## EXECUTIVE SUMMARY

- Accomplished **Oracle ERP Cloud PPM, Grants and Resource Management Solution Architect / Functional Lead** with nearly **17** years of global experience across diverse industries including public and private sectors clients including Leasing, Professional Services, Transportation, Water, Defense, Aviation, Oil & Industrial Gases, Engineering and Construction, High Technology etc.,
- Proficient in Oracle ERP and EBS PPM, including Grants and Project Execution and Resource Management, Project Driven Supply Chain (PDSC), Procurement, Finance and SCM Cloud modules.
- Certified in Oracle Cloud ERP, EBS and Project Management (PMP, Agile Scrum PSPO, and PSM), with a strong focus on leading and managing successful ERP implementations.
- Expensive experience in conversions from Oracle and other third-party systems such as Coupa, Navision, Workday, Viewpoint, several payroll and time entry applications (Kronos UKG), Concur, HCM, SCM PeopleSoft, Primavera P6, JD Edwards, Primavera, Mainframes systems, Oracle EBS, Expense claims systems, in-house built systems etc., data into Oracle cloud PPM.
- Led end-to-end cloud-based ERP transformations, including migration from legacy systems across finance, procurement, and student services domains. Experienced in managing multi-departmental requirements gathering and business process mapping, particularly in higher education and public sector settings.
- Expert in business requirements analysis, solution mapping, and end-to-end implementations, ensuring alignment with client needs and driving operational efficiency.
- Specialised in integrating third-party applications and migrating legacy ERP systems to Oracle, delivering seamless transitions and optimised workflows.
- Experienced in both Waterfall and Agile project management methodologies, with the ability to apply and adapt to hybrid strategies for complex projects.
- Proven track record in leading ERP projects from inception to completion, emphasising efficient customizations and innovative solutions tailored to client-specific environments.
- Global MBA holder from a top-tier UK university, bringing a strategic business perspective to technical implementations.
- Monitor for up-to-date product updates for new features in Oracle Cloud, especially in PPM space.
- Strong communicator and problem solver, fostering collaboration across cross-functional teams along with expertise in Oracle Consulting Service delivery model and driving projects to success.

## KEY SKILLS

• Implementation and solution design • Business process analysis and design • Specialty consulting • Experience in working with Oracle Consulting Services (OCS) model • Training end users and internal teams • Digital & IT projects, products, and operations management in Agile and Waterfall • Product ownership • Requirements gathering, CRP, workshops, Gap analysis (as-is/to-be), solution design, sign-offs, and functional testing • Client-facing • Data management • System improvements • Data conversions, master and transactional data management, dependency analysis, legacy ERP to Oracle Cloud migration, In/Out interfaces, and reports • Legacy tools inspection, rollouts, and migration • Risk planning, traceability matrix, RASCI matrix, project planning, cut-over planning • Custom solutions management and support • Debugging RICE components and issue resolution • RCA and recommended solutions • Communication across all levels (users, technical teams, management) • Project functional documentation, user stories, product backlog, sprint backlog, functional specs, plans, reports, risks, changes, configurations, test cases (SIT/UAT), user manuals, lessons learned) • Change management • Team work allocation • Application development and management • Cross-functional collaboration (business partners, developers globally) • Vendor, stakeholder, and customer relationship management • Thoughtful leadership • Problem-solving • Conflict and risk management • Proven reliability • Innovation • Task ownership •

