

Senior Engineering, Quality, & Supplier Quality Management

Resourceful and highly analytical professional with 15+ years of leadership in supplier quality and management, engineering, and quality engineering, complemented by robust leadership in operations.

- Demonstrated success in driving operational excellence and supplier performance through targeted supplier management strategies and quality enhancements.
- Recognized for implementing cost-effective solutions and engineering practices to improve product quality and process efficiency, significantly boosting profitability.
- Skilled in leading cross-functional teams in development and execution of advanced quality assurance systems and engineering solutions that ensure compliance with industry standards and minimize risks.
- Instrumental in spearheading initiatives that strengthen supplier relationships, enhance supply chain resilience, and achieve sustained improvements in product quality and customer satisfaction, resulting in higher client retention rates.

Areas of Expertise

- Global Procurement Strategies
- Vendor Relationship Management
- Lean Management Principles
- Regulatory Compliance Oversight
- Quality Control Systems
- Logistics Network Optimization
- Inventory Management Efficiency
- Cost Reduction Initiatives
- Cross-Functional Team Leadership
- Supply Chain Resilience
- Product Quality Enhancements
- Risk Management Protocols

Professional Experience

Axiux Group, Wichita, KS
Contractor – DoD

2024 — Present

Oversee development and implementation of advanced manufacturing processes to meet defense specifications and standards. Maintain consistent coordination with cross-functional teams to ensure seamless integration of new technologies and materials into existing systems. Test and validate manufacturing methods to enhance product reliability and compliance with military requirements.

Key Contributions/Achievements:

- Enhanced profitability by 25% through strategic evaluation and implementation of process changes, optimizing cost to manufacture parts and monitoring on-time delivery.
- Assessed company equipment and personnel capabilities that streamlined process flow, reduced manufacturing time/expenses.

TNT Machine, LLC Wichita, KS
Director of Production and Engineering

2019 — 2024

Streamlined engineering modifications and enhanced customer communication by conducting detailed reviews of customer-supplied specifications and recommending necessary changes. Optimized project coordination and streamlined operations by directing process and program management activities. Identified and capitalized on growth opportunities by researching new technologies and equipment, analyzing return on investment, and presenting findings to stakeholders.

Key Contributions/Achievements:

- Boosted process efficiency by at least 30% through championing multiple improvement initiatives, leveraging extensive manufacturing and assembly expertise.
- Increased company profitability by developing and implementing standardized processes, work procedures, and training programs that ensured product repeatability.
- Improved process flow and delivery by leading quality investigations and coaching teams in root cause analysis.
- Exceeded lead time expectations and improved operational throughput by managing daily evaluations of capacity, capability, and scheduling.
- Strengthened supply chain reliability and performance by traveling to offsite locations for supplier development and quality initiatives.

Boosted annual revenue by overseeing Engineering and Operations support teams that managed complex machined aerospace components, involving NC programming, planning, manufacturing engineering, NPI, quality engineering, cost estimating, budgeting, resource management, document control, and safety. Ensured high-quality product delivery by interpreting and applying customer-supplied engineering data effectively and efficiently.

Key Contributions/Achievements:

- Reduced defective product rates by streamlining process development for Engineering and Quality Engineering organizations, enhancing product quality and compliance.
- Eliminated recurring issues and improved process reliability by conducting thorough Root Cause Corrective Action (RCCA) and Quality investigations.
- Increased workflow and efficiency by up to 15% through strategic evaluations of capacity and capability, optimizing overall operational throughput.
- Achieved cost reductions and improved output efficiency by enhancing process operations and resource utilization.
- Maximized optimization gains by analyzing and enhancing use of tools and equipment that improved production efficiency.
- Strengthened supplier relationships and enhanced supply chain quality by actively participating in Supplier Development and Quality activities through frequent offsite travel.

PCC/Weaver Manufacturing, Wichita, KS
NC Programming Manager

2010 — 2017

Enhanced production efficiency and consistency by developing and standardizing processes for individual part manufacturing. Ensured production alignment with capabilities by analyzing customer-supplied engineering, drawings, and Model-Based Definitions. Cut processing time by optimizing part programs for maximum efficiency. Optimized operational performance and sustainability through continuous improvement initiatives.

Key Contributions/Achievements:

- Improved team expertise and reduced error rates by leading and training NC Programming team.
- Boosted operational efficiency and minimized waste by reviewing and streamlining manufacturing processes.
- Decreased repeat issues by performing Root Cause Corrective Actions and implementing Corrective Actions.
- Enhanced product quality and throughput by managing ongoing process improvements.
- Increased precision and reduced setup times by designing layouts and tooling, and programming parts.

Additional Experience: *Shop Supervisor*, Gamma Engineering Mansfield, TX, as *Lead Machinist*, JMAC Tool Fort Worth, TX, as *Lead Machinist*, Excel Manufacturing Wichita, KS, and as *Shop Manager*, Anderson Racing Nashville, TN.

Education & Credentials

Professional Career Advancement Courses in Engineering Design

Wichita State University/National Institute for Aviation Research

Professional Development: Effective Management Course | ISCAR Metalworking | Advanced Blueprint Reading | GD&T | RCCA/CA | Six Sigma Events | Kaizen | Lean Manufacturing

Technical Skills: Catia V5 | Microsoft Office | Vantage | Citrix | JobBoss | MRP | ERP
