

Summary

- Software Developer with 1+ year of experience in designing, building, and maintaining backend services and enterprise applications, following Agile practices and delivering performance-optimized solutions.
- Exploring and applying AI/ML concepts to automate tasks and enhance application workflows, with a growing interest in building intelligent and efficient software solutions.
- Strong collaborative and problem solving abilities, with a focus on clear communication, continual learning, and contributing effectively in team oriented environments.

Employment

Developer Associate	SAP Labs India	July 2024 – September 2025
• Contributed to the development of the Catalog.Next platform, focusing on backend services and automation pipelines supporting high-volume enterprise catalog processing. • Built the Catalog Cleansing and Validation modules for Catalog.Next by defining configurable rule logic in the SBPA Decision Project and exposing them via SBPA APIs. Integrated these rule services with Scala and Apache Spark-based distributed processing workloads to cleanse and validate catalog items at scale. This solution improved processing efficiency, reduced execution time, and enabled easier rule configurability compared to the previous generation approach. Tech stack: Scala, Apache Spark, Spring Boot, SBPA Decision Project, SBPA APIs. • Followed the Software Development Life Cycle (SDLC) while developing the Catalog Cleansing and Validation modules, performing structured unit testing and participating in peer code reviews to ensure high code quality. • Automated the Catalog Validation and Approval workflows using QMate UI Automation and Mocha-based API test suites, reducing repetitive manual QA effort and enabling faster and more consistent release validations. • Implemented header-level approval workflows for BX.Approvals using the SBPA Approval Project with Responsibility Management APIs to dynamically resolve approvers and route requests to MyInbox. Used GitHub Copilot to speed up development (~60% code generation), enabling faster delivery. Tech stack: SBPA Approval Template, SBPA APIs, Spring Boot, Kafka. • Designed a modular validation framework for the PR Workflow system using a ValidationCheck interface and CAP Action APIs, enabling SBPA-driven PR status transitions. Utilized GitHub Copilot to generate 60% of implementation scaffolding, improving delivery speed and maintainability. Tech stack: SBPA Approval Task, CAP Action API, Spring Boot.		

iXP Internship	SAP Labs India	Jan 2024 - July 2024
• Written extensive JUnit and ScalaTest classes with Mockito for comprehensive test coverage of backend services and workflow scenarios. • Gained hands-on experience with backend testing, workflow orchestration, and developer tooling within SAP's internal cloud infrastructure.		

Projects

AI-Powered Branching Storytelling Platform (LangChain + FastAPI + React)	(October 2025)
• Developed an intelligent narrative generation system using OpenAI LLMs and LangChain, enabling dynamic, context-aware story progression. • Designed and implemented backend APIs in FastAPI to manage story state, user decisions, and multi-turn conversational context. • Built an interactive React frontend that visualizes evolving story paths and allows users to drive narrative outcomes through decision prompts.	

- Gained hands-on experience in integrating **AI/LLM models** with application workflows, learning prompt engineering and context management for dynamic story generation.

AI-Powered Personalized Healthcare Assistant

(September 2025)

- Developed an ML system to predict patient risk levels and recommend personalized treatment plans using **Scikit-learn and TensorFlow**.
- Built a recommendation engine integrating historical medical records, demographics, and lab results to prioritize high-risk patients.
- Designed REST APIs to expose model predictions and integrate with hospital dashboards for real-time decision support.
- Achieved **90% accuracy in risk prediction** and reduced manual triage workload by 40%.

Invoice Extraction using AWS Intelligent Document Processing (IDP)

(March 2023)

- Built a document automation solution using **AWS Textract** to extract structured data from scanned PDF invoices as part of the **SAP Industry Development Internship**.
- Integrated **AWS Lambda** functions to orchestrate the extraction workflow and used **AWS DynamoDB** to store and manage parsed invoice fields.
- Simulated a real-world invoice processing pipeline, demonstrating **end-to-end extraction, validation, and storage** in a serverless cloud architecture.
- Followed **Agile methodology** with bi-weekly **Scrum ceremonies**, collaborated with SAP mentors, and presented the final solution to the **SAP Concur** team.

Skills

- **Languages:** Java, Scala, Python
- **Frameworks and Tools:** Spring, Spring Boot, Spark, FastAPI
- **AI, ML, and Productivity Tools:** OpenAI, GitHub Copilot, MAUI Chat, Machine Learning
- **Automation and Testing:** Selenium, QMate, Mocha, REST Assured
- **Development Methodologies:** Agile, Scrum, Test-Driven Development (TDD)

Publications and Certifications

- **Publication:**
"Parallelizing Sieve of Eratosthenes Algorithm in Banking Application," **IEEE, 2024**
- **Certifications:**
 - **Oracle Cloud Infrastructure Certified AI Foundations Associate**, Oracle, 2025
 - **Forward Program**, McKinsey, 2025 (In Progress)

Education

Anna University - PSG Institute of Technology and Applied Research, Coimbatore **2020 – 2024**
B.E, Computer Science and Engineering - **9.05 CGPA**

Online Profiles

- **LinkedIn:** [linkedin.com/in/sanju-revanth-ar](https://www.linkedin.com/in/sanju-revanth-ar)
- **GitHub:** github.com/sanjurevanthar
- **LeetCode:** leetcode.com/u/sanjurevanth

Achievements and Awards

- Participated in the **SAP Industry Development Internship** conducted by **SAP Concur**, gaining hands-on exposure to real-world SAP projects and enhancing professional skills in enterprise software development.
- Secured **3rd place** in the **Cricket Data Hackathon** at SAP Innovation Days organized by the **SAP Experience Garage**.
- Recognized with the **Rising Star** award in **SAP Procurement Product Engineering India** for significant contributions to the **Nexus project**, demonstrating initiative, ownership, and technical impact.
