(Open to Relocate)

SUMMARY

Results-driven **Business Analyst** with **5+ years** of experience leading analytics and CX projects across **Energy, Hospitality, Healthcare, and Customer Experience domains**. Skilled in **Agile/Scrum, stakeholder management, SQL, Power BI/Tableau**, and data-driven decision-making, **actively seeking opportunities** to deliver high-impact project outcomes.

PROFESSIONAL EXPERIENCE

Pacific Gas and Electric Company PG&E

San Ramon, CA

Business Analyst

Jul 2023 - Present

PGE needs to maintain the safety of transmission towers around the forest. I worked with the Vegetation Management and Electric Operations units at PG&E on the PTT (Pole Test and Transform) dashboard, managing both the transmission and distribution aspects of the project.

- Improved PGE's revenue projections by using SAS, Power Query, macros, pivots, and charts in **MS Excel** data models
- Leveraged **Microsoft Office Suite (Excel, PowerPoint, Word)** to prepare detailed reports, presentations, and documentation, enhancing communication with stakeholders and project teams
- Developed optimized **SQL** queries to clean, transform, and analyze operational datasets, improving forecasting and project tracking accuracy by 85%
- Used **MS Project** to create and **manage project schedules**, track progress, and allocate resources effectively
- Streamlined forecasting, achieving **85%** accuracy through strong analytical & **SAS** utilization
- Collaborated with internal & external stakeholders to perform requirement gathering & create comprehensive business requirements documentation, mock-ups, and propose improvements to existing reports
- Utilized Palantir Foundry to **design and implement data pipelines** that streamlined the integration of diverse data sources, improving data accessibility and **reducing processing time by 25%**
- Created 5+ data visualizations using **Power BI**, summarizing behavior segments, and decision hierarchy
- Collaborated and communicated detailed project requirements and use cases, resulting in project completion management 5 weeks early
- Provided **recommendations on project re-pricing by analyzing the risk contingency**, project margins, and other project financials to **improve profitability by 15%**
- Implemented **structured workflow & quantitative** guidance, **resulting in a 15% improvement** in the decision-making process

Etech Global Services

Gandhinagar, IN

Technical Project Manager / Business Analyst

Dec 2020 - Nov 2021

Client: Served Hyatt, Marriott, and other major clients to implement Medallia Go.

In this role, I have gained expertise in the Customer Experience Domain (CX), which is extensively oriented towards Hospitality, Healthcare, Credit Unions, Assisted Living, and covers the entire mid-Market segment. I was lucky to gain experience in managing the entire client base that utilizes Medallia Go (Product dedicated for the Mid Market)

- **Leading Project Kick-Off Calls:** Served as the primary point of contact for new client engagements, ensuring alignment on project scope, timelines, and success metrics
- **Client Onboarding:** Guided clients through a structured onboarding process to ensure smooth platform adoption and readiness for implementation
- **Project & Team Management:** Oversaw the implementation team and successfully managed 20–30 concurrent projects across multiple industries, ensuring timely delivery and client satisfaction
- **Implementation & Best Practices:** Collaborated closely with clients to configure the Medallia Go platform according to their business requirements and advised on CX best practices to maximize platform value
- **Platform Training:** Conducted comprehensive training sessions for both C-level executives and frontline users, enabling effective platform utilization and data-driven decision-making
- **Post-Implementation Support:** Provided ongoing client servicing, addressing operational issues, optimizing workflows, and ensuring continued platform engagement
- **Gap Identification & SWOT Analysis:** Partnered with clients to identify performance gaps, conduct SWOT analyses, and develop actionable strategies to improve customer experience outcomes
- **CRM Integrations & Data Operations:** Worked extensively with leading CRMs such as Cendyn, SkyTouch, Salesforce, TravelClick, Opera, and Infor to set up integrations, manage data transfers, and ensure seamless system connectivity

Zensar Technologies

Pune, India

Technical Project Manager/Business Analyst

Jan 2019 - Sep 2020

Client: Large Clothing Brand Contracting to Apple

Working with a team that supports the client's business process. Handling and triaging high-priority customer issues and resolving them. Analyzing functional and technical issues and working with X-functional teams to have the issues fixed. Identifying issues that have roadblocks in the order processing cycle and suggesting fixes, thereby enhancing customer Experience. .

- Enhanced backend microservices with **Python** and **Spring Boot**, boosting system throughput by **30%** and maintaining API response times below 200ms
- Led the delivery of backend modernization initiatives, coordinating cross-functional teams to enhance microservices built with Python and Spring Boot, resulting in a 30% increase in system throughput and improved API performance (<200ms)
- Directed database optimization programs across **MySQL** and **PostgreSQL** environments by managing performance review cycles, defining **SLAs**, and overseeing implementation of indexing strategies to achieve a **25%** gain in query efficiency
- Oversaw the development and deployment of a responsive web platform (**Angular, React**), aligning sprint objectives with business goals and ensuring **40%** faster page load times through effective release management and performance testing
- Established and governed **CI/CD pipelines**, partnering with **DevOps** to implement deployment automation that reduced release times from 60 to 10 minutes while maintaining **99.9%** uptime
- Managed end-to-end payment integration projects (Stripe, Razorpay), coordinating between development, security, and compliance teams to ensure zero-vulnerability deployments and seamless processing for **10K+** monthly users
- Collaborated with data engineering and analytics teams to define requirements for **ETL pipeline** optimization, achieving a 30% improvement in data ingestion speed and enhanced BI reporting capabilities