## TECHNICAL SKILLS

- **ERP cloud apps:** Oracle Cloud ERP PPM (*Project Financial management incl. project costing, Budgeting and Forecasting, Billing, Project Execution management, **Contracts Management, Grants Management** including key features like Budgetary Controls, Encumbrance Accounting*), Project portfolio analysis, Billing and Revenue management, Budget and Encumbrance Control, Forecasting, Scheduling, Oracle PDSC (Project-Driven Supply Chain) Cloud, Oracle Inventory Management Cloud, Oracle Procurement Cloud, Financials Cloud, Oracle EBS 12.x.x Projects Accounting (Costing, Billing), Planning & Control, Portfolio Analysis, Project Contracts, Resource Management (Resource forecasting & planning, Supply & demand balancing, Role-based staffing, Resource calendars and availability), Collaboration, Analytics, resource utilization, capacity planning, and project delivery performance) and integration with other financial and procurements modules such as AP, AR, FA, GL, P2P (i-procurement, purchasing), Sourcing, Procurement Contracts, Supplier Lifecycle Management, iSupplier Portal, Oracle Time & Labor, i-Expenses, HCM (resource profiles), Primavera P6, Subledger accounting (SLA), ASC, IFRS 15, Oracle Guided Learning (OGL), SOX and compliance controls for audit.
- **Data Migration:** Data extraction and conversion experience from Mainframe systems to Oracle Cloud, FBDI templates, Import mgmt, ADFdi, Data migration strategy dev., Fusion Data Intelligence (FDI), Tools & Scripts usage.
- **3rd party app integrations with ERP:** Mainframe CPAS (Capital Project Accounting System), PRINTS, PRINTS AUX, Navision, Concur, UKG (Kronos timesheet system), Coupa, Workday, Service Now, Google AppMaker, AWS Cloud front, Helios, Salesforce, PeopleSoft, Bigger, Viewpoint, and several other in-house built applications.
- **SDLC project/program/service operations methodologies:** Agile Scrum, Waterfall, Hybrid styles, ITIL V4, DevOps & Kanban boards.
- **Reporting tools:** Apex, Oracle Analytics Publisher, OTBI, Business analytics, Smart view, PowerBI, Hyperion, ODBI & in-house tools, Oracle Business Intelligence Enterprise Edition (OBIEE) or Oracle Analytics Cloud (OAC).
- **Middleware:** AWS, Oracle cloud, Rest APIs, TCP, PGP/H2H with SWIFT & encryption processing.
- **Productivity tools:** Microsoft (Visio, Redwood Visual Builder, MS project, excel, VBA, powerpoint etc) & Google suite of apps, AODocs, Draw.io, DocuSign, BPM, Data flows, UML.
- **Operational and project mgmt. tools:** JIRA, Trello, SharePoint, HP Quality Centre, Smartsheet, MS Suite, Smartsheet, Project Library and Service Now.
- **IT infra awareness:** OCI Cloud, Servers, storage, networks and security knowledge, private/public/hybrid cloud technologies, SSO login, AD, network security designs, cloud solutions, services and apps security.
- **Other technologies:** PL/SQL, XML and HTML, relational databases, web services (SOAP, REST, WSDL, XML and other API standards), API-driven design, messaging patterns and application development best practices, design & development of cloud based applications and enterprise integrations, leveraging Visual Builder, Java & Database Cloud Services.

## CAREER HISTORY

### StarGroup Innovations LLC | USA

24 Oct 2024 - Till Date

Headquartered in Delaware with a business office in New Jersey and Austin, specialises in technical consulting and staffing for Oracle Cloud ERP and AI driven solutions.

Client Name: NJ Transit

04 Nov 2024 - Till Date

Project Name: Oracle Cloud Implementation

- Leading the implementation and support of Oracle Fusion PPM modules, with a primary focus on Grants Management, Project Costing, Billing and Revenue Management, and Resource

Management as **Oracle Fusion Cloud PPM, Grants & Resource Management Lead** / Senior Solution Architect.

