

SRIHARI KANTADI

srihari.kantadi3@gmail.com • 314-329-5809 • <https://www.linkedin.com/in/srihari-k16/> • Open to Relocate

Professional Summary:

Experienced Network and Security Engineer with over 8 years of expertise in designing, deploying, and managing enterprise networks, IT security, and cloud solutions. Proficient in configuring Cisco, Palo Alto, Fortinet, and F5 devices, as well as managing AWS, GCP, and Azure environments. Skilled in network automation, cloud monitoring, and optimizing large-scale systems for performance and security. A certified CCNA and PMP professional with a Master's in Information Systems (GPA 3.95) and a B.Tech in Electronics & Communication Engineering. Recognized for delivering efficient, secure, and high-performing solutions, with a proven track record of leading complex migrations and network redesigns.

Technical Skills:

Networking Protocols and Fundamentals:	LAN/WAN Architecture, TCP/IP, VPN, VLAN, VTP, NAT, PAT, STP, RSTP, PVST, MSTP, DHCP, DNS, NTP, NDP, TCP, UDP, Network Implementation, Troubleshooting Techniques, NHRP, FTP, TFTP, HTTP, PAP, PPTP, SIP Trunking, SNMP, Routed and Routing Protocols (RIP, EIGRP, IS-IS, OSPF, BGP), MPLS, IPv4, IPv6, Subnetting, VLSM, Static Routing, ICMP, ARP, HSRP, VRRP, Route Filtering, Multicast, 802.11, Policy-Based Routing, Redistribution, Port Forwarding, Arista.
Security Technologies:	PAP, CHAP, Cisco PIX, Blue Coat, Palo Alto, ASA, Fortinet, Checkpoint
Network Management and Monitoring:	Wireshark, QRadar, Splunk, BMC TrueSight Operations Management (Patrol/BHOM), Tenable Nessus, TCP Replay, Wildfire, Infoblox, HP OpenView, Cisco Prime, Security Device Manager (SDM), Cisco Works; TCP Dump and Sniffer; SolarWinds NetFlow Traffic Analyzer, Network Performance Monitor (NPM), Network Configuration Manager (NCM), Savone, SiteScope.
Load Balancers:	F5 Networks (BIG-IP), NetScaler (Citrix)
Firewalls:	Palo Alto firewalls, Juniper Net Screen (500/5200), Juniper SRX (650/3600), Pix (525/535), ASA (5520/5550/5580), Checkpoint,
Wireless Technologies:	Cisco Meraki wireless Access points (MR66, MR74, MR84), Aruba Access points 200, 207,300,320, Wireless controllers 7280, 7240, Cisco Wireless controller 5508, Cisco Aironet 3700 series.
Router and VoIP Platforms	Cisco Routers series 7300, 4000, 3800, 2000, 1900, Avaya products, cisco IP phones
Switch Platforms:	Cisco Catalyst series 2960, series 3560, 3850, 4500, 6500, 7000; Nexus series 2K, Net gear switches,5K, 7K; Nortel/Avaya 5510, 5520; Juniper EX3300, EX4600, EX4300, EX3400
Security Protocols:	Standard and Extended ACLs, IPsec, VPN, Port-security, SSH, SSL, IKE, AAA, Prefix-lists, Zone-Based Firewalls, NAT/PAT, HIPAA standards, Ingress & Egress Firewall Design, Content Filtering (Reverse Proxy), Load Balancing, IDS/IPS, Blue Coat URL Filtering, L2F, IDS, TCP Intercept, Router Security, SNMP trap

Professional Experience:

CATERPILLAR

Jan 2023 – Present

Sr. Network Security Engineer

Sanantonio, TX

Responsibilities:

- Designed and deployed AWS Transit Gateway to centralize network routing and simplify management of inter-VPC communication, improving scalability and security.
- Configured AWS Direct Connect to establish private connectivity between on-premises networks and AWS, ensuring 99.99% uptime for critical workloads.
- Implemented NACLs with custom rules to permit necessary traffic while blocking unauthorized access, strengthening AWS security.
- Utilized Azure Sentinel to collect and analyze security logs from several sources, automating 70% of security incident responses.
- Configured Azure Key Vault to automate credential and key rotation, reducing security breach risks by 40%.

