PROFESSIONAL SUMMARY

- 11+ Years of experience in Identity Access Management which includes proven work experience in design, development, testing, implementing enterprise-wide security applications using CA Identity Minder, CA SiteMinder and Sun One LDAP Directory.
- To improve the client's security posture and usability, SailPoint Identity Now Implementation developed and executed Identity and Access Management solutions.
- Experienced working with networks, LDAP/UNIX groups, Active Directory, and identity and access management systems for human resources.
- I am a professional with experience in Identity Access Management who has implemented the Access Review and Provisioning Solution Performed Integration with multiple applications such as AD, Exchange, RDBMS, Flat File & LDAP. Upgraded SailPoint from 5.5 to 6.X.
- Experience in OAM (Oracle Access Management), SSO, ForgeRock OpenAM and OpenDJ. Involved in various SiteMinder upgrades including Okta, SiteMinder 6.0 to R12 and SiteMinder 12 to 12.52. Experience in Governance Minder, using 12.5.7 and installed, configuring and troubleshooting.
- Exporting Metadata, creating Adapters, Service Provider connections, Identity Provider connections, replicating configuration archive, importing and exporting SSL certificates using Okta and SiteMinder.
- Implemented ForgeRock Open DJ for LDAP data store for internal user data. Implemented data sync between Active Directory and LDAP using ForgeRock.
- Have Experience in using IdP initiated, and SP initiated SAML profiles with different binding methods like POST, Artifact, redirect to deliver a custom SSO environment as per the requirement.
- Provided Sail Point-related troubleshooting services as part of project or post-production support activities.
- Experience with design and implementation of enterprise identity and access management solutions.
- Hands on experience in integrating SAML, SWA based applications in Okta.
- Key roles played in various Release and Migration activities.
- Hands on experience SSO application on boarding, installation, implementation, configuration, deployment and troubleshooting on SSO product.
- Played a key role in Deployment activities during Installation, up-gradation and Patching on a weekly/Monthly and Yearly basis.
- Experience on IAM products from ForgeRock (Open IDM, Open AM and Open DJ) and building IAM solutions implementing OAuth2 and ODIC specification.
- Having experience in deploying Ping Docker images in a Containerized environment on cloud which can then be scaled in a repeatable manner. Knowledge of the Ping platform - ping federate, ping directory etc.
- Integrated feature flags application within SailPoint's SaaS product IdentityNow. The app selectively enables and disables features at a fine grain as well as enabling features for a percentage of users for operational.
- Gather requirements by conducting meetings and brainstorming sessions with SMEs and senior management.
- Involved in conducting JAD (Joint Application Development) sessions with the entire team to come up with the workable solutions for the business problems.
- All designs & implementations included automated provisioning via Tivoli Identity Manager using adapters and developing custom Tivoli Directory Integrator (TDI) to multiple endpoints including Active Directory (AD), Python, LDAP, Tivoli Access Manager, and databases.
- Experience working on SailPoint IdentityIQ and Saviynt Security Manager v4.4 worked on various kinds of connectors like Delimited File, JDBC, LDAP, AD, Oracle Application Direct.
- Experience in SailPoint tool customization, Report Generation, Integration with end/target systems, SailPoint API's and Application Development. Worked on SailPoint IIQ Designer & Analyzer tools.
- Experience in Identity and Access Management products like SailPoint IIQ. Installed SailPoint IIQ Identity Manager and Access Manager software.
- Experience in internal and external applications (SAML, Oauth, OIDC, SSO, Ping, PowerShell, Python, Agile, Kerberos etc.). Develop build map rule, customization rule, and exclusion rule using Java Coding, Beanshell and Linux/Unix.
- Experience in implementing an upgrade of SailPoint IIQ from 7.2x to 8.0 including connector gateways and password interceptor agents. Developed custom workflow for provisioning LCM workflow for dynamic approvers and multiple levels.

- Having experience in Incident Management and working on primary support for mortgage clients, managing incident bridges (P1 - P4) to provide resolution with support teams for all business units.
- Generate / retrieve logs and compiled reports via Splunk and synchronized them into ServiceNow.
- Involved in process improvement calls/meetings – set up new process frameworks, recommending, editing and updating documents for senior management review.

