

Sai Manikanta

Java Full Stack Developer

2016879410

saikanamarlapudi7@gmail.com

PROFESSIONAL SUMMARY:

- Over 8+ years of experience in the design, development, and implementation of **Object-Oriented applications, Intranet, Internet, and Java/J2EE-based enterprise solutions**. Extensive expertise in designing, analyzing, and developing enterprise solutions in Agile environments using **Java/J2EE technologies**, with domain experience in **Banking, Healthcare, and eCommerce**."
- Experience in understanding and gathering **Business Requirements** , translating them into Functional specifications and develop code along with detailed design.
- Good experience working with different Software methodologies (SDLC) like **Agile Scrum , Agile XP, Agile Kanban and Waterfall Model**.
- Expertise in developing applications using Core Java Concepts like **OOPS, MultiThreading, Garbage Collections, Collection** etc.
- Experience in using and implementing **Design Patterns** such as Model-View-Control (MVC), Data Access Object (DAO), Service Locator Factory and Singleton & Business Delegate.
- Well Experienced in designing and developing n-Tier applications **using Java ,Servlets, JSP,JDBC, Java Script JSON, JQuery, SOAP , Restful WebServices, Ajax ,XML**.
- Hands on experience in building applications using various technologies like **Spring, Hibernate, iBatis and JPA**.
- Strong experience on **Spring Frameworks** including Spring MVC, Spring Boot, Spring Security, Spring Webflow, Spring Eureka, Spring Cloud, Spring Batch and Spring Data.
- Well Experience in **service Oriented Architecture (SOA) and MVC Architecture**.
- Expertise in implementing **Spring Boot** Microservices and Java frameworks/libraries and **Cloud API development**.
- Strong expertise in implementing **Spring Boot Microservices, Java frameworks/libraries**, and **Cloud API** development to efficiently divide applications into various sub-modules.
- Skilled in developing reactive web services using **Spring WebFlux** with Flux and Mono, enabling asynchronous processing and enhancing system performance.
- Experienced in **Debugging , Performance tuning and Code Optimization**.
- Extensive experience in **Hibernate** and in using **Hibernate** Connection Pooling, **HQL, Collections, Hibernate Caching, Hibernate Transactions**, and **Optimistic**.
- Expertise in in geospatial concepts and technologies, including **Geographic Information Systems (GIS), spatial databases** (e.g., PostgreSQL/PostGIS, MongoDB), and **mapping APIs** (e.g., Google Maps API, Mapbox).
- Experience on Cloud Technologies like **Amazon Web Services (AWS), Google Cloud Platform (GCP) and Azure**.
- Good Experience in development of Unit Test Cases of **JUNIT**.
- Expertise in containerization technologies like **Docker and Kubernetes**, along with **OpenShift** for managing and orchestrating containerized applications.
- Experience in client scripting languages and server scripting languages like **HTML5, CSS3, Bootstrap, Ajax, and jQuery, JavaScript, Angular 14/13/12/11/5/4, ReactJS and NodeJS**.
- Experience in using **POSTMAN and SOAP UI** to test Restful web service endpoints and performed operations to get, post, and update and delete data.
- Willing to learn and adapt to new technologies.

TECHNICAL SKILLS:

Languages	Java 17/11/8/7, JavaScript, XML
Java Frameworks	Spring (Spring MVC, Spring Boot, Spring Security, Spring Web flow, Spring Cloud, Spring Eureka, Spring Batch, Spring Data), Hibernate, iBatis, JPA
Cloud Environment	Amazon Web Services (AWS), Google Cloud Services and Microsoft Azure
Web Technologies	HTML5, CSS3, Bootstrap, Ajax, jQuery, JavaScript, Angular 14/5/4, ReactJS, NodeJS, ExpressJS
IDEs	Spring Tool Suite (STS), Eclipse, NetBeans, IntelliJ
Build Tools/CI-CD Tools	Maven, Ant, Gradle, Jenkins
Orchestration Tools	Docker, Kubernetes
Web Services	REST and SOAP Web Services
Databases	Oracle, MySQL, SQL Server, PostgreSQL, MongoDB, Cassandra
Operating Systems	Windows, Linux, Unix
Testing Frameworks	Junit, Mockito, Selenium, Cucumber, Jasmine, Karma, Mocha and Chai
Methodologies	Agile/Scrum/XP/Kanban, Waterfall, OOAD, TDD