- Analyse data extraction requirements, assist tech team in develop/revise scripts to extract legacy systems data (such as CPAS) and convert them into Oracle via FBDI & Import mgmt.templates.
- Review extracted data & ensure data mapping is accurate & fit into latest PPM solution designs.
- Assist users in confirming extracted data is good-to-go and aid in pre/post recon. activities.
- Conducting requirements gathering sessions, configuring the system, and customising Oracle PPM solutions to align with the client's requirements.
- Analyse current legacy system reports and interfaces and design best-fit to-be RICE components which ultimately fit into PPM revised solution design in Oracle cloud.
- Overseeing system integration between Oracle Fusion PPM and other Oracle modules such as HRMS, Financials, and Procurement to ensure seamless fund accounting processes.
- Providing ongoing user support, troubleshooting issues, and delivering training sessions to ensure the effective use of Oracle PPM modules.
- Developing and executing test plans, coordinating pre-UAT, UAT and cut-over activities and resolving any issues identified to ensure optimal system functionality.
- Offering strategic solutions to improve cost mgmt, forecasting, and proj. scheduling efficiencies.
- Collaborating with technical teams to utilise REST APIs and Web Services for efficient data exchange and system integration.
- Designed and validated several process customizations such as 72-hour rule, Retainage, Mass transfer costs to other contracts and projects, Auto-clear unearned award costs to regular awards when funds received, all pledges automations, compliance reports designs, GL to PPM interfaces for Payroll, expense claims, P-Cards etc and auto-update project status based on certain conditions, Accrual process automation etc.,

| Project Achievements |                                                                                                                                                                                                       |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ✓                    | Led data transformation from legacy mainframe system to Oracle Cloud PPM & Grants, including design analysis, FBDI prep, and successful migration of thousands of projs., grants, contracts, & costs. |
| ✓                    | Created complete E2E test cases covering all client scenarios—first-time effort in this implementation.                                                                                               |
| ✓                    | Streamlined 135+ legacy reports to 55+, saving development time and cost.                                                                                                                             |
| ✓                    | Designed a custom grant and capital projects performance dashboards and key PPM customizations.                                                                                                       |
| ✓                    | Bridged Oracle product gaps and supported solution readiness across modules.                                                                                                                          |

| <b>Project Role</b>         | Senior Solution Architect - Cloud PPM Lead                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Duration</b>             | 04 Apr 2024 - 04 Oct 2024                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Applications Covered</b> | Oracle Cloud PPM including Project Financial management, Resource management, Project Management, Execution management and resource management, Award and Grant Management, Financials, Procurement, SCM Cloud including Project Driven Supply Chain (PDSC), Inbound and outbound Integrations from third-party systems, such as Kronos UKG, and work with OTBI, Project Data conversions, Import Management for Enterprise Contracts Management, including all data conversions, and Several other CEMLI components such as custom reports and interfaces. |

- Provide consulting for Oracle Cloud ERP implementation in Project Portfolio Management including Grants and Execution Management, and Financials focusing on Project-Driven Supply Chain processes.

- Analyse current and emerging technologies to recommend business-enhancing solutions that improve operational efficiency and ensure valuable IT investments.
- Propose business process improvements based on ERP capabilities to optimise workflows and reduce operational costs.
- Lead the design and development of customised Oracle Cloud ERP solutions that are scalable, secure, and user-centric.
- Develop detailed system architecture plans that incorporate best practices for data security and system resilience.
- Customise ERP system configurations to meet diverse business requirements and support various operational needs.
- Strategize and manage the migration of critical business data from legacy systems to Oracle Cloud ERP, minimising operational downtime.
- Implement data validation and cleansing practices to ensure data integrity within the ERP.
- Develop and execute integration strategies for Oracle ERP Cloud with external systems to enhance operational efficiency.
- Provide training and develop documentation to support effective system use and maintenance.

#### Project Achievements

- ✓ Taken over a complex project implementation in the middle and completed with good quality deliverables, in less time with utmost ownership and exercised excellent leadership skills and obtained several accolades from the client and other involved project teams and business stakeholders.