TECHNICAL SKILLS

IDM/IAM Solutions	SailPoint Identity IQ 8.0, 7.1, 7.4 and 7.0, Sun Identity Manager, Sun Access Manager, Sun Open SSO, Saviynt, Okta, Azure, Site Minder, ForgeRock Open AM, ForgeRock Open IDM, ForgeRock Open DJ
LDAP DIRECTORIES:	CA Directory 8 /12, Microsoft Active Directory, PowerShell, Sun One Directory Server, and Oracle Virtual Directory (OVD).
Middleware	Webserver (IIS 5.0/6.0, Apache 2.0/2.2, IBM HTTP Server 6.0/6.1/7.0, IHS),
Directory Servers	MS AD
Languages	Java, Java script, PL/SQL, Unix Shell Scripting, XML, Python, SOAP, HTML, CSS
Identity Management Tools	CA SiteMinder, CA SiteMinder Web Agent with Option Packs, SAML, Ping Federate, Ping Access, Ping One MFA, Azure MFA, ADFS, Azure AD, ForgeRock AM, ForgeRock IDM, ForgeRock IG, ForgeRock DS
Packages	MS-Office (Word, PowerPoint, Excel, OneNote).
Application Servers	WebLogic, WebSphere, Apache Tomcat, Service Now ITSM, JBoss, SSM, Oracle Application Server (OAS, OC4J)
Operating Systems	Microsoft Windows up to Windows 2008 R2 Enterprise Edition, ISO 27002, UNIX (SOLARIS 2.x, SOLARIS, AIX, IRIX, HP/UX, LINUX)

PROFESSIONAL SUMMARY

Teladoc Health, Chicago, IL

Aug 2022 – PRESENT

Sr. IAM Engineer/ ForgeRock IAM Engineer

Responsibilities:

- Configured AD pass-through authentication for Identity Access Manager (IAM).
- Configured and supported SAML 2.0 with various partners to create SSO/FEDERATION between our Identity Provider Landing page and Service Provider's Applications.
- Installed and configured the IAM suite components in production environments.
- Coordinating with testing team to perform load and regression tests on applications in different environments.
- Configured Authorization code and Resource Owner Grant in OAuth 2.0.
- Generated ID tokens in Authorization code flow which is used for authentication by application teams.
- Worked with testing teams to Imported user accounts from production environment to staging environment to confirm different test cases.
- Hands on experience with IAM products (Aveksa, Sailpoint, Oracle IDM, IBM identity manager, ForgeRock, Ping identity, Courion, CA Identity)- Design and engineering experience, handling updates & patches
- Experience in architecting, designing and developing, Identity and Access Management tool and Break/Fixing - Saviynt Security Manager v4.4, in Configuring Connectors, Role Management, Life Cycle Manager Provisioning and Access Certifications, Report generation, Integration with end/target systems and SailPoint Identity IQ APIs, Agile, Python, REST APIs, Custom Connector, Patch up gradation.
- I am working as an IAM Engineer as part of the Cybersecurity engineering team to support and administer ForgeRock OpenAM/OpenDJ or Oracle LDAP/SiteMinder infrastructure of various applications.
- Involved in implementing teh B2B portal, which includes building teh SiteMinder/ ForgeRock or Oracle LDAP/ForgeRock OpenAM servers and Reverse proxy servers for SiteMinder or ForgeRock web agents.
- Involved in implementing various SAML SSO setup where SiteMinder acting as Service Provider or Identity Provider and external vendors acting as Identity Provider or service provider using SAML 2.0 in IDP/SP started method.
- Involved in Design and building ForgeRock OpenAM & OpenDJ environments from scratch as part of migration from SiteMinder infrastructure for B2B & B2E portals.