EDUCATION:

Masters in Computer Science

WORK EXPERIENCE:

Grainger (Remote)
Java Full Stack Developer / J2 EE

May 2023- Present

Responsibilities:

- Gathered all project Requirements and Functional Specifications from Business users.
- Designed, developed and implemented Java-based software applications and components using **Spring frameworks**.
- Designed and developed the **REST API** based **Microservices** using the **Spring Boot, Spring Data** with JPA and used **Swagger** to interact with API end points of the Microservices.
- Created **UML** Diagrams based on the Business Requirements.
- Developed Microservices with **Spring Eureka** to retrieve API routes for the entire cluster. Using this strategy each microservice in a cluster can be load balanced and exposed through one **API gateway**.
- Implemented SOA to develop Spring Restful API/Microservices and **Spring Eureka, Netflix** as a part of **Service Discovery** using **Apache Axis** and **Spring Ribbon** for load balancing.
- Used **Java 11** features in developing the code.
- Developed **reactive webservices** using Spring WebFlux with **Flux and Mono**, enabling asynchronous processing and enhancing application performance.
- Developed user interface using **HTML, JSP, Servlets, CSS, Java Script and Ajax**.
- Used AJAX in user Validation and Suggestion list and to display dialog Boxes.
- Designed and developed **RESTful APIs**, facilitating seamless data exchange between various platforms.
- Utilized Google Cloud Platform (GCP) services, including **GCP API Gateway**, Compute Engine, IAM, and Cloud Storage for API deployment and management.
- **Google Kubernetes Engine (GKE)** for container orchestration, ensuring efficient management of containerized applications.
- Designed and implemented backend services using the **ExpressJS** framework to handle HTTP requests, enabling efficient and scalable routing for various banking functionalities.
- Built **GraphQL APIs** to enhance data querying and updates with greater flexibility and efficiency compared to

RESTful services, and integrated **GraphQL** with existing microservices to streamline data fetching, reduce multiple **API** calls, and improve performance.

- Worked on implementation of business logic, validation framework using **Spring Webflow**.
- Responsible for developing the sequential and conditional batch jobs using the **Spring Batch** framework.
- Used **Google Cloud resources** like Compute Engine, IAM, Google Container Registry, Container Builder and Cloud Storage buckets.
- Developed various pages in the applications in front end technologies **HTML5, CSS3-SASS, JSON, Angular 14/13, Typescript, Angular Material and NodeJS**.
- Developed **CI/CD pipeline** and build tasks to run the unit tests on Jenkins and maintained separate build in **Maven** for the module for easy integration to the portal build and configure with Jenkins.
- Used **Maven** for build and deployment to **Tomcat** server and **Splunk** as log monitoring.

Environment: Java 17, Spring Boot, Spring Eureka, Spring Web Flow, Spring MVC, Spring Security, Spring Data, Amazon Web Services (AWS), Google Cloud Platform (GCP), Hibernate, REST API, OAuth 2.0, Swagger, HTML5, CSS3-SASS, JSON, Angular 14/13, Typescript, Apache Kafka, Docker, Kubernetes, Maven, Jenkins, GIT, Tomcat Server, Splunk, Oracle, MongoDB, Spring Tool Suite (STS), Cucumber, Selenium Web Driver, Jira

Inspirisys Solutions Limited, Chennai, India.

July 2021 – Nov 2022

Java Full Stack Developer

Responsibilities:

- Involved in the Development of presentation Modules.
- Designed ,developed and maintained High-quality Software Solutions using **JAVA11** and **SpringBoot Micro Services**.
- Designed and developed cloud native applications using **Java 11, Spring Cloud** and other frameworks running on **Microsoft Azure**.
- Created, validated, and reviewed solutions and effort estimate of converting existing workloads from classic to **ARM based Azure Cloud Environment**.
- Developed **Azure Function App** to drive event.
- Maintained **full stack responsibility**, from design to deployment, ensuring robust and scalable application delivery.
- Maintained quality **Microservices** code and developed a **RESTful API** to interact with the Microservices.
- Developed **RESTful APIs using Express.JS** to support patient registration, appointment scheduling, and other healthcare services, ensuring secure and efficient data handling.
- Developed interactive web components with deep knowledge of **JavaScript DOM manipulation** and object model, resulting in a dynamic user experience.
- Led the development of **micro front end applications**, integrating multiple frameworks and libraries for seamless user interfaces.
- Managed **API integrations** using frameworks like WSO2, enabling efficient and secure API communication.
- Implemented reactive data repositories with **Spring Data Reactive**, ensuring non-blocking database access.
- Built microservices using **Spring Boot** and **Spring Cloud** to integrate health data and recommendations from Kaiser Permanente, ensuring the application provided accurate and up-to-date nutritional advice.
- **Google Kubernetes Engine (GKE)** for container orchestration, facilitating the efficient deployment and scaling of applications.
- Deployed the applications to Azure cloud and setting up the context for **Kubernetes pods** with SSL certificates.
- Used **Spring JDBC Template (Spring Data)** in connecting to Data source to get the database connections.
- Designed and developed web pages **HTML, JSP, Portlets, AJAX, JSTL, JavaScript, ReactJS, Bootstrap, jQuery & CSS**.
- Implemented **ReactJS** integration with backed applications and made REST calls via **Redux Saga** approach.
- Developed and deployed back-end services to **Azure cloud**, utilizing **Azure Service Bus, Azure Active Directory, Azure Storage, Azure SQL Server, Sitecore, Blobs, Pages, Queues, Tables, and VMs**.
- Implementing web security using HTTP security tags.

Environment: AWS, AWS S3, redshift, Athena, glue, MYSQL, Apache Spark, PySpark, Java, JIRA, control-m, airflow, Teradata, oracle, SQL, Relational SQL, Oracle.

VASR Info Tech Solutions , Hyderabad , India.

March 2018 -June 2021

Java Developer

Responsibilities:

- Actively Involved in various Phases of **Software Development Life Cycle(SDLC)** of the Application like requirement gathering design , analysis and code Development.
- Responsible for requirements analysis, technical design, implementation, testing and documentation.
- Implemented service layer using **Spring IOC** and annotations and Controllers using **Spring MVC**.
- Worked on the **Oracle** as the Backend DataBase.
- Designed SOAP-based **Spring Webservices**, built user interfaces using Java/Spring technologies, and worked on **API** implementation using both **Restful** and **SOAP** Webservices.
- Utilized **Java** and **XML/JSON** requests to be send as **SOAP** and **REST API** calls to these interfaces using **XSL, XSLT, Angular 5** and HTTP Client.
- Configured **Spring** to manage actions as beans and set their dependencies in spring context file and integrated middle tier with **Spring** Web Layer.
- Utilized Spring Data Repositories to perform **CRUD** operations.
- Used **Spring** Core to define **beans** for Services, **Entity** services and corresponding depended services.
- Designed User Interface issues using various front-end technologies such as **HTML, CSS, and jQuery, Bootstrap, AngularJS** and **AJAX**.
- Developed custom **Angular 5** directives, **components, services, templates** and integrated with Spring Forms.
- Implemented Angular observables and listeners (RxJS reactive libraries) to simplify the making asynchronous calls to backend **Rest APIs** and used **Swagger UI** for **API** documentation.
- Implemented **JSON** Web Token (JWT) to securely transfer claims between two **microservices** applications.
- Used **PL/SQL** stored procedures for applications needed to execute as part of scheduling mechanisms.
- Developed the code environment using **IDE** as **Eclipse** and handled multiple **UNIX Shell Scripts** and **WebLogic** Server maintenance at the production servers and test environments for application maintenance.
- Troubleshoot the production incidents, analyse and provide the fixes using Java tools like **XSLT, SOAP, and PL/SQL** and **XML** configurations. Used **XML Web Services** for transferring/retrieving data between different providers.
- Used **Jasmine** test runner and **Karma test framework** to test **AngularJS** components.
- Implemented all the components following **test-driven** development **methodology** using **JUnit**.
- Used **JIRA** as an issue tracker tool to collaborate with testers and functional team as well as to track defects and change requests.

Environment: Java 8, Spring MVC, Spring Security, Spring Data, Hibernate, Restful Webservices, HTML5, CSS3, Bootstrap, Angular 5, Ajax, JQuery, Tomcat Server, XML, JSON, SQL, Oracle, Eclipse, GIT, Jenkins, Maven, Log4j, Jasmine, Karma, Junit, Jira