- Deployed F5 Viprion 4000, 2100, and 2150 series to support 10 million+ concurrent connections, improving reliability and load balancing efficiency.
- Implemented F5 iRules to optimize traffic flow, ensuring that 99.95% of customer requests are routed correctly.
- Developed security policies on F5 Viprion to mitigate SQL injection and XSS attacks, reducing web application vulnerabilities by 85%.
- Configured spanning tree protocols (STP/RSTP), VLANs, and tunneling on Arista 7260X, 7050X, and 7132LB switches, optimizing network performance.
- Deployed a multi-pod Cisco ACI architecture across 5 data centers, enabling seamless network expansion, Managed Cisco ACI applications by applying quarterly updates, ensuring the latest security and performance enhancements.
- Implemented automated backups for Cisco ACI network configurations, reducing recovery time by 60%.
- Designed and deployed SD-WAN architecture with Viptela, ensuring 99.98% uptime across various remote locations, Optimized Viptela SD-WAN configurations, reducing latency by 30% for critical applications.
- Developed Python scripts using regex libraries to automate security monitoring, detecting 95% of potential security violations.
- Contributed to the Netmiko project, enhancing network automation for vendor devices, Developed REST API automation tools, increasing operational efficiency by 40%.
- Configured Aruba threat detection and behavioural analytics, reducing security incidents by 35%, Installed Ansible Tower, automating 80% of network security compliance checks.
- Set up permission rules on the administration sites for Cisco Firepower 1140 and 1150 and keep monitoring on both to ensure that safety and connectivity filters are being used properly.
- Configure the active tracking feature of Cisco Secure Firewall 3120 and 3130, which monitors all devices connected and instantly assesses settings.
- Install Infoblox TE 1506-1606 DNS firewall limitations to strengthen the system's protections from efforts at DNS tunnelling.
- Using complementing vulnerability identification technologies from ISEC and doing routine network inspections, problems were successfully identified and fixed.
- Install a DNS server configuration on Cisco routers to provide domain-related resolving tools for network-based applications.
- Set up Net Flow, Syslog, and SNMP tools on Cisco routers for ongoing efficiency and data monitoring to promptly detect and fix network-related problems.
- Working with system architectural teams enabled the creation and deployment of Cisco routers designed with WAN connection in mind, including the Cisco ASR 9901, 9902, 9903 series.
- Configurations of deployed routes for the Juniper SRX 4300 and SRX 4700, which keep an eye on and regulate certain service-layer connectivity.
- Experienced the Cisco Nexus network designs, which included internet appliances and changes from the 5548, 7010, 7018, and 5600 series.
- Adding to the operational area of Cisco Nexus switches and enhancing network management were achieved with the installation of system updates from the Cisco Nexus 9k series.
- Maintaining Cisco Nexus switch installation and servicing for optimal efficiency and compliance with regulations.
- Using thorough instructions that describe how to create VLANs, configure VPNs, and alter FortiGate applications while encouraging staff members to share information and follow security protocols.
- Configuring FortiAP systems is made easy by FortiGate firewalls 7121F, 6500F, and 4400F, which offer strong security and privacy features and safe internet connectivity through Fortinet.
- Assisted with FortiGate firewall maintenance and examination, including irregular safety settings, routing problems, and IPv4 and IPv6 connectivity issues.
- Installing the safety standards on the FortiManager, FortiAnalyzer, and Fortinet firewall, the defensive network as an entire was upgraded.
- Improved detection and supervision skills have been acquired via installing and upholding safety zones and networks on Palo Alto firewalls, including the PA-7080, PA-5430, PA-5250, and PA-3410 series.
- Using the company's central administration platform, Panorama, I tracked and reported on several Palo Alto firewalls.
- Involved in order to analyze the dependability and efficiency of IPsec VPN interactions, deploy the Palo Alto monitoring applications.
- Skilled in using Palo Alto Panorama's event correlation and alerting features to proactively monitor and respond to security incidents.