**ZENICS Consulting and Services PTE Ltd | Singapore**

**13 Sep 16 – 30 Jun 23**

A company founded, focusing on specialty IT Consulting Services.

| <b>Applications Covered</b> | Oracle Project Management Cloud (Project Financial Management: Grants Management, Foundation, Costing, Control, Billing, and Enterprise Contracts for Billing, Project Execution Management: Resource Management, Task Management, Reports (OTBI (Dashboards, BI composer, BI answers, analytics, Smart View)), PDSC (Project Driven Supply Chain applications), Project Manufacturing (PJM), Oracle Time and Labor, Project Portfolio analysis, Project Contracts, Grants management, Projects Accounting (PA), and Contracts Management, Oracle Inventory Management Cloud, Oracle Procurement Cloud, Self Service Purchasing, Purchasing, Sourcing, i-Supplier Portal, Supplier Qualifications Management-SQM, Supplier Lifecycle Management, Procurement Contracts, i-Expenses, Procurement, Inventory, Cost Management, Workflows, Visual Builder, Application composer, ADFDI, FBDI, along with expertise in integrations with Oracle Apex, Coupa, ServiceNow, Workday, Power BI, Hyperion, SHIFT (in-house reporting app), Good App maker, Smartsheet, and other third-party and in-house apps, PeopleSoft, including Gideons (AR System) and Helios (Time entry system), as well as data model integrations from Oracle to BI, BPM worklist customizations etc., |

**Project Description:** As a member of Air Liquide's Financial team, actively contributed to the successful implementation, support and enhancements of key financial processes within the BIS APAC team. This team oversees and maintains critical IT systems for managing P2P, O2C, and reporting requirements across the APAC organisation, driven by various project initiatives (some products even from scratch) undertaken by Air Liquide.

- Lead design, implementation, upgrades, and support for Oracle Apps within the APAC IT team.
- Specialised in Oracle EBS, Cloud's PPM with Project Driven-Supply Chain (PDSC) and Grants Mgmt., ensuring seamless integrations and successful multi-location rollouts, enhancing project and financial management efficiency.
- Integrating Oracle with several third party applications such as Coupa, Workday, Platinum, Helios(time and entry), Oracle Apex, Maximo, Service Now, PowerBI, and several other business applications built in-house and other tools built in Middleware UI.
- Plan and facilitate requirements analysis, process mapping, and gap fitment, followed by code development, testing, and deployment.
- Mastery in PDSC projects spanning from project creation, sales order processing, component procurement, manufacturing, to shipping logistics, with specialised experience in asset incentive programs for PDSC in diverse industries.
- Proficient in orchestrating all stages of PDSC initiatives, ensuring seamless execution and optimal outcomes, incl. the implementation of asset incentive programs for PDSC.
- Played the role of Product owner for several in-house built tools to manage end to end implementations and own their roadmaps, future enhancements etc.,
- Played the role as Scrum master for a few projects while offering expert advice and resolving project specific execution issues.
- Manage end-to-end upgrades, covering functional testing, impact analysis, code remediation, cutover, and deployment.
- Lead data conversion and migration from Legacy systems to Oracle EBS and Cloud, manage FBDI templates, and develop migration strategies with efficient process and maintenance.
- Identify gaps b/n current and desired processes, drafting and reviewing them with stakeholders.
- Analyse clients' requirements, assess scope of studies, and handle customization as needed.
- Implement functional solutions, considering product depth and relevance to client processes.
- Facilitate design and solution workshops, present Proof of Concept (POC), and arrange Conference Room Pilot (CRP) sessions.
- Build and update document deliverables, including BR100, MD050, TE040, etc.
- Create a business environment, prepare test cases for validation, and drive/support UAT.
- Troubleshoot system issues within given timelines and SLAs.
- Conduct end-user training, prepare training manuals and SLAs.
- Own and maintain continuously on product functionality, new features, and related modules.
- Absorb and assimilate diverse domain parameters and relate them to the solution on hand.
- Configure, validate, and support APEX Reports, playing varied key roles for multiple projects.
- Overall project and demand management with end-to-end ownership, including team management and work allocation.

