Salesforce.com Technologies	Salesforce Lightning – Lightning Components, Lightning Experience, Salesforce Automation/Configuration – Flows, Process Builder, Workflows, Approval Process, Email Templates, Formulas, Validation Rules Sharing and Security - Sharing Rules, Roles, Profiles, Permission Sets and Permission Set Groups Force.com Platform – Apex, Triggers, SOQL, SOSL Sales Cloud – Lead Management, Account Management, Contact Management, Opportunity and Quote Management Service Cloud – Service Console, Case Management Data Migration - Data Loader
Packaging and Deployment Tools	Salesforce DX (SFDX), Copado CICD, AutoRabit CICD, Flosum, Workbench, Visual Studio Code (VS Code) IDE, GitHub, Bitbucket, Managed and Unmanaged Packages, Change sets, ANT Migration Tool

EXPERIENCE:

Salesforce Release Engineer | **The Cloud Fountain, MA** Dec 2023 – Present

Cloud Fountain is a leading provider of IT solutions for business including IT support, hosting and software development.

As part of my role, I am working with a Travel company, guiding them through the establishment of their Release Process from scratch. This involves a comprehensive understanding of their existing procedures and seamless collaboration with various cross-functional teams to ensure smooth deployment processes. I manage multiple Salesforce environments and ensure the synchronization and consistency of metadata and data deployments. I oversee code reviews, test executions, and security scans within the CI/CD pipeline. Additionally, I implement rollback strategies and restore data and metadata in case of deployment failures. I also document best practices to enhance our release processes and improve overall efficiency.

Salesforce Release Manager/ Consultant | **Blue5Green, NJ** Oct 2018 – Dec 2021

Blue5Green is an IT Services Company that has a dedicated practice for Salesforce DevOps implementation, Salesforce Development, Financial Services Cloud, and Managed Services.

As part of my role, my responsibility is to work with our customers to gather functional and technical requirements in coordination with Technical Leads/Architects. And configure Salesforce Applications using Salesforce out-of-the-box features and best practices to meet our customer needs and help them implement the Salesforce DevOps process using the Copado CICD Tool. During my term with the company, I supported its multiple clients to deliver their Salesforce and Copado-related projects.

Below are some of the key clients I supported during my tenure at Blue5Green:

➤ **Salesforce Release Manager/ Consultant | Practicing Law Institute (PLI)**

As a Release Manager, I specialized in designing and implementing Salesforce DevOps processes, CI/CD pipelines, and deployment strategies across various clients.

My role encompassed:

- Setting up and maintaining deployment pipelines using tools like Copado and Flosum.

- Integrating version control systems (e.g., GitHub) and ALM tools (e.g., JIRA) to streamline development workflows.
- Performing pre/post-deployment activities, back promotions, and ensuring consistency across Salesforce environments.
- Automating manual processes using Flows, Validation Rules, and converting legacy Process Builders.
- Resolving build issues, managing merge-conflicts, and ensuring smooth migrations from development to production environments.
- Supporting metadata and data migrations, creating data models, and implementing business process automations.

Key Clients Supported:

- Practicing Law Institute (PLI)
- Manulife
- State of Vermont (SoV)
- Valley National Bank
- Comerica Bank
- Guild Education

➤ Copado Implementation Engineer | **Guild Education**

Guild Education is a private company that works for Fortune 1000 companies to manage their education assistance benefits. As part of my role, I was responsible for gathering DevOps process requirements and performing salesforce customizations based on clients' needs to configure the Copado tool in their org. I provided hands-on training based on their persona-based teams.

Junior Engineer | NCC Ltd.

Aug 2014 – Feb 2016

NCC Limited is a Construction Company in which I worked as a Junior Engineer in the IT Department. As part of my role, I was responsible for understanding the functional process requirements and testing them in their ERP System. Performed manual testing of the new processes that are developed in ERP systems, gathered the data from various project sites and converted them to the required formats, monitored daily procurement testing in ERP, and generated MIS reports for various departments.