- Involved in planning and implementing migration from SiteMinder to ForgeRock OpenAM environment for various portals.
- Worked with various application teams to migrate from SiteMinder Web Agent to ForgeRock Web Agent for various portals successfully.
- Set up ForgeRock J2EE Agents on various application servers like Tomcat/IIS.
- Worked on various ForgeRock Web agents upgrades from 4.x to 4.2 & 5.x as well and resolved any issues.
- Collaborated with various vendors or banks or application team to implement SSO using SAML or OIDC where ForgeRock can function as IDP or SP & authorization servers.
- Worked on design, building and migrate environment from Oracle ODSEE LDAP to ForgeRock OpenDJ where OpenDJ will function as authentication provider for almost 60k+ Linux clients.
- Involved in upgrading and building a new environment globally across 4 data centers with ForgeRock OpenAM 6.x along with deploying authentication modules & trees and migrated almost 300+ applications to the new platform without any issues.
- Worked on upgrading ForgeRock OpenAM versions from AM 13.5 to 6.x and agents from 4.x to 5.x.
- Hands on experience with IAM products (Aveksa, Sailpoint, Oracle IDM, IBM identity manager, ForgeRock, Ping identity, Courion, CA Identity)- Design and engineering experience, handling updates & patches
- Supporting Cloud Applications such as Office 365, Google Apps, Salesforce, Workday, NetSuite, Box, etc.
- Experience of AWS as a hosting platform
- Planned and executed vendor selection & analysis for Roles project (Sailpoint, Oracle Identity Governance, Courion & ForgeRock) and for Multifactor Authentication project (Safenet, SecureAuth, Duo Security) for around 20,000+ internal users within 10 weeks with detailed design and implementation analysis' use case Experience with the ForgeRock suite of IAM products
- Exceptional analytical and problem-solving abilities with keen mindfulness.
- Worked collaboratively with cross-functional teams, including developers, system administrators, and security professionals, to deliver comprehensive IAM solutions.
- Designed and developed complex user journeys for customer identity and access management (CIAM) using ForgeRock components like Access Management (AM) and Identity Management (IDM).
- Implemented adaptive and intelligent authentication mechanisms, such as multi-factor authentication (MFA), passwordless login, social login, and risk-based authentication, to enhance user experience and security.
- Customized and configured ForgeRock Identity Gateway (IG) and AM components to create seamless and secure user access flows that align with business requirements and customer needs.
- Leveraged scripting (JavaScript, Groovy) and custom development in Java to extend the functionalities of user journeys and integrate them with third-party applications and services.
- Implemented Single Sign-On (SSO) and federated identity management solutions using OAuth 2.0 and SAML 2.0 protocols in ForgeRock environments.
- Configured and integrated ForgeRock with external identity providers (IdPs) and service providers (SPs) to enable secure access for users across various applications and services.
- Developed custom authorization policies and scopes for OAuth 2.0 integrations to support fine-grained access control and secure API access.
- Troubleshooted and resolved integration issues related to OAuth 2.0 and SAML, including token handling, claims mapping, and assertion handling.
- Deployed and managing ForgeRock CIAM solutions on AWS cloud infrastructure, including setting up environments using EC2, S3, RDS, Lambda, and other AWS services.
- Implemented cloud-native security best practices, such as identity federation, IAM roles, and security groups, to secure ForgeRock deployments on AWS.
- Leveraged AWS services like API Gateway, Cognito, and Secrets Manager to enhance identity management, secure APIs, and store secrets securely within the ForgeRock ecosystem.
- Optimized cloud resources and configurations to ensure high availability, scalability, and performance of ForgeRock CIAM solutions.
- Developed custom authentication modules, scripts, and plugins using Java, JavaScript, and Groovy to extend the capabilities of ForgeRock components (AM, IDM, IG, DS).

- Created custom nodes, decision trees, and authentication chains to implement complex business logic and user journeys in ForgeRock Access Management (AM).
- Wrote Groovy scripts and Java code to automate workflows, perform data transformations, and customize identity management operations in ForgeRock IDM.

Environment: SAML 2.0, SailPoint Identity IQ 7.0, OAuth2.0, E-directory, Sun One Directory Server, Ping Access, Apache 2.x, Webserver 6.1, Tomcat 4/5, AD, LDAP, VB.NET, AD, ADFS, Powershell, Ping Federate, Ping Access, Siteminder, OAuth2, OpenID Connect (OIDC), JIRA, JavaScript, Angular JS, LDAP, Python, Ansible, AWS, python, Terraform, CloudFormation.

KeyBank| Chicago, IL

Sep 2019 – July 2022

IAM Consultant

Responsibilities:

- Experience in Identity & Access Management Solution including Single Sign On.
- Experience in administrating OKTA and providing support to OKTA clients.
- Experience in integration with OKTA
- Worked on Multifactor Authentication Using OKTA
- Integrated Workday using OKTA SSO.
- The framework for New Hire Onboarding and Off Boarding Process via Workday as a Master using Okta.
- Design secure solution for moving program data from premise locations and applications to Office 365 for dashboards and business intelligence.
- Create, DR runbooks, SOP runbooks, workflows, and applications, lists as needed.
- Design and Implementation experience - Including participating in the Get-Well cleanup of OKTA and user provisioning.
- Designing the framework for New Hire Onboarding and Off Boarding Process via Workday as a Master using Okta
- Streamlined and Automated the New Hire Onboarding and Off Boarding Process via Workday/Okta/AD, it was popularly known as 'One Click On-Boarding/Off-Boarding'. This framework also includes Provisioning/Deprovisioning of SaaS base applications.
- Streamlined and Automated the New Hire Onboarding and Off Boarding Process via Okta/AD, it was popularly known as 'One Click On-Boarding/Off-Boarding'. This framework also included Provisioning/Deprovisioning of SaaS base applications.
- Experienced in administration OKTA and providing support to OKTA.
- Experienced in multiple integrations with OKTA.
- Experience in integrating OKTA with Active Directory.
- Experience with OKTA API's, Setting up. OKTA API tokens.
- Led the implementation of SCIM (System for Cross-domain Identity Management) provision to automate user lifecycle management in Okta.
- Configured SCIM connectors to integrate Okta with various applications and systems, ensuring seamless user provisioning and deprovisioning.
- Customized SCIM configurations to meet specific organizational requirements and workflows.
- Managed the provisioning and deprovisioning of user accounts across multiple applications using SCIM protocols.
- Ensured right and prompt synchronization of user data between Okta and connected applications.
- Developed and supported automation scripts to streamline the provisioning processes.
- Integrated Okta with various SCIM-enabled applications, such as HR systems, cloud applications, and on-premises systems.
- Collaborated with application owners and vendors to set up and test SCIM connectivity.
- Troubleshoot and resolved integration issues, ensuring reliable and consistent data flow.
- Monitored SCIM provisioning processes to ensure compliance with security and regulatory requirements.
- Conducted regular audits and reviews of provisioning activities to find and address discrepancies.
- Generated reports and analytics on provisioning activities to provide insights into management and stakeholders.
- Actively involved in the SEP patching process and Implementation plan for all servers.
- Experience with OKTA, ADFS and certificate and domain management
- Managed day-to-day activities creating and managing OKTA policies and creating and managing OKTA applications, including SAML and SWA applications.

- Integrated ForgeRock IG as a proxy server which intercepts all the requests that come to the application and sends it back to the ForgeRock OpenAM for authentication, which acts as a policy decision point to allow the requested resource.
- Installed ForgeRock Amster tool which is used for importing and exporting configuration from one AM instance to another AM instance.
- Worked on building ForgeRock OpenIDM environment by setting up standalone OpenIDM along with IDM store.
- Worked on building and configuring servers with replication across multiple data centers globally for Checkout environment using CA Directory using synchronous & asynchronous methods.
- Configured various LDAP connectors to SyncUP data between various LDAP servers as part of migration from Oracle ODSEE to ForgeRock OpenDJ LDAP environment.
- Worked with CA/Oracle/ForgeRock/Broadcom vendors to troubleshoot the various issues as part of integrating applications with B2B Portal
- Experienced in the design and implementation of sign-on solution based on SAML and ODBC.
- Minor development experience on Python in PyCharm also with Workato.
- Senior understanding of Active Directory, Azure Active Directory and ADFS
- Installed and configured CyberArk components such as the Vault, Password Vault Web Access (PVWA), Central Policy Manager (CPM), and Privileged Session Manager (PSM).
- Architected CyberArk solutions for high availability, disaster recovery, and scalability.
- Designed and implemented enterprise-wide privileged account management (PAM) strategies.
- Developed policies and procedures for privileged access control, account provisioning, and deprovisioning.
- Integrated CyberArk with a wide range of enterprise systems (e.g., SIEM, ITSM, identity governance).
- Automated repetitive tasks using advanced scripting (PowerShell, Python, APIs) to enhance efficiency.
- Implemented advanced security measures such as multi-factor authentication (MFA), just-in-time (JIT) access, and zero trust principles.
- Worked on developing governance frameworks and metrics for continuous improvement of PAM practices.
- Kept deep ability in CyberArk architecture, including advanced configurations and customizations.
- Proficient in scripting languages (PowerShell, Python) and CyberArk's REST APIs for automation and integration.
- Experience in developing long-term PAM strategies and roadmaps.
- In-depth knowledge of security best practices, threat landscape, and mitigation techniques.
- Strong understanding of encryption, authentication, and access control mechanisms.
- Had experience in managing large-scale CyberArk deployments and upgrades.
- Proficient in project management methodologies (Agile, Waterfall) and tools.
- Coordinated with cybersecurity teams to respond to and mitigate security incidents involving privileged accounts.
- Utilized CyberArk's advanced monitoring and alerting capabilities to detect and prevent threats.
- Integrated CyberArk with cloud services (AWS, Azure), DevOps tools (Jenkins, Ansible), and other IAM solutions.
- Worked on Implementing advanced security features like secure API gateways and service account management.
- Developed and implemented authentication solutions using protocols such as Security Assertion Markup Language (SAML), OpenID Connect (OIDC), OAuth 2.0, and Multi-Factor Authentication (MFA).
- Designed and configured risk-based authentication mechanisms to enhance security posture and adapt to dynamic threat landscapes.
- Integrated authentication protocols with various enterprise applications and cloud services to ensure seamless and secure user access.

