Professional Summary

Senior Software Engineer with 11 years of experience building scalable, cloud-native, and AI-powered solutions across industries including e-commerce, defense, and education, using **C#, Python, React, Angular, and Node.js**, with deep expertise in **AI/ML, LLMs**, and **MLOps**, and real-time architectures with **.NET, FastAPI, Django**, and **AWS/Azure**. Skilled in implementing **asynchronous workflows**, and leading cross-functional teams. Passionate about delivering secure, accessible, and high-impact software.

Technologies

Backend: Python, Django, Flask, FastAPI, C#, .NET, .NET Core, ASP.NET, WCF, LINQ, Dapper, Blazor, Razor, Node.js, Express.js, Go, Numpy, Tensorflow, Pandas, Scikit-learn, Spacy, Matplotlib, Langchain

Frontend: Angular 8+, React 16+, Javascript, Typescript, ES6, TailwindCSS, React Hooks, Webpack, Vite, Next.js, Jest, Cypress, Karma

Database: MySQL, PostgreSQL, Oracle, MS SQL, SSIS, SSRS, T-SQL, Redis, Memcached, MongoDB, Elasticsearch, Hadoop

Other: Git, GitHub, GitLab, Visual Studio, DataBricks, Apache Spark, Kafka, RabbitMQ, PowerBI, Snowflake, Salesforce, CI/CD (Docker, Kubernetes, Jenkins, Ansible, Terraform), Sentry, Grafana, Datadog, Microservice, Monolithic, SOA, N-Tier, Agile (Scrum, Kanban), TDD, SOLID, OWASP, Azure DevOps / Functions / Service Bus / EventGrid, AWS Lambda / SNS / SQS

Professional Experience

Senior Full-Stack Engineer | AWS

Aug 2021 – Present

Led development of AI-powered product recommendations, multi-tenant e-commerce platform, real-time dispatch board, and geo-search service locations page using C#, Python, React, Angular, and AWS.

- Led a cross-functional team of 6 engineers, mentored junior developers, and conducted code reviews to enforce coding standards and design patterns, resulting in higher team velocity and reduced production bugs by 30%.
- Designed and deployed AI-driven product recommendation systems using **Python, TensorFlow, Scikit-learn**, and **Langchain**, integrating with **FastAPI** and hosted on **AWS SageMaker** to deliver real-time personalization at scale.
- Built and maintained a multi-tenant e-commerce platform using **C#, .NET 7**, and **MS SQL Server**, implementing secure role-based APIs via **REST** and **GraphQL**, and frontend components with **Angular** and **Figma**.
- Engineered a real-time dispatch board using **React, Redux**, and **WebSockets**, enabling live scheduling and technician tracking across service regions, with backend orchestration using **Django** and **Redis**.
- Developed a location-based service search page for users and dispatchers using **Next.js, GraphQL**, and **AWS DynamoDB** and **Location Service**, optimized for fast geo queries and responsive UX.
- Integrated **MLOps** pipelines with **Databricks, AWS Step Functions**, and **Power BI**, automating retraining, evaluation, and visualization of predictive models for operational metrics.
- Led development of internal tools with **React Native** and **FastAPI**, streamlining technician onboarding and field service reporting on mobile platforms.
- Optimized SQL queries and analytics dashboards using **T-SQL, Redis**, and **Power BI**, reducing reporting latency by 45% across business-critical systems.
- Instrumented and monitored cloud applications with **Datadog** and **Kafka**, ensuring observability and fault tolerance in distributed systems across microservices running in **AWS**.
- Implemented end-to-end **CI/CD pipelines** using **AWS CodePipeline, GitHub Actions, Docker** and **Kubernetes**, automating build, test, and deployment processes to accelerate release cycles and improve deployment reliability.

Technologies: React, React Native, Python, Django, FastAPI, C#/.NET, Angular, MS SQL Server, Redis, MLOps, Databricks, Kafka, AWS

Senior Engineer III | Beast Code

Mar 2018 – Jul 2021

Developed a 3D digital twin platform for defense systems and a fleet readiness dashboard for naval assets using C#, .NET, Golang, Angular and Azure and real-time data pipelines with Kafka and Redis.