Responsibilities:

- Installed devices for tracking and generating updated alerts as part of the deployment of Cloud Watch, an ongoing monitoring system for AWS cloud servers and applications.
- Monitoring and track API activity in multiple AWS accounts, installations of AWS CloudTrail were built. Which lead to complete reviews of every action taken within the AWS system.
- Developed thorough information on FortiGate setups, policies, and procedures. This data is an important tool that makes work related to audits easier.
- Experience in securely configuring, maintaining, and managing IPv4 and IPv6 networks using Fortinet FortiGate firewalls.
- Assist in maintaining the permitted bandwidth and giving priority for activities which are essential, customers management rules were created for the FortiGate 4200F, 1000F, 3700F, and 2600F firewalls.
- Improved the security system overall and facilitated the sharing and swapping of threat intelligence between Fortinet devices by integrating the safety network.
- Developed, executed and oversaw Palo Alto firewall policies to guarantee stringent adherence to safety standards and effective internet connection management.
- Working Palo Alto firewall policies were installed, and firewall logs were meticulously reviewed using Panorama to provide thorough security monitoring.
- Adding and updating the Network secure Tracking and Security System via Palo Alto PA-7080, PA-5280, and PA-3260 has enhanced defences against advanced assaults and increased ability to recognize and eliminate network-related dangers.
- Experienced in deploying Palo Alto Networks Global Protect VPN solutions to provide secure remote access for employees and partners.
- Developed and put into use an OOP-based Python program for organizing and assessing data pertaining to security that was collected from various sources.
- Working with Arista switches from the 7800R3, 7280R3, and 722XPM series, I deployed regular monitoring and real-time efficient monitoring data gathering tools.
- Installed cutting-edge Cisco Meraki safety appliances with capabilities like data extraction and risk assessment to offer a thorough safe network framework.
- Configure vEdge routers and vSmart PCs to communicate securely using IPsec in order to provide secure SD-WAN connection.
- Developed Viptela SD-WAN to enable secure VPN connectivity by reducing the amount of knowledge transferred across network overlays.
- Designed SD-WAN Viptela structure, which contained BGP and other adjustable routes, was used to set up vManage.
- Improved privacy and security for cloud-based assets by using Azure Multi-Factor Authentication (MFA) with Azure AD restricted access settings.
- Designed Azure Policy defines to regulate resource name and tagging standards, guaranteeing adherence to legal and corporate security requirements.
- Added Portal Security and WebTop configurations, watched iRules for activity adjustment, and observed F5 Viprion APM discussions.
- Installing SSL traffic on internal systems and configuring up iRules for SSL outsourcing, online coding, and protected administration on F5 devices 2200, 4480, and 4200.
- Improved the F5 Viprion ADC's efficiency and made adjustments to handle expanding software needs and meet stringent SLAs.
- Designed and managed the application-centric dividing, managed contracts, and integrated external security measures for Cisco ACI security needs.
- Using Cisco ACI network monitoring data, abnormal traffic flows and efforts at illegal internet access were found, helping to facilitate the timely handling of problems and their fixes.
- Improved adaptability and safety Cisco ACI fabric was created to facilitate the deployment of internet more quickly and to provide multi-tier service isolation security measures.
- Implementation, and oversight of Active Directory, which facilitates the easy management of identities, rights, and authentication capabilities across networked enterprises.

- Integration of ISEC into the system's structure aimed to improve safety procedures' effectiveness by utilizing teams from various roles.
- Implemented Infoblox Grid™ to automate IP address allocation, DNS resolution, and DHCP lease management, reducing manual errors and improving network reliability.
- Configured Cisco ISE posture assessment and remediation capabilities to ensure compliance with organizational security policies and regulatory requirements (e.g., HIPAA, PCI DSS) for endpoint security.
- Applying CIS standards to Cisco router ASR 902, 902U, 903, 1009, and 1001 designs to improve safety and adherence to regulations.
- Configure and run Cisco routers' firewall rules and access control lists (ACLs) to impose high standards for network safety and thwart unauthorized assaults.
- Using tools to conduct routine security inspections and analyses of Cisco router problems, such as security methods and Cisco IOS safety auditing solutions (Auto Secure).
- Setup the Cisco Firewall 3110 and 3105 systems, which offer cutting-edge attack protection and efficient access management.
- Installed and configured the risk analysis controller for Cisco Firepower 1010 and 1120, enhancing the system's capacity to identify threats and respond quickly.
- Implemented service taps on Cisco Nexus 7018, 7010, 5548, and 5600 switches to send traffic to secure systems for intense packet analysis, enables the detection and averting of attacks in real time.
- Experience with Cisco Nexus data centre encourage with an emphasis on promptly and effectively addressing problems relating to efficiency, connection, and design.
- Improved to the core Layer 2 and Layer 3 features of Cisco Nexus switches reduced network delay and sped up data delivery.
- Develop extensive rules and regulations for Juniper SRX 1600 and SRX 2300, guaranteeing legal compliance and promoting information exchange.
- Apply Python scripts for tracking efficiency of system activities to assure safety and reliability, address problems, and interface with Netmiko apps.
- Using Ansible automation software to establish firewall and connectivity rules throughout the structure of several customer sites, the REST API of a next-generation system was installed.

