

S. Sivakumar

73/68, Auto nagar, Edayarpalayam

Coimbatore, India

[+919789847423]

[siva.aug27@gmail.com]

[https://www.linkedin.com/in/sivakumar-s-37a56018/]

Certifications

- **MongoDB Certificate**

Completed MongoDB Associate Developer Exam with 72% marks.

[MongoDB Certificate](#)

Academic Profile

2008-2011	Master of Computer Application V.L.B. Janakiammal College of Engineering and Technology Coimbatore	86%
2005-2008	BSc Computer Science V.L.B Janakiammal College of Arts and Science college Coimbatore	61%
2004-2005	HSC, Jaycee Higher Secondary School,Coimbatore,State Board	56%

Professional Experience**Sr. React/NodeJS Developer (Remote)**

Toolsvilla Durgapur, West Bengal

November 2024 – till date

Company Description: Briefly describe Toolsvilla, highlighting its mission to modernize SMBs in India through its online marketplace for machinery, tools, and supplies. Mention the number of SMBs they've modernized and the range of products they offer.

Responsibilities:

- **Frontend Development:** React, focusing on building interactive user interfaces for the e-commerce platform.
- **Backend Development:** Node.js, server-side logic, API development, and database interactions with MongoDB.

- **Database Management:** MongoDB, including data modeling, schema changes, and database optimization.
- **Cloud Services:** utilizing AWS services such as S3 for storing product images, EC2 for running the backend server, CloudFront for CDN, and Lambda Functions for serverless operations like email notifications.
- **Full Stack Skills:** Emphasize your ability to work across the full stack, contributing to both front-end and back-end development.

Achievements:

- Google Sheet and Microsoft Handling More than 20000 records management and Separate thread for running.

Skills: List relevant technical skills, including:

- React
- Node.js
- MongoDB
- AWS (S3, EC2, CloudFront, Lambda)
- Payment gateway integration (e.g., Stripe)
- Order processing and management
- Inventory tracking

Core Functionality:

- **Order Processing and Management:** Enables efficient handling of customer orders.
- **Inventory Tracking:** Provides real-time visibility into product stock levels.
- **Payment Gateway Integration (Stripe):** Facilitates secure online payment transactions.

Database (MongoDB):

- Stores:
 - Product Information (name, price, description, images).
 - User Data (email, password, address).
 - Order Details, Vendors. etc
- Offers:
 - Flexible data modeling and schema changes.

Backend (Node.js):

- Powers the server-side logic of the application.

Frontend (React):

- Builds the interactive user interface.

AWS Services:

- **S3 Storage:**

- Stores product images and media files.
- **EC2 Instances:**
 - Hosts the Node.js backend server.
- **CloudFront:**
 - Acts as a Content Delivery Network (CDN) to improve website loading speeds.
- **Lambda Functions:**
 - Enables serverless operations, such as email notifications.

Benefits of the Tech Stack:

- **Scalability:**
 - Node.js's event-driven architecture handles high concurrent requests.
- **Flexibility:**
 - MongoDB's document-oriented structure allows for easy data model adjustments.
- **Rapid Development:**
 - React's component-based approach accelerates UI development.
- **Cloud Integration:**
 - AWS provides robust services for hosting, storage, and management.

Sr. React/NodeJS Developer (Remote)

Monopole Systems, Cochin, Kerala

June 2021 – August-2024

- Developing and maintaining web applications using React, NodeJS, MongoDB, MSSQL, and Redux.

PHP/React & NodeJS Web Developer (Lead)

Technoduce Info Solution, Coimbatore

January 2015 – June 2021

- Led development projects in PHP, React, and NodeJS, overseeing the full project lifecycle from design to deployment.

Web Developer

Nishta Solution, Coimbatore

June 2014 – December 2014

- Developed and maintained websites using PHP and front-end technologies.

Web Developer

Fibroin Technologies, Coimbatore

June 2012 – July 2014

- Worked on various web development projects utilizing PHP, WordPress, and other web technologies.

Technical Analyst

Clusterz Institute for Education, Coimbatore

May 2011 – June 2012

- Provided technical analysis and support for educational software and systems.

Projects

Fibroin Technologies:

- **Dynamic Paint (WordPress)** - getpainting.com
- **Supershield (WordPress)** - supershieldglobal.com
- **Questudio (WordPress)** - questudio.com
- **AJK Arts and Science (PHP Admin Panel)** - Student Portal Upload and Management System

Technoduce Info Solution:

- **Whitebook (Yii 2.03)** - Building an online eCommerce platform with a customer portal involves creating an environment where users can browse products, make purchases, and manage their accounts effectively. Here's a detailed breakdown of the key features and components you might include
Admin Modules : Dashboard, User Management, Product Management, Order Management, Vendor Management, Reports & Analytics, Content Management, Settings.
Customer Portal : User Registration and Authentication, Profile Management, Order History, Wishlist, Shopping Cart, Checkout Process, Customer Support, Product Reviews and Ratings, Subscription Management.
Frontend: Use Yii2.0.1 frameworks HTML, CSS, JQuery for a responsive and dynamic user interface.
Backend: Use Yii2.0.1 frameworks HTML, CSS, JQuery.
Database: Utilize databases like MySQL for storing user data and transactions. .
- **Roadaz (Yii 2.03)** - Search for cars based on location, type, price range, and availability. Filter results based on specific features (e.g., GPS, air conditioning). Detailed descriptions, photos, and specifications of available cars. Select pick-up and drop-off locations and times. Choose additional options (e.g., insurance, extra drivers). View total cost including taxes and fees. Create and manage accounts. View booking history and manage personal information.
Module: Car Inventory Management, Booking Management, Reporting and Analytics, User Management, API Integration for Payment.