- Instituted data quality and governance frameworks, driving initiatives that ensured **99.8%** accuracy across financial and operational data sources, exceeding 500K records
- Championed process automation projects, managing requirement gathering, design, and rollout of **Python**- and **Excel**-based automation tools that saved 40 staff hours monthly and improved operational efficiency
- Led **Agile** project delivery through **JIRA** and Confluence, facilitating sprint planning, backlog management, and retrospectives while maintaining transparency across development and business teams
- Monitored and optimized **ETL workflows**, proactively managing risks and incident resolution processes to reduce data pipeline failures by **20%** and ensure timely data availability for stakeholders

HCL Technologies
Network Analyst

Noida, India
May 2018 - Dec 2018

Client: Exxon Mobil Corporation

My role involved assisting global clients with technical issues, ensuring service quality through auditing, and collaborating with cross-functional teams to deliver data-driven insights for network and operations projects. I also contributed to maintaining data accuracy and compliance through automated validation and quality reporting initiatives.

- Provide technical assistance to end clients on issues related to **Office 365** applications like **Outlook, OneDrive, SharePoint, OneNote, Teams, system optimization**, and network-related issues
- Served as a Quality auditor for Service Desk and Collaboration (SharePoint SCA Support and SP Operations)
- Collaborated with cross-functional teams to contribute data-driven insights for major network projects, supporting key business decisions
- Maintained high data accuracy by assisting in automated validation processes, ensuring quality reporting, and compliance with industry standards

PROJECTS

House Prices – Advanced Regression Techniques, Kaggle Competition

- This model aims to predict house sales prices of a local vendor dataset collected from Kaggle. Successfully implemented and evaluated 3 different regression models for predicting house sales prices.
- Utilizing feature engineering techniques to achieve a prediction accuracy of within 2%.

Data Cleaning / Data Exploration in SQL

- Developed a project using statistical and data visualization techniques to analyze and compare COVID-19 case data between waves. Incorporated and analyzed large amounts of raw data using SQL Server, resulting in improved usability for data analysis and extracted meaningful conclusions.
- Utilized Tableau for data visualization and advanced SQL queries, resulting in a 20% increase in data loading speed.

Market Basket Analysis

- Implemented the Apriori algorithm and the Brute force method in Python and compared the Brute force method with the Apriori algorithm on each of the 5 different transaction databases created.
- Presented computation (CPU or clock) time to demonstrate that the Apriori algorithm is an average of 28% faster than the brute force method on each of the 5 transaction databases.

Real Life Implementation of "Digital Image Processing"

- The main objective of the project is to offer a system that simplifies and automates the process of recording and tracking students' attendance through face recognition technology. It is a biometric technology to identify a person from a digital image. Face recognition is widely used nowadays in different areas such as universities, banks, airports, and offices. We will use preprocessing techniques to detect, organize, and verify the captured faces, like the Eigenfaces method. We aim to provide a system that will speed up the attendance process faster and more precisely.
- I've worked on the entire database (maintenance and updating), worked on the frontend, all documentation, and final updates. Technologies used: Matlab, HTML, React JS, PL/SQL, Microsoft Word, PowerPoint, and Excel

Air Traffic Control and Management System

- As part of my training in BEL, I got an opportunity to work on their prestigious project, ATM and ATC. The ATM & ATC is a network of RADARS capable of providing a real-time and accurate air situation picture of high, medium, and low-level RADARS. The project aims at networking all radars in India, regionally at the national level, in an integrated network shared by all the armed services & the Civil Aviation Department.
- My role is to create an SRS document for all the ideas that the client has provided. Here, the coding language used is C++. I created code snippets, ran them separately, and our senior team members tested them, and finally included them in the main source code.
- I've noted down live readings of signal fluctuations. Perform the mathematical operations told by the Senior members. Used to create this report on an everyday basis and send it back to the client team.

SKILLS

- **Databases:** Microsoft SQL Server, MySQL
- **Tools & Libraries:** Excel, PowerPoint, JIRA, Kanban, MS Project, Confluence, Salesforce, Figma, Monday.com, Visio, Slack
- **Data Visualization:** Power BI, Tableau, AWS QuickSight, SAS, Asana
- **Data Science Tools:** Machine Learning, Deep Learning, Data Warehouse, Data Mining, Data Analytics, Big Data, Data Modelling, Visualising, Data Munging
- **PM Frameworks:** Lean, DevOps, Six-Sigma, Risk, Scope, QA/QC, Plan, EVA, Cocomo, Fish Bone
- **PM Methodologies:** Agile, Scrum, Waterfall, Contingency, Gantt Chart

EDUCATION

University of North Texas
Information Systems and Technologies(GPA: 3.6/4.0)

Denton, USA
Jan 2022 - Feb 2023

Uttar Pradesh Technical University
Computer Science and Engineering(GPA: 3.8/4.0)

UP, India
Aug 2014 - Mar 2018
