## SUMMARY

With over 9 years of hands-on experience, I am a results-oriented SAP Development professional specializing in SAP S/4HANA, ABAP, and enterprise application solutions for the manufacturing and automotive sectors. My expertise encompasses leading development teams, overseeing successful SAP rollouts, and delivering quality solutions tailored to business objectives. I have extensive knowledge in SAP application design and development, including skills with adobe forms, ODATA Services, REST/SOAP APIs, RAP (ABAP Restful Application Programming Model), New ABAP 7.4 syntax, Clean Core Concepts, Custom Field Extensions (Custom Fields and Logic, CFL), CDS, object-oriented programming, BADI, user exits, screen exits, BTEs (Business Transaction Events), NACE, SPAU/SPDD/SPAU\_ENH, change pointers, lock objects, file interfaces, RFC, parallel processing, email automation, advanced debugging, qRFC, tRFC, table events, event mesh, performance tuning, IDOCs, and flexible workflow. I also have a strong track record mentoring peers, conducting code reviews, and ensuring compliance with SAP best practices. My collaboration skills allow me to work effectively with global teams, coordinate SAP deployments, and foster continuous improvement across SAP landscapes.

---

## TECHNICAL SKILLS

- Programming Languages/Frameworks: ABAP (Expert), React(Intermediate), Dot Net Core(Intermediate), Python (Intermediate), C# (Intermediate), Javascript (Intermediate), JAVA (Intermediate), C (Beginner), HTML (Beginner), CSS (Beginner).
  - Tools: Visual Studio, Jupyter Notebook, PyCharm, IntelliJ IDEA, JIRA, Eclipse, GIT, SAP ERP, Solution Manager.
  - Tools/Languages used for course projects this semester:
    - Python, Matplotlib, Tensorflow, sci-kit learn
  - Databases: MongoDB, MySQL, Firebase, HANA, Sybase.
  - Operating Systems: Windows, Basics of Linux
  - Basics of Selenium and Soup
- 

## EDUCATION

Master of Science in Computer Science – 3.9 GPA  
University of Texas at Arlington, TX

Aug 2023 – May 2025

Bachelor of Engineering in Electronics and Communications Engineering  
Visvesvaraya Technological University, India

Aug 2010 – Jul 2014

---

## PROFESSIONAL EXPERIENCE

### Paycom, USA – Software Development Engineer

Jun 2025 – Present

Responsible for maintaining the product through research, issue resolution, and thorough ticket testing. Contributed to the development of new features according to product requirements. Automated testing processes, including both UI and API testing. The product's technology stack comprises PHP, Javascript and React, while automation utilizes C# and Selenium.

### University of Texas at Arlington, USA – Graduate Teaching Assistant

Aug 2024 – May 2025

Assisting DBMS 1 professor with grading, project guidance, and student support for coursework and concepts.

### Paycom, USA - Software Developer Intern

May 2024 – Aug 2024

Developed a machine learning-based solution at Paycom to identify key factors causing pre-production reverts, leading a team to build a full-stack analytics dashboard using React, C#, Python Flask, and MySQL for data-driven decision-making.

### IDIR Lab, University of Texas at Arlington, USA - Research Assistant

March 2024 – May 2024

- Web scraping – Scraping websites using Selenium and Soup libraries to extract data required by PhD students for their research.
- Currently started working on extracting measurements from Fitbit to transfer it to server and then trigger messages to user's number based on certain parameters.

### Deloitte USI, Bengaluru, India – Senior Consultant

May 2019 – Jul 2023

Client: Cargill

August 2020 – Jul 2023

- Delivered ODATA, IDOC, enhancements, forms, and reports for SAP FI, SD, TM, Commodity Risk Management, and ACM domains.
- Guided a team of four in ACM, overseeing code reviews, requirement analysis, solution design, technical discussions, and tracking object status.
- Led retrofit activities to synchronize code between systems for upgrade testing.
- Built solutions for nominations, purchase orders, and requisitions in agriculture; skilled in ODATA for crop transactions.
- Managed performance reviews and improvements for various solutions.

**Client: Qorvo**

**October 2019 – August 2020**

- Handled various change requests for reports, enhancements, smart forms, and production tickets.
- Mainly focused on SAP MM; communicated with client functional teams to clarify requirements and test changes.

