioning time by 30%.
 - Migrated physical servers to KVM/QEMU virtualized environments.
 - Created and optimized CI/CD pipelines with Gradle and Maven.
 - Participated in Agile Scrum cycles, executing sprint reviews and retrospectives.
 - Maintained and analyzed defect tracking reports in JIRA.
-

PROJECT HIGHLIGHTS

- Developed automated GitHub API search deployments using OpenRewrite.
- Led migration of 200+ virtual machines to OpenStack KVM/QEMU.
- Enhanced healthcare data integration with FHIR and Smart-on-FHIR.
- Improved cloud security compliance with Azure Security Center.
- Reduced cloud infrastructure costs through Terraform automation.