Charter Communications

Oct 2019 – May 2021

Network Security Engineer

Denver, CO

Responsibilities:

- Knowledge of the Palo Alto firewall PA-3220, PA-1420, PA-850, and PA-460 series; proficiency in data safety, managing networks, and associated technical fields.
- Working experience with VLAN setup, routing, and layout principles; understanding configuring and troubleshooting Cisco security products, including the ASA 5500, 5540, and 5515/PIX.
- Integrated proxy status data to Blue Coat ProxySG 600 and 900 devices to monitor and filter online behavior, preventing access to risky websites and imposing guidelines that are suitable.
- Implemented, and managed Check Point firewall R76, R77, and R77.30 services to safeguard corporate networks against intrusions, maintain adherence to security requirements, and guarantee legality.
- Experience in identifying certain internet connections and abnormalities by using Wireshark's filtering and screening functions.
- Assistance with the deployment of NetScaler data storage and load balancing to increase service accessibility.
- Worked with group network administration, managing and tracking Cisco Router 1900, 2900, and 3900 according to business requirements.
- Implemented a set of software that allow load-balancing devices for F5 networks, such as the BIG-IP 2000, 4000, and 5000 series, to be set up entirely automatically.
- Expertise in utilizing Tetration's data analysis and deep learning skills to spot unusual system activity and security threats.
- Performed administration including creation and managing VLANs, Port Security, Trunking, STP, Inter-VLAN routing, LAN security etc.
- Configured Routing protocols such as RIP, OSPF, EIGRP, MPLS static routing and policy base routing.
- Performed Switching Technology Administration including VLANs, inter-VLAN Routing, Trunking STP, RSTP and Port Aggregation & Link Negotiation.

- Managed the F5 BIG-IP GTM/LTM appliances to include writing iRules, SSL offload and everyday task of creating VIPs.
- Worked on replacing Checkpoint VPN and Bluecoat proxy with Zscaler and worked on implementation Zscaler in Production.
- Assist to provide reliable and safe communication across widely scattered sites, Silver Peak included Edge Connect units employ a range of transit technologies, including as MPLS, the web, and LTE.
- Involved in order to identify and address privacy and efficacy problems before they got out of hand, we collaborated with Solar Winds to develop customized reports and warnings.
- Designed with oversight to guarantee compliance with corporate guidelines and the detection and resolution of cable problems.
- Developing and deploying security-related devices, including VPNs, antivirus programs, and client oversight, Terraform guidelines must be used.
- Used to assist TrustSec installations and resolve policy-imposed problems in order to keep the network safe.

HSBC

Mar 2018 – Sep 2019

Network Support Engineer

India

Responsibilities:

- Monitoring of internet connection data, efforts to fill webpages with TCP SYN were detected. The TCP bandwidth limiting was put in place to stop the attack.
- Expertise in organizing, configuring, and managing DNS architecture; proficiency in creating, organizing, and optimizing server DNS.
- Set up and maintain complex LAN/WAN architectures using routing protocols including BGP, RIP, OSPF, and EIGRP.
- Designed ACLs, VLANs, troubleshooting IP addressing issues and taking back up of the configurations on switches and routers.
- Configured test scripts, created network record-keeping, deployed new branch network systems, and fixed network problems.

Education:

Masters in Information Systems

Jan 2023- May 2024

Saint Louis University, Saint Louis

GPA: 3.95

Bachelor of Technology in Electronics & Communication Engineering

Aug 2014 – May 2018

Jawaharlal Nehru Technological University, India

Certifications:

- Cisco Certified Network Associate (CCNA)
- Project Management Professional (PMP)
- Advanced Excel Formulas and Functions – LinkedIn Learning (VLOOKUP, XLOOKUP, PIVOT TABLES)
