

TARUN KUMAR BOSUPALLY

Data Engineer

Dallas, Tx | tarunkumar87645@gmail.com | +1 (940)-535-4548

SUMMARY

Experienced Data Analyst with over 5+ years in data modeling, analysis, and business reporting using Tableau, Power BI, Smartsheet, and SQL/PLSQL. Proficient in Python, R, and data visualization tools, with hands-on experience in machine learning, statistical modeling, and working with large, complex datasets from databases like MS SQL Server, Oracle, Amazon Redshift, and PostgreSQL. Skilled in building interactive dashboards, developing SQL queries, and data science libraries such as Pandas, NumPy, Scikit-learn, ggplot2, and Shiny. I am familiar with AWS Data Lake, SPSS, Jupyter, and project management tools like JIRA, Rally, and MS Project. Experienced in Agile and Waterfall methodologies, unit testing, and performance/regression testing of business applications.

SKILLS

Data modelling Tools: ERwin, Power Designer

Methodologies: SDLC, JAD Sessions, Ralph Kimball Methodologies

Databases: Oracle, MS Access, SQL Server, Teradata ETL

Tools: Informatica PowerCenter

Programming Languages: SQL, PL/SQL, R and Python

ETL Tools: SSIS, Azure Data Factory (ADF)

BI / Reporting Tool: Tableau (Desktop, server and online), PowerBI, Smartsheet, MS Excel

Databases (RDBMS): MS SQL Server, Amazon Redshift DWH, PostgreSQL, MySQL, Microsoft Access, Oracle, MS Azure SQL Database (PaaS).

EDUCATION

Master of Science in Data Engineering (Jan 2023 – Dec 2024), University of North Texas, Denton, USA

Bachelor's in computer science and engineering (Aug 2014 – May 2018), KMIT, India

EXPERIENCE

Data Engineer | UF Health, Jacksonville, FL

Jan 2024 – Current

- Added value to Digital Manufacturing Data Products by contributing as an Insights Data Analyst building business driven sourcing solutions based on Business users' requirements.
- Data Stack typically includes - AWS, Snowflake, DynamoDB, S3, RDSs, AI & ML Data exploration, RPA-corelations & causations, Spark SQL, SQLs, Data Modeling, Tableau, Excel.
- Communicated data analytic finds for Digital Manufacturing, Audit Data, Distribution Centers analysis etc.
- Design Review contributor to cross functional technical teams and communicating technical finds to Visualizations Developers.
- Investigate Data Quality issues and generate presentable narratives based on biases possible due to incompleteness of data.
- Good Understanding of Data ingestion, Airflow Operators for Data Orchestration and other related python libraries.
- Worked on Python APIs calls and landed data to S3 from external sources.
- Analyze Machine Data and create excel visualization plots as a story narrative for Business Users and Product Owners.
- Used Tableau and Excel for Visualization charts etc. and regularly communicating finding with Product Owners.
- Worked with Data Engineers and Data Scientists to help and understand the gaps between the Product Integrity Datasets and Digital Manufacturing by leveraging the Advanced Analytics.
- Worked on Tableau Visualization Charts and daily status Dashboards.

- Worked in an Agile Environment and indulged in Design Review and End-to-End UATs and assisted QA in automating test cases.
- Unit testing, UAT testing and End-to-End automation design review.

Data Engineer Intern | Paycom Software Inc., Dallas, TX

May 2024 – Dec 2024

- Built & supported Azure Analysis Services (AAS) models for retail sales, POS, and corporate forecast data.
- Developed PySpark ETL pipelines on Azure Databricks, delivering enterprise-grade data to BI & Data Science teams.
- Collaborated with cross-functional teams including Solution Architects, DevOps, and Data Scientists for accurate data product delivery.
- Utilized Azure Data Lake Storage (ADLS), Azure Data Factory (ADF), and Azure Automation Accounts for end-to-end pipeline orchestration.
- Designed dimensional models & normalized data for AAS Tabular Models, enabling Power BI reporting.
- Applied DAX, MSBI, and SSAS for modeling and business intelligence solutions.
- Managed Azure Active Directory (AD) & IAM Security Groups, associating object IDs via CI/CD pipelines.
- Used GitHub and Azure DevOps Repos for version control with solid branching strategy knowledge.
- Scheduled jobs using Tidal Scheduler for automated pipeline triggering.
- Ensured data governance, forecast accuracy, and security compliance across the full data stack.

Research Assistant | University of North Texas, Denton, Tx

May 2023 – Apr 2024

- Built high-performance ETL pipelines using Apache Kafka, Avro, DBT, and Snowflake, ensuring seamless data processing and storage.
- Designed real-time data streaming solutions to process email data from Microsoft Graph API, enabling scalable and efficient ingestion.
- Developed and optimized SQL queries for large datasets, ensuring fast data retrieval and query performance tuning.
- Managed configurations using YAML and JSON, ensuring consistent and scalable deployment across environments.
- Engineered asynchronous data processing using Kafka consumers and producers, improving data flow efficiency in distributed systems.
- Developed APIs for integrating AWS services and third-party tools, optimizing data retrieval and storage.
- Implemented data privacy and governance protocols, ensuring compliance with industry standards for secure data handling.

Data Analyst | Aceteq Web Services Pvt Ltd, Bengaluru, India

Aug 2018 – Dec 2022

- Designed and implemented scalable ETL pipelines using Apache Kafka and Python, ensuring seamless data ingestion and transformation for real-time analytics.
- Developed and optimized RESTful APIs and microservices to support high-traffic applications, improving system performance and maintainability.
- Designed high-performance SQL queries and optimized database structures, ensuring efficient storage and retrieval of structured and unstructured data.
- Developed full-stack web applications using Angular, React, and Django, improving UI/UX and overall user experience.
- Led the migration of legacy data workflows to Apache Spark, reducing processing time by 40%.
- Implemented data governance policies, ensuring data security, compliance, and privacy standards were met.
- Automated data validation and quality checks, improving data accuracy and reliability across multiple applications.
- Containerized applications using Docker for seamless deployment and scalability.
- Collaborated with cross-functional teams to integrate data pipelines with business intelligence tools like Tableau for real-time reporting.