| Project Achievements |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>Project Name</b>    | <b>Oracle Implementation and Support</b>                                                                                                                                                                                                                                                                |
| <b>Client</b>          | BOC Aviation Pte. Ltd - Asia's top aircraft operating lessor, ranked fourth globally by Owned Fleet.                                                                                                                                                                                                    |
| <b>Project Role</b>    | Oracle Apps Senior Lead Functional Consultant and <b>lead two projects as PM</b>                                                                                                                                                                                                                        |
| <b>Environment</b>     | Oracle Cloud PPM, Financials, Procurement                                                                                                                                                                                                                                                               |
| <b>Modules Covered</b> | Oracle PPM (Costing, Billing, Resource Mgmt, Grants Management) and Financials (GL including concepts like Budgetary Control and Encumbrance Accounting), Project Driven Supply Chain (PDSC) suite of applications, IEXP, iProcurement, SLM), SCM(Inventory, Cost Management) and Oracle Time and Labor |

**Description:** BOC Aviation aimed to implement Oracle Apps Project Accounting and Financials for efficient management of approved cost budgets, tracking actual costs, and projecting future committed expenditures by MSN. This includes key fleet services like transition, repossession, inspection, etc., issuing customer billings for services on BOC Aviation Owned/Managed fleets to global customers.

**Contribution:**

- Led the project as a project lead for the implementation of project costing, billing and financial applications at BOC Aviation, taking on widespread ownership.
- Conducted various project meetings, including kick-off meetings and regular progress meetings, throughout distinct project phases such as initiation, requirement study, design, build, and UAT, with the project's main steering committee.
- Gained a deep understanding of client business processes, services, and industry-specific knowledge through discussions with key business users. Prepared requirement scopes and documented as-is and to-be solution designs.
- Set up the application, provided recommendations, workarounds, and necessary customizations based on client business requirements. Formulated functional custom RICE components and other customization design documents.
- Coordinated with significant technical teams to ensure the successful implementation of the expected solution and fulfilment of agreed customization requirements.
- Collaborated with the Oracle support team to address standard application-related issues, executing action plans and patching activities throughout the project life cycle.
- Conducted comprehensive solution design explanations, including demos, obtaining feedback, and securing sign-offs from users.
- Led CRP and UAT sessions, actively resolving issues encountered during solution validations.
- Developed standard and custom solution test scripts, test data, and distinct test scenarios categorised by each business process, validated by respective business process owners.
- Organised training for business lead users, providing self-explanatory manuals by process.
- Prepared and executed the go-live plan, ensuring timely implementation through collaboration with cross-functional and technical teams.
- Provided post go-live support and issue resolution through the service desk tool, coordinating with other teams and business users.
- Composed application setup documents, explaining how to maintain the application in case of further enhancements in setups, etc.

| <b>Project Achievements</b>                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------|
| ✓ Swiftly grasped BOC Aviation's business processes and aviation industry knowledge, delivering high-quality project results on schedule. |
| ✓ Designed and implemented a streamlined Aircraft# creation, cost control, and billing management solution for BOC Aviation.              |

|                        |                                                                                                                                                 |

| <b>Client</b>          | Kulicke & Soffa Pte. Ltd - A global leader in the design and manufacture of semiconductor assembly equipment.                                   |
| <b>Project Role</b>    | Business Process Consultant – Oracle Functional                                                                                                 |
| <b>Environment</b>     | Oracle Apps ERP PPM, Procurement EBS and Cloud                                                                                                  |
| <b>Modules Covered</b> | Oracle Projects Suite, Purchasing, AP, AR, GL, Internet Expenses, Fixed Assets, Oracle Time & Labor, Project Manufacturing, Inventory, Web ADI. |

**Description:** In 2013, Kulicke & Soffa upgraded to Oracle R12 without the projects module. Subsequently, they aimed to directly implement Oracle Project modules in R12 to address challenges in assembling next-generation semiconductor devices. This integration focused on tracking costs against project appropriation requests for global engineering and cost of poor quality business lines.

