Dallas, Texas

EXPERIENCE

Senior Software Engineer

Walmart

10/2020 - Present Dallas, Texas (USA)

- Involved in various aspects of software development lifecycle, primarily focusing on development activities with occasional support which involved deployment activities to production environments, upgrading java versions and code migration.
- Developed and deployed **Spring Boot microservices** on AWS ECS(Fargate), improving scalability and cost efficiency.
- Led the development and subsequent upgrade of the transaction processing engine for a major e-commerce platform, initially developed using **Java 7** and later upgraded to **Java 8**.
- Initially implemented features such as try-with-resources and multi-catch blocks from Java 7 for better resource management and error handling.
- Post-upgrade, leveraged Java 8's **lambda** expressions and **Stream API** for data processing tasks to enhance performance and readability. Also utilized the new Date and Time API for more accurate time-stamping of transactions.
- Designed, implemented, and optimized Oracle databases to enhance system performance and reliability.
- Integrated Oracle databases with Java-based microservices using Spring Boot and developed PL/SQL stored procedures, triggers, and functions for business logic processing.
- Implemented serverless event-driven processing using **AWS Lamda** and SNS/SQS for asynchronous task execution.
- Collaborated closely with Walmart stakeholders to analyze and document both functional and non-functional requirements for creating detailed Swagger for API development activities.
- Designed and implemented a Kafka-based event-driven architecture to process high-volume transaction, optimized **kafka** consumer groups for efficient load balancing and managed Kafka brokers and **RabbitMQ** clusters using Prometheus and Grafana.
- Provided 24/7 on-call support working in shifts for critical production system during hotsale period, ensuring 99.9% uptime by quickly identifying and resolving incidents.
- Monitored system performance using **AWS CloudWatch** and **Splunk**, proactively detecting issues before they impact users.
- Worked on a tracking page widget to provide customers with real-time order status and shipment updates by interacting with OMS using ReactJS.
- Designed and developed **REST APIs** using Java and SpringBoot frameworks, ensuring robust functionality and system interoperability.
- Participated in quality assurance processes, conducting thorough code reviews and writing JUnit test cases to maintain high standards of code integrity and reliability
- Maintained and enhanced application post-implementation, ensuring optimal performance and high user satisfaction through regular updates and fixes.

SUMMARY

Driven by a passion for technology and a commitment to enhancing user experiences, a strong background in **Java** development, **REST API** creation, and collaborative problem solving is offered and deploying microservices on **AWS Cloud**. Proficiency in software lifecycle management and a focus on improving system reliability are highlighted, aligning well with the objectives of fostering impactful solutions. Enthusiastic about contributing to initiatives that leverage cutting-edge technologies to meet user needs effectively. Extensive experience in version control(**Git, SVN**) and message-driven architecture(**Apache Kafka, IBM MQ**).

SKILLS

Programming Languages

Java 8, SQL, XML, JSON, ReactJS, AngularJS

Database Technologies

Oracle, MySQL, Cassandra, NoSQL

Frameworks

Spring Boot, Hibernate, JPA, Apache Kafka, RabbitMQ

Project Management Tools

Jenkins, JIRA, GIT, Bitbucket, Salesforce, Lightspeed, Harness

Web Services

RESTful APIs, SOAP

Cloud Technologies

Kubernetes, Red Hat OpenShift, Virtual Servers, MS Azure cloud, IBM Cloud, AWS

Incident Management

PagerDuty, ServiceNow, Jira, AWS Cloudwatch, Splunk

Object relational mapping tools

Hibernate, JPA

Microservices

Docker, Kubernetes, Service Discovery (Eureka/Consul), API Gateway (Zuul)

KEY ACHIEVEMENTS

Reduced Application Downtime

Improved system reliability by 20%.

Developed Custom Solution

Increased customer satisfaction by 30%.

Enhanced System Efficiency

Reduced issue resolution time by 50%.

EXPERIENCE

Senior Software Consultant

Bridge Solutions Group

📅 04/2019 - 10/2020 📍 Bengaluru, India

- Collaborated with cross-functional teams to identify root causes of application errors, resulting in a 20% decrease in downtime and an overall improvement in reliability.
- Engineered RESTful APIs using Java8 and SpringBoot and integrated MySQL databases with advanced transaction management capabilities.
- Wrote high-quality, well-structured code and also maintained high-test coverage during code review and deployment.
- Developed and maintained data models and ER diagrams for high-volume applications.
- Managed Oracle database upgrades, patches, and performance tuning.
- Performed troubleshooting, debugging, testing activities on various methods and code for innovative resolution, high-test coverage and documented for the support team use
- Assisted team members in design discussions and decisions making for estimating effort for current and future projects
- Utilized **Java** and front-end technologies to design, develop, test and deploy various large-scaled, distributed server-side applications
- Developed and executed project plans for the creation of a custom RESTful solution using **Spring** to meet WM clients' needs, resulting in a 30% increase in customer satisfaction
- Generated detailed reports on system issues, enabling the team to prioritize critical problems and resolve them efficiently, reducing average issue resolution time by 50%
- Involved in full software development life cycle, code migration and upgrading products and maintained **CI/CD pipelines** for code deployment using Jenkins
- Managed **GitHub** repositories and permissions, including branching and tagging.

Software Engineer

CEBS Worldwide

📅 01/2017 - 04/2019 📍 Noida, India

- Developed a statistical data preparation service for machine learning.
- Oversee the architecture and development of healthcare management systems using **Java** technologies and **Spring Boot**.
- Focus on secure data handling and high availability systems with **PostgreSQL** for storage and transaction management.
- Developed and tuned complex SQL queries to optimize report generation and analytics.
- Designed and implemented database partitioning and indexing strategies for performance improvements.
- Automated database maintenance tasks using shell scripting and scheduled jobs.
- Implement advanced features of Java 8 and migrate legacy code from Java 7 to Java 8, focusing on streamlining and modernization.
- Configured Supplier - Consumer flow based on **Kafka** to gather data from the different sources.
- Implemented the serialization/deserialization process using the Jackson library.
- Significantly improved system architecture through the integration of concurrent data processing, leading to an impressive 300% reduction in processing time.
- Designed and developed a simulation system to rigorously test the outcomes of machine learning models
- Processed simulation results for further analysis and configuration machine learning

KEY ACHIEVEMENTS

Created Robust REST APIs

Designed APIs with high interoperability.

LANGUAGES

English

Proficient

EDUCATION

Bachelor of Science in Software Engineering

Uttar Pradesh Technical University

📅 2013 - 2017 📍 India