- Architected a 3D **digital twin platform** for defense systems using **C#**, **.NET Core**, and **Blazor**, enabling real-time equipment visualization and reducing maintenance planning time by 40%.
- Built interactive frontend modules with **Angular** and **Telerik**, delivering a responsive **SPA** experience with **lazy loading** and full **WCAG 2.1 accessibility** compliance for DoD users.
- Engineered backend services with **Golang**, **EF Core**, **Dapper** and **LINQ**, optimizing data processing pipelines and supporting complex queries for equipment status, parts tracking, and fault analysis.
- Integrated real-time communication features using **SignalR**, **WebSocket**, and **WCF**, allowing collaborative asset inspection and remote support capabilities.
- Developed a fleet readiness dashboard using **.NET Core** and **REST/gRPC APIs**, connected to a **MongoDB** and **PostgreSQL** backend, helping naval teams monitor system health and readiness KPIs.
- Leveraged **ElasticSearch** for fast indexing and search over millions of records, improving system response time for log queries and fault investigations.
- Deployed and monitored solutions in **Azure**, using **Grafana** for telemetry visualization and **Apache Spark** to perform large-scale data analysis on equipment performance trends.
- **Led** testing and validation efforts using **NUnit**, and collaborated in CI/CD workflows to ensure production stability, while mentoring junior engineers and conducting regular peer code reviews.

Technologies: C#, .NET Core, Golang, LINQ, EF Core, Blazor, Telerik, WCF, SignalR, Angular, MongoDB, ElasticSearch, Spark, Azure

Full Stack Developer | Bit-Wizards

Sep 2016 – Mar 2018

Built a custom CRM for a real estate firm and an inventory logistics portal for an ecommerce client using Salesforce, Express.js, Node.js, Python, Django, and MongoDB to streamline operations and boost productivity.

- Developed a custom CRM platform using **Node.js**, **Express.js**, and **MongoDB**, enabling real-time lead tracking and automated follow-ups that increase client engagement rates by 30%.
- Identified and resolved web application and product issues reported by clients and made improvements to reduce tickets related to errors by 60% monthly.
- Built dynamic UI dashboards with **React** and **Angular**, implementing **SPA architecture**, **lazy loading**, and **accessibility best practices** to support enterprise usability standards.
- Integrated real-time notifications and activity feeds using **Socket.io**, improving internal communication speed and customer response time for high-value transactions.
- Designed secure APIs and admin interfaces using **Python** and **Django**, supporting user access controls, audit logs, and data segmentation for compliance with financial regulations.
- Automated cloud infrastructure deployment with **Terraform** and **Jenkins** in **Azure**, reducing provisioning time for new environments by over 50%.
- Synchronized customer data and sales workflows by integrating the CRM with **Salesforce**, streamlining lead conversion and marketing automation.
- Managed distributed data with **AWS DynamoDB** and **S3**, supporting high-availability order processing and scalable storage for inventory and logistics management.

Technologies: React, Node.js, Express.js, Python, Django, Redux, CircleCI, Terraform, Jenkins, Azure, PostgreSQL, React Native

Software Developer | United States Department of Defense

Oct 2010 – Sep 2016

Contributed to mission-critical defense systems supporting national security and operational readiness.

- Designed and deployed secure **RESTful APIs** using **Python/Flask** and **Node.js/Express.js**, enabling reliable communication between mission-critical defense applications.
- Built dynamic **React** and **AngularJS** front-end interfaces to deliver real-time intelligence dashboards and improve decision-making for defense operations.
- Engineered and optimized **PostgreSQL** databases for high-volume transactional workloads, ensuring data integrity and compliance with federal security standards.

- Migrated core applications to **AWS**, leveraging **EC2**, **S3**, and **RDS** to improve system scalability, resilience, and disaster recovery readiness.
- Implemented role-based access controls, encryption, and secure coding practices to meet **Department of Defense cybersecurity requirements**.
- Collaborated with cross-disciplinary teams to modernize legacy platforms, reducing system downtime and improving operational efficiency.

Technologies: Python, Flask, Node.js, Express.js, React, AngularJS, JavaScript, PostgreSQL, AWS

Education

University of West Florida

Bachelor of Science in Computer Science | 2007 - 2010