Frontend: Use Yii2.0.1 frameworks HTML, CSS, JQuery for a responsive and dynamic user interface.
Backend: Use Yii2.0.1 frameworks HTML, CSS, JQuery.
Database: Utilize databases like MySQL for storing user data and transactions. .
- **Hotel Reservation (Yii 2)** - The goal of this project is to design and implement a user-friendly Hotel Reservation application that enables customers to search for, book, and manage hotel rooms efficiently. The application should streamline the reservation process for both users and hotel staff, providing a seamless experience for booking, managing reservations, and services. 3rpms-hotelsoftware.de

Backend: Use Yii2.0.1 frameworks HTML, CSS, JQuery.

Database: Utilize databases like MySQL for storing user data and transactions. .

- **TiffinBoss (Yii 2)** - tiffinboss.com Clone Of Dining Power Food Ordering Application(CR additional).

- **Date Charmer (Yii 2)** - datecharmer.com

Date Charmer is a web application built using the Yii 2 PHP framework, designed to provide an elegant and efficient solution for managing dates and scheduling tasks. With its intuitive interface and powerful features, Date Charmer aims to streamline date-related operations, making it easier for users to organize and plan their activities.

Key Features:

Interactive Date Picker:

Event Scheduling:

Calendar Views:

Personal Scheduling:

Date Formatting and Localization:

User Authentication and Roles:

- **Dining Power Admin Panel & API (Yii 2) (ReactJS, Express JS & MySQL DB)** - The Dining Power Admin Panel & API project is designed to create a robust and user-friendly administrative interface and backend system for managing a DiningPower application. The project combines Yii 2 (PHP framework) for the backend, ReactJS for the frontend, ExpressJS for handling API requests, and MySQL for the database.

Key Components

Admin Panel (Frontend)

Technology: ReactJS Redux

Features:Dashboard: A comprehensive overview of restaurant operations, including key metrics and analytics.

Reservation Management: Tools for viewing, adding, editing, and cancelling Order.

Menu Management: Interface for creating and updating menu items, categories, and pricing.

Delivery Boy Management: Tools for managing staff profiles, roles, and schedules.

Customer Management: Access to customer profiles, interaction history, and feedback.

Reports & Analytics: Generate and view reports on sales, reservations, and other key performance indicators.

Backend (API)

Technology: Yii2, MySQL DB

Features: RESTful API: Provides endpoints for CRUD operations on reservations, menu items, staff, and customers.

Authentication: Secure login and session management for admin users.

Data Validation: Ensure data integrity and consistency across the system.

Integration: Connect with the Yii 2 framework to handle complex business logic and data interactions.

Backend (Business Logic)

- **Tabaogo (Yii 2)** – Online Food Ordering Application Clone Application(6-Months)

tabaogo.com

- **Taxi (Node Express Server & MongoDB)** - Taxi Booking System is a web-based application designed to facilitate the booking of taxi rides through a user-friendly interface. It is built using Node.js and Express for the server-side logic, with MongoDB as the database to manage user data, bookings, and other related information. The system also includes an admin panel to allow administrators to manage and oversee the entire taxi service. **User**

Features:

User Registration/Login:

Taxi Booking:

Ride Tracking:

Payment Integration:

Ride History:

Ratings and Reviews:

Driver Features:

Driver Registration/Login:

Ride Requests:

Earnings Tracking:

Availability Management:

Admin Panel Features:

Dashboard:

User Management:

Driver Management:

Booking Management:

Analytics and Reports:

Configuration Settings:

- **GatePass Hotel Booking (ReactJS, Express JS & MSSQL DB)** - GatePass Hotel Booking System is a web application designed to streamline the hotel booking process for both guests and hotel staff. It provides an intuitive interface for users to search for, book, and manage hotel reservations while offering hotel administrators a robust set of tools to manage bookings, rooms, and customer information.

Features:

Search and Filter:

Room Availability:

Booking System:

Secure and user-friendly booking process:

Create and manage user accounts:

Leave and read reviews for hotels and rooms:

Receive email confirmations and reminders about bookings:

User Management:

Reports and Analytics:

Send notifications:

- **LamSat Saloon Booking (ReactJS, Express JS & MSSQL DB)** - LamSat Saloon is a web-based booking system designed for managing salon appointments efficiently. The system features an intuitive user interface for clients to book appointments, manage their profiles, and view booking history. On the administrative side, the system provides a robust panel for salon managers to oversee appointments, manage staff schedules, and handle customer data.

