SUMMARY

As a Senior Software Engineer with 7 years of experience, I specialize in building high-performance, scalable backend systems with **Golang**, alongside extensive expertise in **Python**. I have a deep understanding of **Golang's** concurrency model and have leveraged it to develop efficient, high-throughput applications, optimizing both latency and system resource usage. I've used **Golang** in a variety of contexts, from microservices architectures to building distributed systems, often combined with containerization tools like **Docker** and orchestration via **Kubernetes**. In addition to my **Golang** expertise, I've worked extensively with cloud platforms such as **AWS** and **GCP**, where I've implemented solutions that integrate seamlessly with cloud-native services and manage large-scale database migrations. I also have extensive experience with both **SQL** (MySQL, MS SQL) and **NoSQL** (MongoDB, Firestore) databases, creating scalable data models and writing efficient queries. My work with **RESTful APIs** focuses on delivering reliable, high-performance services that meet both technical and business requirements. As a leader, I mentor junior engineers, promote best practices, and have led teams in **Agile** environments, delivering successful projects on time and within scope.

SKILLS

GoLang	HTML	Apache Spark
Python	CSS	Terraform
C/C++	jQuery	Ansible
Shell scripting	Ajax	Jenkins
Bash	MySQL	Github
JavaScript	Oracle	Git
Echo	Redis	OAuth2
GraphQL	FastAPI	JWT
gRPC	AWS (Lambda, EC2, ECS, S3,	PyTest
Django	RDS, DynamoDB)	GoMock
Django REST Framework	Google Cloud Platform	Delve
PySpark	Docker	xUnit
Pandas	Kafka	Jest
NumPy	RabbitMQ	Agile, Scrum methodologies
Flask	Microservices	System Testing
React	Kubernetes	

EDUCATION

Bachelor of Science in Computer Science August 2015 – April 2019
University of Florida

EXPERIENCE

Senior Software Engineer

August 2023 - Present

Salesforce | San Francisco, CA 94105

- Led the development of **RESTful API** services using **Golang**, enabling seamless communication between internal systems and **third-party APIs**.
- Built **microservices** in **Golang** to handle large volumes of data from **PostgreSQL**, improving performance and scalability.
- Developed **gRPC** and **RESTful microservices** to meet product needs, focusing on efficient data handling and low latency.
- Mentored junior developers on best practices for **Golang** programming, using goroutines, channels, and design patterns to improve code performance.
- Collaborated with business stakeholders to gather requirements and translate them into user stories using **Jira**.
- Integrated **Jenkins** with **Git** for **CI/CD**, automating the build, test, and deployment process.
- Containerized applications with **Docker** and managed them on **Kubernetes**, ensuring scalability and reliability.
- Refactored key **Python-based microservices** to **Golang**, significantly improving throughput and reducing memory usage.
- Implemented security features for **gRPC** and **RESTful APIs** using **JWT** tokens and **SAML** for secure authentication.
- Improved data pipelines and **microservices** to handle more throughput and reduce latency.
- Wrote unit tests using **Go's** testing package and Testify, ensuring the quality and reliability of the code.
- Worked in an **Agile (Scrum)** environment, delivering projects on time and meeting customer expectations.
- Optimized systems to handle concurrent data using goroutines and channels, improving application performance.

Software Engineer

July 2021 – July 2023

EPAM Systems | Chicago, IL 60606

- Developed microservices using **Golang**, **Docker**, and **MongoDB**, enabling scalable and high-performance backend solutions.
- Built and maintained **RESTful APIs** and **SOAP** web services, enhancing application integration and communication between services.
- Worked with **PostgreSQL** and **AWS S3** to design a microservice that extracts and processes data, generating reports and sending them to cloud storage.
- Applied **Design Patterns**, **multithreading**, and **goroutines** to improve performance and scalability in backend applications.
- Utilized Gorilla mux for **HTTP RESTful** routing and integrated **GORM** for database operations in **Golang**.
- Contributed to Test Driven Development (**TDD**) by writing automated unit tests in **Golang** for **API** services, ensuring code reliability.
- Implemented **CI/CD pipelines** using **Jenkins** for automated deployments to development and production environments.
- Worked in **Agile Scrum methodology** to gather business requirements and convert them into user stories via **Jira**.
- Developed and deployed web services and **microservices** on **AWS** and **Google App Engine**, enhancing cloud application capabilities.
- Gained hands-on experience with **ReactJS** for frontend development, integrating **REST APIs** and building interactive user interfaces.

- Managed **Docker** containers and **Kubernetes** for container orchestration, ensuring seamless deployment and scalability across environments.
- Enhanced server-side functionality with **Node** for back-end services, **Sequelize ORM** for database integration, and **Express** for **API** creation.
- Collaborated closely with cross-functional teams to refine and optimize development workflows, ensuring timely project delivery.

Senior Developer

May 2019 – June 2021

Biz4Group | Orlando, FL 32819

- Designed and developed **RESTful APIs** and **microservices** using **Golang** and **Python**, ensuring scalability, security, and high performance.
- Built backend services to handle high-throughput data processing, leveraging Goroutines and channels in **Golang** for concurrency.
- Developed event-driven architectures using **Kafka** and **RabbitMQ** for real-time data processing.
- Optimized database performance by writing efficient **SQL** queries, stored procedures, and indexing strategies for **PostgreSQL**, **MySQL**, and **MongoDB**.
- Implemented authentication and authorization mechanisms using **JWT**, **OAuth**, and **SAML** to secure **APIs**.
- Containerized applications using **Docker** and orchestrated services with **Kubernetes** for scalability and deployment automation.
- Developed and maintained server-side logic with **Flask** and **FastAPI**, ensuring efficient **API** request handling and response optimization.
- Integrated caching mechanisms using **Redis** and **Memcached** to improve application performance and reduce database load.
- Automated **CI/CD pipelines** using **Jenkins** and **GitHub Actions**, ensuring smooth deployment and version control.
- Wrote unit tests and integration tests in Go (**Testify**) and Python (**pytest**) to validate functionality and maintain high code quality.
- Followed Agile and Scrum methodologies, collaborating closely with cross-functional teams to deliver backend solutions on time.
