Summary

Senior Software Engineer with 10+ years of experience, specializing in C#, Cloud infrastructure and Microservices architecture. Demonstrated capabilities in transforming business needs into software solutions and balancing rapid delivery with high-quality standards in 3 healthcare projects.

Skills

C# · C/C++ · Java · Python · JavaScript · TypeScript · React · Angular · Node.js · Vue.js · Next.js · Blazor · .NET · ASP.NET · ASP.NET MVC · ASP.NET Core · Azure · AWS · Azure Functions · AWS Lambda · MS SQL Server · PostgreSQL · MySQL · Entity Framework · EF Core · DevOps · Docker · Kubernetes · Git · GitHub · GitLab · Microservices · RabbitMQ · HIPAA

EXPERIENCE

CVS Health

Woonsocket, RI

Lead Software Developer

01/2024 - 07/2025

- Led the migration of monolithic medical lab management systems to microservices using **ASP.NET Core 8** and **Angular 18** on Azure Kubernetes Service (**AKS**); boosted performance, ensuring HIPAA and FHIR compliance.
- Integrated **OCR** processes to convert scanned PDFs into digital formats using ASP.NET Core 8 and SignalR, enabling seamless extraction and exchange of laboratory data in **FHIR** compliant formats for enhancing interoperability in healthcare systems.
- Implemented robust data encryption, access auditing, and secure API gateways to ensure end-to-end **HIPAA** compliance across all microservices and data exchange workflows.
- Developed and optimized dynamic, responsive healthcare dashboards and forms using **Angular 18**, leveraging RxJS and state management for real-time data updates and enhanced user experience.
- Integrated **Azure Cognitive Services AI APIs** into microservices to enable automated extraction, classification, and validation of healthcare data, enhancing system capabilities without disrupting existing workflows.
- Orchestrated **Azure** infrastructure on Azure Kubernetes Service (**AKS**), integrating API Management (**APIM**), Service Bus, Application Insights, Active Directory, and Azure **DevOps** for the **Hybrid architecture**.
- Integrated Azure API Management (**APIM**) Service for secure and scalable API management and leveraged **GraphQL** to facilitate flexible and efficient data retrieval tailored to client-specific needs.
- Implemented **Azure Service Bus** for decoupled, asynchronous communication between 10+ microservices, enhancing scalability and fault tolerance.
- Integrated **Azure Blob Storage** for scalable file management and **Azure Cosmos DB** for high-performance, schema-less data storage, enabling efficient handling of 1 million unstructured and semi-structured content.
- Enhanced performance by optimizing **Stored Procedures** using **T-SQL** scripts, redesigning stored procedures, and leveraging **EF Core 7** for efficient data access.
- Configured performance monitoring with **Kusto** queries in Azure **Application Insights**, enhancing **Azure function apps** reliability and reducing troubleshooting time by 40%.
- Integrated **Azure Active Directory** to enable secure authentication and role-based access control (**RBAC**) across 10+ microservices, streamlining identity management and enhancing security compliance.
- Instituted robust security protocols using Azure **Entra ID**, **OAuth 2.0**, and **JWT** authentication, IP whitelisting, and secure token storage while safeguarding sensitive data.
- Leveraged **Datadog** to monitor the health, performance, and availability of 10+ microservices in real-time and set up logging, metrics, and alerts to identify and troubleshoot issues.
- Automated Azure API Management (**APIM**) deployment in **Azure DevOps Pipelines** using **Terraform**, optimizing Azure Function Apps endpoint mapping through YAML scripts and ARM templates, resulting in a 50% reduction in deployment time.

EXPERIENCE

Hallmark Health Care Solutions

Hauppauge, NY

Senior Software Engineer

04/2020 - 12/2023

- Spearheaded the migration of monolithic patient management and billing systems to a distributed microservices architecture with **ASP.NET Core**, utilizing **SAGA** pattern, **RabbitMQ**, and Apache **Kafka** to enhance system modularity, scalability, and performance.
- Developed and deployed 15 RESTful APIs enabling patients to submit billing information online by implementing serverless architecture with **AWS Lambda**.
- Built **Store-And-Forward** system by adding an auxiliary bank server to temporarily store failed transactions and automatically reprocess after 1 min.
- Integrated Amazon **S3** and **AWS Glue** for product data storage and configuration, incorporating Amazon **AI services** for ACH transaction processing.
- Architected a comprehensive database in **Microsoft SQL Server**, integrating an **ETL** data pipeline with **SSIS**.
- Optimized data pipelines for healthcare analytics using Databricks notebooks with **PySpark** and **Scala**, improving processing efficiency by 30% and enabling real-time insights from Azure DataLake.
- Leveraged **Blazor** WebAssembly to build rich, interactive web interfaces within ASP.NET Core applications, enabling seamless client-side functionality and improved user experience.
- Engaged in Test-Driven Development (**TDD**) practices, utilizing **NUnit**, **XUnit**, **Jest** and **Mocha**, resulting in a 25% reduction in post-release patches and improved software reliability.
- Designed and implemented a unit and integration testing strategy with **xUnit** for C#, while integrating SonarQube.

UCHealth

Aurora, CO

Senior Software Engineer

01/2019 - 02/2020

- Conducted **code reviews** and mentored three junior developers, fostering a collaborative team culture and contributing to the growth and success of a 7-member development team.
- Led **API integrations** with 3 third-party logistics systems through **AWS API Gateway**, implementing throttling, versioning, and caching with **CloudFront**.
- Developed a micro frontend system with **React** and **Next.js**, enabling independent module deployment and enhancing scalability and optimizing API communication through lazy loading.
- Architected a scalable **Web API** template using vertical slice and the **MediatR** library, incorporating **CQRS** and Domain-Driven Design (**DDD**) principles to define domain models and bounded contexts, improving modularity and reducing API response times by 15%.
- Orchestrated serverless backend with **AWS Lambda** and **Step Functions**; enforced security with AWS **WAF** and **Cognito**; enabled observability through **CloudWatch** metrics, logs and alarms - delivering a scalable, resilient, and secure API ecosystem that processed 5 million API calls monthly.

UCHealth

Aurora, CO

Software Engineer

08/2015 - 12/2018

- Developed scalable **RESTful web APIs** using C# and .NET, enabling seamless integration with frontend applications and third-party services.
- Collaborated with **Cross-Functional** Teams including product management and **QA/QE** to deliver high-quality web software following **SAFe** principles, achieving a 90% on-time delivery rate.

Education

Colorado Technical University

Colorado Springs, CO

Master's Degree, Information Technology

08/2016 - 05/2018

Southern New Hampshire University

Manchester, NH

Bachelor's Degree, Computer and Information Technology

03/2013 - 05/2015