Key Features:

User Registration and Login:

Appointment Booking:

Booking Management:

Notifications and Reminders:

Service and Staff Information:

Profile Update:

Address Management:

Admin panel:

Dashboard:

Staff Management:

Appointment Management:

Service Management:

Customer Management:

Reporting:

Monopole Systems

- **Activator (Remote)(July 2021-Jan 2023)** - Activator is an in-house ETL (Extract-Transform Load) tool, built and maintained by IDEA.

Load Process: The existing load process in IDEA requires Manufacturers (MFR) to load data to IDEA Connector using one of the preset normalized formats. Beyond the flexibility in the protocol (FF/XLSX/XML/EDI), MFRs had to follow the prescribed standard format. Activator has inbuilt loaders which can internally prepared load files for the Connector. Except for selecting the B-Views (B1-B9xx); there is nothing a user needs to configure for the loading process.

Once the Mapping is defined, Activator has inbuilt loaders which can internally prepared load files for the Connector. Except for selecting the B-Views (B1-B9xx); there is nothing a user needs to configure for the loading process.

Developed a mapping concept and admin panel with advanced technologies including React, TypeScript, NodeJS, MongoDB, Docker, AWS DevOps.

- **Extractor (Remote)(Jan 2023-Dec 2023)** - Applications are used to pull data from databases, websites, or other sources. They might be used for web scraping, data mining, or exporting data from one format to another. Developed data extraction and processing tools using React, Redux, TypeScript, NodeJS, MSSQL.

Key Technologies:

React : Hook, Functional Components, Store Slice. TypeScript : Used to enhance code quality and maintainability with static typing
NodeJS : server-side development, providing a scalable and efficient runtime environment to handle backend logic and API requests.
MSSQL : Managed data storage and retrieval using Microsoft SQL Server.

- **IDEA For Industry Client Feed (Remote)(Jan2024-Till Date)** - Developed a sophisticated data dashboard designed to deliver real-time analytics and insights for a large-scale business intelligence application. The project involved creating a user-friendly frontend, implementing state management, and establishing robust data communication between the frontend and backend systems.

Key Technologies:

React : Leveraged React's component-based architecture to create modular and reusable UI components.

Zustand: state management solution to handle complex state logic and ensure smooth and consistent user experiences across different components.

TypeScript : Used to enhance code quality and maintainability with static typing NodeJS : server-side development, providing a scalable and efficient runtime environment to handle backend logic and API requests.

MSSQL : Managed data storage and retrieval using Microsoft SQL Server.

ToolsVilla:

Core Functionality:

- **Order Processing and Management:** Enables efficient handling of customer orders.
- **Inventory Tracking:** Provides real-time visibility into product stock levels.
- **Payment Gateway Integration (Stripe):** Facilitates secure online payment transactions.

Database (MongoDB):

- Stores:
 - Product Information (name, price, description, images).
 - User Data (email, password, address).
 - Order Details, Vendors. etc
- Offers:
 - Flexible data modeling and schema changes.

Backend (Node.js):

- Powers the server-side logic of the application.

Frontend (React):

- Builds the interactive user interface.

AWS Services:

- **S3 Storage:**
 - Stores product images and media files.
- **EC2 Instances:**
 - Hosts the Node.js backend server.
- **CloudFront:**
 - Acts as a Content Delivery Network (CDN) to improve website loading speeds.
- **Lambda Functions:**
 - Enables serverless operations, such as email notifications.

Benefits of the Tech Stack:

- **Scalability:**
 - Node.js's event-driven architecture handles high concurrent requests.
- **Flexibility:**
 - MongoDB's document-oriented structure allows for easy data model adjustments.
- **Rapid Development:**
 - React's component-based approach accelerates UI development.
- **Cloud Integration:**
 - AWS provides robust services for hosting, storage, and management.

Responsibility:

Analytical Module Development:

- "Developed and maintained the analytical module, enabling data-driven insights for business operations."
- "Implemented Microsoft Excel integration for data creation and value validation, ensuring data accuracy before server transmission."
- "Designed and implemented image upload functionality, streamlining product data management."
- "Engineered a robust Google Sheets integration, utilizing separate threads to efficiently process and update large datasets (up to 20,000 rows), significantly improving data synchronization speed."

Consider these enhancements:

- **Quantify Achievements:**
 - If possible, add metrics to your achievements. For example:
 - "Reduced data processing time by X% through optimized Google Sheets integration."
 - "Improved data accuracy by X% by implementing excel value validation."
 - "Handled the image upload system that now manages X number of images."
- **Technical Skills Section:**
 - Add "Microsoft Excel" and "Google Sheets API" to your technical skills section.

- Managing long data flow Handling.
-

Technologies and Tools

- **Languages:** JavaScript, TypeScript, PHP, SQL
- **Frameworks:** React, NodeJS, Redux, Yii2, WordPress
- **Databases:** MongoDB, MSSQL, MySQL
- **Tools:** Docker, Nginx, Grafana, AWS DevOps
- **Other:** jQuery, AJAX

Declaration

I hereby declare that the details provided above are accurate to the best of my knowledge and belief.