**Client: Walmart Inc**

**May 2019 – October 2019**

- Managed pagers and monitored payment flows across shifts as a Production team member.
- Addressed production incidents and problem tickets, including changes.
- Applied SAP Notes for security upgrades on multiple systems.

**Infosys Limited, Bengaluru, India - Technology Analyst**

**Oct 2017 – May 2019**

**Client: Ralph Lauren**

**October 2017 – May 2019**

- Studied existing processes and gathered business unit requirements for production support.
- Experienced with SAP AFS.
- Served on the Upgrade team for ECC and Solman service pack updates.
- Trained in SAP ABAP on HANA, covering HANA DB, column store tables, modeling fundamentals, CDS Views, AMDP, ADBC, ALV IDA, fuzzy search, enhanced Open SQL, and SQL Script.

**LTI (Formerly L&T Infotech), Pune, India - Software Engineer**

**Jun 2014 – Oct 2017**

**Client: Johnson Controls**

**June 2014 – October 2017**

- Designed and implemented an advanced dashboard integrated with Extended Warehouse Management (EWM).
  - Supervised a small team within the Grouped Production Orders project; participated in requirement analysis, code reviews, and ensured adherence to code quality standards.
  - Recognised as Achiever of the Month for significant contributions to EWM implementation and brownfield projects.
  - Contributed to the Finance domain by managing reconciliation reports, invoice generation, and billing documentation.
  - Developed and maintained complex reports and interfaces, including EDI/ALE/IDOCs, RFCs, BAPIs, User Exits, BADIs, BTEs, Enhancement Points, Switch Framework, SAP Scripts, Smartforms, SAP Workflow, LSMW, OSS Notes, system monitoring, and system upgrades.
- 

## ACADEMIC PROJECTS

### GiveAway

Giveaway is a mobile application that facilitates the bridge between individuals and communities through the simple act of giving away the things that they no longer need for free. Using React Native for frontend and firebase as database and backend.

### Shortest Path Algorithms Ttkbootstrap Application

Built a GUI based application using “Ttkbootstrap” library. For an input size of number of vertices, generating a graph using “networkx” library and providing the time taken in a plot using “matplotlib” library. Implemented Breadth for Search, Bellman Ford, and Dijkstra’s Algorithm to find the shortest path (single source multiple destinations) in a graph. Below options are available for the user.

- For an input size of number of vertices user can select an algorithm and see the runtime taken by that algorithm in output plot.
  - For an input size of number of vertices user can select multiple algorithms using “Compare” checkbox and see the plot of time taken by each algorithm and compare their run times.
  - Provide range of number of vertices with step size using “Range” checkbox, select an algorithm and see the time taken by selected algorithm for each vertices size in the output plot.
- 

## PROFESSIONAL PROJECTS

### Revert Danger Score (Software Design, Database Design, Basics of Data Science)

- Collaborated on a research-oriented project with a team of 7 interns at Paycom to identify parameters causing pre-production reverts, stabilizing the branch for production.
- Analyzed APIs and identified key features; trained multiple machine learning models using scikit-learn, with Random Forest being the most accurate.
- Developed a full-stack solution: Built a dashboard using React, C#, and Python Flask; integrated a MySQL database for data storage and analytics.
- Implemented model-based scoring in Flask backend, utilizing a pickled Random Forest model for decision-making.
- Utilized Jupyter Notebook for data preparation and cleaning.

**Decoration Dashboard(SAP Dashboard)**

- Efficiency Boost: Created the "Decoration Dashboard" to reduce manual work and save 60% of processing time.
- Collaborative Effort: Collaborated with multiple teams, including functional, client, and technical teams, due to integration with Extended Warehouse Management (EWM).
- Multi-Functionality: Developed a versatile dashboard with four key functions, allowing users to generate production orders based on various criteria and reverse orders when needed.
- Extended Warehouse Management (EWM) Integration and Automation: Seamlessly integrated with EWM via a custom API to track real-time production order statuses and automate key processes, such as purchase order blocking and reversal.

**ODATA (REST API) Nomination creation**

Developed an ODATA REST API connecting a client portal for creating diverse crop purchase Nominations, including quality documentation and dynamic adjustments based on sample testing results.

**Dynamic query building and dynamic mapping of excel fields with internal fields based on user customizable entries of a table.**

Mapped Excel fields to internal program fields for posting futures and options documents, enabling user customization. Designed a flexible nested table to accommodate various file formats and complex field mapping logic, optimizing data retrieval with dynamic queries.