Environment: Okta, Workday, Office 365, SAML 2.0, OpenID Connect (OIDC), OAuth 2.0, MFA, Risk-Based Authentication AD, Azure AD, ADFS, Pycharm, CyberArk, AWS, Azure, Powershell, AWS IAM, AWS Identity Center, AWS Organizations, AWS Single Sign-On (SSO), Python, Java, JavaScript, PowerShell, Bash, GDPR, HIPAA, SOX, Saviynt IGA.

AVEVA, India

Feb 2017 – Aug 2019

IAM Engineer

Responsibilities:

- Manage, keeps, supports troubleshoots, and optimizes the Azure AD environment, and suggests adjustments and new system designs for future needs.
- Configuration, integration, and management of Azure AD Identities, Groups, App Registrations, and SSO services.

- Perform assessments on various environments and provide recommendations for system improvements, and optimization.
- Accept escalations and complete service requests within the established SLAs and provide best practice recommendations!
- Resolve level 2 and 3 problems and issues related to Azure AD.
- In-depth understanding of Azure AD Identities, Security Groups, Azure AD Roles.
- Development and upkeep of documentation relating to the client's Azure Active Directory environments.
- In-depth understanding of Azure AD Identities, Security Groups, Azure AD Roles.
- Experience with Azure App registrations, SAML SSO, Azure Active Directory Connect, and Azure Portal Administration.
- Knowledge of Office 365 Management Suite and PowerShell.
- Strong fluency user of Windows applications and Microsoft Office programs such as MS Project, Word, Excel, and PowerPoint.
- Experience with Azure Active Directory, Azure Managed Service Identity
- Design, implement and manage virtual networking within Azure and connect to on-premises environments, configure Express Route, Virtual Network, VPN Gateways, DNS, and Load Balancers

Environment: CA IDM 12.x, JDK 1.4/1.5, J2EE, SailPoint IIQ, Radiant Logic, JDBC, XML, MFA, SAML 2.0, Oauth 2.0, Beyond Trust, Azure, identity governance, Active Directory, PAM, Site Minder, Okta SSO 3.4.x SAML 2.

Virtusa, Hyderabad, India

May 2014– Jan 2017

Identity access management

Responsibilities:

- Utilized IAM protocols such as SAML, Oauth, Open ID.
- Designed and implemented identity lifecycle management enhancements.
- Provided continuous monitoring and operational support for secure access management.
- Led comprehensive incident response and forensics evaluations using SIEM tools.
- Worked on the password synchronization between IDM and AD using password.dll and registry key.
- Implemented and configured SailPoint IdentityIQ/IdentityNow to streamline identity governance and access management processes.
- Provided the Identity and Access management components/environment transition to Diversey.
- Developed custom reports and dashboards in SailPoint to provide insights into user access patterns and compliance status.
- Ability to determine how a security system works (including its resilience and dependability capabilities) and how changes in conditions, operations, or the environment will affect these outcomes.
- Involved in doing POC on implementing OAUTH 2.0 integrations using Ping Fed as part of migrating from SiteMinder to Ping Fed.
- Good understanding of Jumio tool.
- Improved incident detection, response, and reporting processes.
- Developed and supported IAM solutions to globally dispersed businesses and customers.
- Demonstrated expertise in IAM integration with cloud-based identity providers for seamless and secure authentication.
- Evaluated systems and applications to identify security vulnerabilities and recommend improvements.
- Ensured that security protocols and standards, such as OAuth 2.0 and SAML, were followed to meet compliance requirements.
- Developed and enforced security policies, including encryption, access controls, and data protection.

Environment: Access Management, Ping, Active Directory, OIDC, Okta, ABAC, SiteMinder, LDAP, OAuth, RBAC, Secure AUTH, OpenID, Azure AD, ADFS, MDM