**Contribution:**

- Led projects as the implementation consultant, focusing on project costing, project management, Financials and integrating with other applications.
- Managed multiple projects concurrently, ensuring prompt and accurate delivery of solutions.
- Conducted as-is, t-be studies, proposing effective solutions after understanding client processes.
- Collaborated with cross-functional teams, including business process owners and technical teams, to achieve optimal solutions for stakeholders.
- Set up applications based on AS IS studies, addressing gaps through workarounds and customizations, and prepared functional designs.
- Owned RICE components (Reports, Interfaces, Conversions, Extensions) and customizations.
- Conducted training sessions, including Train the Trainers with identified business lead users, using user-friendly materials and test scenarios.
- Prepared extensions (MD050) and guided technical team in developing new RICE components.
- Developed, executed test scripts (TE040) thoroughly by capturing tested data for training, CRPs, and UAT.
- Validated RICE components comprehensively to ensure accuracy in all scenarios.
- Conducted regular follow-up meetings with business stakeholders and the core SME team.
- Prepared setup documents, distinct flow test cases, and conducted thorough tests to ensure smooth business flows before UAT and go-live.
- Provided post go-live support and issue resolution using the internal ticketing tool.
- Collaborated with Oracle support to resolve standard application issues and validated solutions.
- Established and maintained a knowledge repository, and continuously reviewing and updating it.

| <b>Project Achievements</b> |                                                                                                                                                                                             |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ✓                           | Achieved successful go-live phases I and II, satisfying the client and significantly enhancing current business processes through project module implementations in a shortened time frame. |
| ✓                           | Recognized as the key PIC for projects-related issues by business lead users across multiple sites.                                                                                         |
| ✓                           | Streamlined the 'Capex approvals & Cost of poor quality tracking' process for Kulicke & Soffa, simplifying and enhancing efficiency in these critical areas.                                |

|                     |                                                                          |

**Description:** Thales relies on Sopra Group for comprehensive Oracle ERP solutions, supporting seamless operations across defence, security, space, aerospace, and transportation sectors.

**Contribution:**

- Served as an Oracle Projects and Financials Functional Consultant within the design/build team.
- Conducted POC studies, offering recommendations aligned with client business processes.
- Managed detailed functional specifications (DFS) & test scripts (TSR) for business requirements.
- Facilitated regular client meetings to gather requirements, utilising innovative questionnaires.
- Prepared extensions (MD050) and guided the technical team in developing new Components.
- Accountable for successful task assignment to teammates, ensuring completion and review.
- Set up apps based on AS IS studies, addressing gaps through workarounds and customizations.
- Performed and reviewed test results, progressing in a global delivery model.
- Executed end-to-end test scenarios, troubleshooting and analysing root causes for encountered issues, preparing the application for UAT.
- Conducted testing, verification and regression testing, documenting and troubleshooting issues.
- Thoroughly validated RICE components, drafting setup change notices (SCN) in all scenarios.
- Managed Oracle Service Requests (SR) with Oracle support until issue resolution.
- Prepared user-friendly content for the User Knowledge Portal (UKP) for easy understanding.
- Implemented Train-the-Trainer approach for business user training and provided proactive post-implementation and go-live support.

| <b>Project Achievements</b> |                                                                                                                                                              |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ✓                           | Applauded for quickly mastering MSC domain knowledge, assuming full responsibility for weekly deliveries, and delivering Release 12 JIRAs with high quality. |
| ✓                           | Nominated as PIC for MSC team, to share the knowledge across teams and guiding each other.                                                                   |
| ✓                           | Taken the ownership of the team with initiation & led an upgrade project for Thales Group.                                                                   |

**DXC Technology (formerly CSC India) | Hyderabad, Noida, India      14 May 2007 – 02 Sep 2010**

A global leader in providing technology enabled business solutions and services.
