

Hanna Maliarchuk

Senior Software QA Engineer

maliarchuk.ann@gmail.com | linkedin.com/in/hanna-maliarchuk | +1 708 219 92 69 | Chicago, IL

Senior Software QA Engineer with 7+ years of experience in manual, API, performance and automation testing across complex web platforms and mobile applications. Proficient in test planning, documentation, and agile QA processes. Committed to ensuring software quality through collaboration, detailed analysis, and continuous improvement.

Core Skills

- **API & Performance Testing:** Postman, JMeter, k6, Grafana, Google Lighthouse
- **CI/CD & Version Control:** Jenkins, GitHub Actions, Bitbucket, GitLab
- **Monitoring & Debugging:** New Relic, MySQL, PHPMyAdmin, Chrome DevTools
- **Test Management & Collaboration:** Jira, Zephyr, TestRail, Trello, Confluence
- **Web Technologies:** HTML, CSS, XML, JSON
- **Cross-Browser & Device Testing:** BrowserStack, xCode, Appium
- **Automation & Frameworks:** Playwright, Cypress, Selenium, TestCafe, WebdriverIO
- **Programming Languages:** JavaScript, TypeScript, SQL, Groovy

Experience

Senior QA Analyst at Huge | 07/2025 - present

- Led the design and implementation of a performance testing framework for a large-scale B2B eCommerce platform, ensuring system scalability and reliability under peak load conditions.
- Partnered closely with Product and Engineering to provide QA input during feature design and planning, ensuring acceptance criteria were clear, testable, and aligned with user behavior.
- Developed and maintained end-to-end API load and stress tests using JMeter, applying best practices for reusable test structures, dynamic data management, and scenario randomization through extractors and Groovy scripts.
- Executed distributed load tests in an AWS environment, scaling load generation to mirror production traffic patterns.
- Analyzed performance metrics from New Relic and JMeter reports to prepare detailed load test reports for the client, identifying performance bottlenecks in 65% of critical purchase and checkout flows. Following optimization, average response times improved by 20%, reducing page latency and enhancing the end-user experience.
- Presented final performance reports to stakeholders, providing actionable recommendations for optimization.
- Trained QA engineers in performance testing methodologies, script maintenance, and distributed test execution, increasing team self-sufficiency.
- Documented performance testing processes, test plans, and report templates to standardize QA practices across the organization.
- Additionally supported the QA team in manual functional testing of newly implemented features, ensuring alignment between performance and functional quality standards.

Senior Software Engineer in Test at Youwe | 11/2021 - 07/2025

- Led manual testing efforts for multiple high-traffic Adobe e-commerce platforms, ensuring feature stability, data accuracy, and seamless user experiences across B2B and B2C environments.
- Created and maintained REST API test collections in Postman, enhancing API validation efficiency and enabling faster feedback on backend functionality.
- Contributed to the development and maintenance of automated regression suites using Playwright and Cypress (JavaScript/TypeScript), increasing test coverage and regression reliability.

- Designed and implemented a unified QA framework that standardized test processes across multiple projects and teams. This initiative resolved challenges arising from divergent QA practices after multiple team merges, improving onboarding efficiency.
- Initiated and structured a centralized QA documentation space in Confluence, consolidating test approaches, workflows, and reusable scenarios. This reduced time spent on investigation and test preparation by approximately 30%, improving team productivity and knowledge sharing.
- Authored scalable test plans, strategies, and documentation for both API and UI testing, ensuring full alignment with Agile sprint objectives and release cycles.
- Collaborated closely with developers, DevOps, and product owners to embed QA activities earlier in the SDLC, improving defect prevention and decreasing bug resolution time.

Software QA Engineer at Varis (Former BuyerQuest) | 03/2017 - 10/2021

- Joined BuyerQuest in its early startup phase, contributing to its growth into a large-scale enterprise solution (later rebranded as Varis) serving Fortune 500 clients.
- Tested Procure-to-Pay (P2P) platform for B2B and B2C marketplaces, ensuring seamless transactions for clients including McDonald's, Disney, Kimberly-Clark, Wendy's, Chick-Fil-A, Saudi Aramco, and United Airlines.
- Set up and rolled out Zephyr across the QA team, centralizing test case management and enabling end-to-end testing for P2P workflows.
- Participated in feature review and analysis meetings, integrating QA analysis early in the SDLC to align testing with business requirements.
- Initiated release management in Jenkins for QA, enabling branch deployments and status verification, reducing release time from 1–2 hours to 10 minutes.
- Trained QA team members on using New Relic for monitoring and log analysis, reducing root cause investigation time by 50%.
- Initiated use of MySQL and PHPMyAdmin for data validation during testing, helping differentiate between data-related issues and actual defects.
- Actively participated in Scrum activities and presented new feature implementations to stakeholders, fostering transparency and feedback.

QA Engineer at QA Madness | 09/2015 - 02/2017

- Tested iOS and Android mobile applications and web projects.
- Created and maintained test documentation (checklists, test cases) to standardize QA processes.
- Performed functional, regression, and UI/UX testing across browsers and devices.
- Managed defect tracking and verification, ensuring timely issue resolution.
- Delivered QA status and result reports to stakeholders, ensuring clear communication and project transparency.

QA Engineer at TestMatick | 07/2015 - 09/2015

- Conducted exploratory, functional, UI, and regression testing on both web and mobile applications, ensuring high-quality and bug-free releases.
- Performed cross-browser and cross-platform testing to guarantee compatibility and smooth performance across various devices and browsers.
- Prepared comprehensive test result reports, providing stakeholders with clear insights into testing outcomes.

Operations Manager at OTP Bank | 03/2014 - 03/2015

- Managed product and service orders through SAP Supplier Relationship Management (SAP SRM), ensuring accurate and efficient processing.
- Controlled document flow using AccDoc Lotus Notes, handling invoices, shipments, and acceptance certificates to maintain smooth operations.

Education

MS in Banking, University of Banking, 2014
Studied banking processes and technologies
