WRIGHT

Engineer

SUMMARY

Results-driven **Senior Software Engineer** with **7+ years of experience** in full-stack development, cloud-native architectures, and real-time data streaming. Expertise in designing and building **scalable, high-performance applications** using **React.js, Node.js, AWS, and microservices**. Proven ability to optimize API performance, implement event-driven systems, and deploy secure, cloud-native applications. Adept at **CI/CD, DevOps, and infrastructure automation** for seamless software delivery.

PROFESSIONAL EXPERIENCE

SALESFORCE

Senior Software Developer

Feb/2020 - Mar/2025

- Led development of a performant, accessible **React.js** micro frontend for patient insights and care coordination, integrating **D3.js, Recharts, and Chart.js** for dynamic, real-time visualizations.
- Built a real-time tracking dashboard using **Next.js** for monitoring patient status and care journeys — reducing response time by 20% and enabling logistics-style care coordination.
- Engineered modular microservices to support discharge triggers, task routing, and secure patient communications using **Python/FastAPI** and **Node.js** — reducing manual intervention by 30%.
- Developed event-driven workflows using **Kafka** and **RabbitMQ** to enable low-latency updates and asynchronous communication between distributed care systems.
- Architected scalable cloud-native solutions using **AWS (EC2, Lambda, RDS, S3, SNS)**, ensuring **HIPAA** compliance and high availability in a mission-critical care coordination system.
- Built high-performance, concurrent services in **Go** with **gRPC** to handle large-scale, real-time processing of patient events and telemetry — increasing throughput by 40%.
- Integrated Generative AI tools like **OpenAI** and **Einstein GPT** to auto-summarize patient histories, generate proactive care plan suggestions, and enable context-aware chatbot support.
- Designed a centralized observability pipeline using **Datadog** and **ELK** stack to track workflow reliability and system health, improving incident response and auditability.
- Leveraged **Docker** and **Kubernetes** for scalable container orchestration, with optimizations in query performance via advanced indexing and partitioning strategies.
- Collaborated with **cross-functional** teams including clinicians, product owners, and data scientists to implement end-to-end care coordination features, improving patient outreach effectiveness by 25%.

APPLE

Software Engineer

01/2019 - 02/2020

- Developed an internal real-time streaming dashboard using **React.js, TypeScript, and Node.js** to surface actionable insights for editorial and operations teams.
- Designed and implemented geospatial data overlays to visualize region-specific content performance and editorial reach.
- Optimized backend services in **Node.js** for high-throughput event processing, increasing request efficiency by 50%.
- Built event-driven, serverless workflows using **AWS Step Functions, Lambda, and S3** to automate editorial pipelines and reduce manual effort.
- Implemented **GraphQL** APIs to streamline frontend queries and eliminate data over-fetching, boosting frontend responsiveness by 30%.
- Integrated scalable messaging queues and triggers using **RabbitMQ** for real-time editorial alerting.
- Delivered robust test coverage with unit and integration tests (**Jest**), resulting in a 30% drop in production incidents.
- Enhanced deployment reliability and scalability with **Docker** and **Kubernetes**, leading to a 25% infrastructure cost reduction.

SKILLS

Front-End: React, Next.js, TypeScript, Angular, Redux, Context API, D3.js, ApexCharts.js, Material UI, Tailwind, Bootstrap

Back-End: Node.js, Express, Nest.js, Python/FastAPI, Golang, GraphQL, REST, gRPC, Kafka, RabbitMQ, OAuth, JWT

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis

Cloud & DevOps: AWS (EC2, Lambda, S3, RDS, SNS, Step Functions), Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, CircleCI

Testing: Jest, React Testing Library, Cypress, Playwright, Pytest

Architecture: Microservices, Micro-Frontends, Event-driven, Serverless, Monorepo

Other Tools: Mapbox GL, WebRTC, Stripe, React Query, Apollo, Swagger, Figma, Datadog, Amplitude, PagerDuty, Jira, Git

EDUCATION

University of New Hampshire - Bachelor's in Computer Science

2017 - 2019
