

# Vyshnavi Kanchi

vyshnavirao2000@gmail.com | [www.linkedin.com/in/vyshnavikanchi](https://www.linkedin.com/in/vyshnavikanchi) | (513) 462-4411

## PROFESSIONAL SUMMARY

Motivated Data Engineer with around 5 years of experience in building and supporting data pipelines and data models. Skilled in developing and maintaining ETL processes, ensuring data quality, and contributing to business intelligence solutions. Proficient in using AWS (including AWS Glue, Redshift, S3), Azure (including Azure Data Factory, Azure Databricks). Experienced in Power BI for creating dashboards and visualizations that provide insights to stakeholders. Familiar with Python, SQL, and Spark, and comfortable working with cloud-based data platforms to support data movement and analysis in both cloud and on-premises environments.

## TECHNICAL SKILLS

|                                                   |                                                                       |
|---------------------------------------------------|-----------------------------------------------------------------------|
| <b>Programming Languages:</b>                     | Python, SQL, Java                                                     |
| <b>Data Engineering &amp; ETL Tools:</b>          | Databricks, PySpark, Azure Data Factory, AWS Glue, Apache Airflow     |
| <b>Tools:</b>                                     | ERP, Excel, Service now, Microsoft Office                             |
| <b>IDEs:</b>                                      | PyCharm, Visual Studio code, Jupyter Notebook                         |
| <b>Big Data Technologies:</b>                     | Hadoop, Spark, Kafka, Flink                                           |
| <b>Databases</b>                                  | DB2, SQL Server, PostgreSQL, Relational Databases, MongoDB, Cassandra |
| <b>Cloud Technologies:</b>                        | Microsoft Azure, AWS                                                  |
| <b>Business Intelligence &amp; Visualization:</b> | Power BI, Excel                                                       |

## CERTIFICATIONS

- Microsoft Certified: Azure Administrator

## PROFESSIONAL EXPERIENCE

### Graduate student Engineer

Jan 2024-Dec 2024

- Created ETL workflows using Python, SQL, Databricks to extract, transform, and load data from multiple sources, ensuring efficient data integration into structured databases.
- Designed, deployed, and maintained scalable, fault-tolerant data pipelines while analyzing complex datasets and documenting findings for academic research.
- Wrote Python and PySpark scripts to automate data cleaning, preprocessing, and validation using Pandas, NumPy, and PySpark, reducing manual effort by 80% and improving data accuracy.
- Processed datasets using Azure Databricks, performing data cleaning, transformation, and analysis with PySpark and SQL to ensure data quality and accuracy.
- Constructed and developed interactive dashboards in Power BI, leveraging SQL queries to generate insights on student performance, project metrics, and research data trends
- Proficient in writing and optimizing DAX queries to create complex measures, calculated columns, and interactive visualizations in Power BI for data-driven insights

### Packaged App Development Associate -Accenture solutions private ltd, India

Sep 2021-Aug 2023

- Designed and implemented scalable ETL pipelines using Python, AWS Glue, and Lambda to process both structured and unstructured data, optimizing workflows and improving data integration across manufacturing systems.
- Architected and managed data lakes on Amazon S3, implementing efficient partitioning and compression strategies to enhance storage and retrieval performance, reducing latency by 35%.
- Utilized AWS Redshift for data warehousing, designing optimized data models that improved query performance by 40%, enabling more accurate and faster business insights for manufacturing processes.
- Developed real-time data streaming pipelines using Apache Kafka and Amazon Kinesis, supporting event-driven architectures for seamless data ingestion and processing, enabling faster decision-making across production systems.
- Optimized data transformation workflows with PySpark in AWS Glue, processing large datasets and reducing job completion times by 30%, improving overall pipeline efficiency.
- Leveraged Snowflake to streamline data warehousing and reporting, optimizing storage and query performance, and cutting data retrieval times by 30% for enhanced reporting accuracy.
- Automated data pipeline monitoring and alerts using AWS CloudWatch, reducing pipeline failure rates by 25% through proactive issue identification and resolution.
- Built cloud-native ETL solutions using AWS Glue and Lambda, integrating real-time and batch data for comprehensive insights into production and supply chain processes.
- Led the design and implementation of containerized applications on AWS EKS, improving scalability, fault tolerance, and system availability for data engineering workflows.

- Enhanced ETL performance by optimizing SQL queries for Snowflake and Redshift, reducing query execution times by 40% and ensuring efficient data loading and reporting.
- Implemented and managed IAM roles and policies to ensure secure access to cloud resources, adhering to data security best practices and compliance standards.
- Developed and optimized Power BI dashboards, transforming raw data into actionable business intelligence, reducing manual reporting efforts by 30% for stakeholders.
- Spearheaded the adoption of DataOps practices, integrating CI/CD pipelines using Jenkins and Terraform to automate the deployment and testing of data engineering solutions, improving deployment times by 30%.
- Coordinated with business stakeholders to define reporting requirements, optimizing data models and visualizations to enhance operational decision-making and forecasting accuracy.
- Utilized Apache NiFi to automate data movement and transformation, streamlining ETL processes and improving pipeline efficiency by 35% across multiple manufacturing systems.
- Collaborated with cross-functional teams to design and implement real-time reporting solutions, leveraging AWS Kinesis and CloudWatch to monitor key metrics for operational efficiency.
- Led technical discussions and code reviews within the team, ensuring adherence to best practices in cloud architecture, security, and scalability for data engineering solutions.
- Managed data pipeline deployments using Terraform, automating cloud resource provisioning and reducing deployment errors by 20%.
- Conducted regular performance audits on data pipelines, optimizing storage solutions and query performance, resulting in a 30% improvement in data processing efficiency.
- Automated S3 file system management using AWS CodePipeline for efficient file storage, processing, and retrieval across cloud environments.
- Implemented AWS KMS for secure data encryption and key management, ensuring compliance with cloud security best practices.
- Utilized AWS Transfer Family and Storage Gateway for secure data transfer and seamless hybrid cloud integration.
- Developed CloudFormation templates to automate AWS infrastructure provisioning and resource management for data pipelines.
- Set up and managed EC2 instances and AWS Lambda functions for scalable and efficient cloud computing and serverless operations.
- Deployed and maintained Kubernetes clusters, ensuring high availability and efficient orchestration for containerized applications.

**IT project Coordinator - Arjay Enterprises, Hyderabad**

**Jan 2020-Aug 2021**

- Developed interactive Power BI dashboards and reports to track company growth, production efficiency, and sales performance, key performance indicators (KPIs) and supporting data-driven decision-making.
- Conducted data analysis using SQL and Excel to identify production inefficiencies, sales trends, and opportunities for cost reduction within the supply chain.
- Collaborated cross-functionally with business teams to deliver actionable insights, contributing to optimized production scheduling and inventory management.
- Monitored data quality and implemented validation checks to ensure the accuracy and reliability of project reporting.
- Improved inventory tracking and demand forecasting by analyzing sales and production data, contributing to reduced waste and better resource planning.

## **EDUCATION**

---

**Master of Science in Information Technology**

**Aug 2023 – Dec 2024**

University of Cincinnati, Cincinnati, Ohio

- Relevant course work: Azure data engineering, Advanced Algorithms, Machine learning, Data driven cyber security
