

AAKASH TANDUKAR | Senior iOS Developer
Mobile: +1 732-207-7692
Email: me.aakash.tandukar@gmail.com

PROFESSIONAL SUMMARY:

Seasoned **Senior iOS Developer** with over **11+ years of experience** in designing, developing, and maintaining robust iOS applications using **Swift, Objective-C, and SwiftUI**. Proven expertise in building scalable, high-performance apps with seamless user experiences and clean architecture (MVC, MVVM, VIPER). Strong background in integrating **RESTful APIs, CoreData, Firebase, and ARKit** for real-time and immersive features. Successfully published 10+ apps to the App Store with millions of downloads. Adept at leading end-to-end app development, CI/CD pipelines, code reviews, and mentoring junior engineers. Skilled in Agile/Scrum environments with a focus on quality, efficiency, and continuous improvement. Experienced in delivering high-performance cross-platform apps with Flutter (Dart), optimized for both iOS and Android platforms.

TECHNICAL SKILLS:

Languages	Swift 5, Objective-C, Dart, JavaScript
Frameworks	SwiftUI, UIKit, Combine, CoreData, ARKit, AVFoundation, MapKit, StoreKit, CoreLocation, CocoaPods, RxSwift
Development Tools	Xcode IDE, Instruments, Interface Builder, Postman
Architectures	MVC, MVVM, VIPER, Clean Architecture
Testing & Deployment	XCTest, XCUITest, Unit Testing, TestFlight, Firebase App Distribution, CI/CD Pipelines (Codemagic, Bitrise, GitHub Actions, Fastlane)
Networking	RESTful APIs, GraphQL, JSON, Alamofire, URLSession, WebSockets
Database & Persistence	SQLite, Realm, CoreData, Firebase Realtime Database, Firestore, Keychain
Cloud & Push Services	Google Firebase (Auth, Messaging, Remote Config, Analytics), Apple Push Notifications, CloudKit
3rd-Party Integrations	Payment Gateways (Stripe, PayPal), Google Maps SDK, Facebook SDK, Sign in with Apple/Google, Lottie, OneSignal, Crashlytics
Dev Tools & Methodologies	Git, GitHub/GitLab/Bitbucket, Jira, Confluence, Agile (Scrum/Kanban), Test-Driven Development (TDD), Behavior-Driven Development (BDD), CI/CD
Performance & Monitoring	Instruments (Time Profiler, Allocations, Leaks), Crashlytics, Sentry, Firebase Performance Monitoring
App Store & Distribution	App Store Connect, Provisioning Profiles, Code Signing, Entitlements, Beta Testing
Cross-Platform	Flutter, Kotlin Multiplatform, Phonegap, Ionic

EDUCATION:

- Master of Science in Information Technology, Sikkim Manipal University, India
NOV 2014 | OCT 2016
- Bachelors of Science in Information Technology, Sikkim Manipal University, India
AUGUST 2011 | JULY 2014

PUBLISHED APPS:

- **Merchantrade Money (Malaysia based mobile wallet & remittance app)** – Enhanced transaction security & performance.
<https://apps.apple.com/us/app/merchantrade-money/id6689505138>
- **eRemit Singapore (Singapore based remittance app)** – Integrated multi-currency support & fraud detection.
<https://apps.apple.com/us/app/eremit-singapore/id1198917306>
- **CDC Cinemas (Nepal-based Online movie ticket booking app)** – Designed a seamless user experience & secure payment system.
- **Keepeat (Dubai-based online food delivery platform that connects users with local restaurants and food vendors)** – Integrated real-time tracking & location-based services.
- **Rent a Car Club (Bangkok based vehicle rental app)**
Developed peer-to-peer vehicle rental features with secure payment options.
- **Kim Beach (Australia-based Health and Fitness App)**
Integrated weight loss program with everyday meal plans, gym plans, workouts and yoga videos, vision boards, daily journaling.
- **Smartflow (Netherlands Based Industry Testing & Inspection App)** – Smartflow is a SaaS solution used to digitize inspections & checks within the Energy, Petro, Maritime & TIC industries.
<https://apps.apple.com/us/app/smartflow/id1445012503>

PROFESSIONAL EXPERIENCE:

Cotiviti, South Jordan, UT
iOS Developer - Senior iOS Developer

Mar 2025 - Present

Project: ETL Analytics App

Developed and led the enhancement of Cotiviti's internal healthcare auditing and analytics mobile application aimed at enabling on-the-go access to claims data, audit workflows, and real-time notifications for healthcare auditors and analysts. The iOS app integrates secure authentication, encrypted document viewing, case management features, and real-time collaboration with backend services.

Responsibilities:

- Lead the architecture, design, and development of the iOS application using **Swift**, **UIKit**, and **SwiftUI**.
- Design the app using scalable **MVVM** architecture and oversee end-to-end development from planning to deployment.
- Integrate **OAuth2-based authentication** with biometric support (**Face ID**, **Touch ID**) for secure access. Ensured user authentication with modern security standards and seamless biometric login flows.
- Implement **offline-first architecture** using **Core Data** and synchronized with backend via **REST APIs**.
- Create reusable components and custom views using **MVVM** architecture.
- Develop encrypted document viewing and in-app **PDF annotation** using **PDFKit** and **Core Graphics**. Allowed users to securely view and annotate sensitive healthcare documents.
- Integrate **push notifications** using **Firebase Cloud Messaging (FCM)** to notify users of audit status updates. Handled background notifications and in-app handling through **NotificationCenter**.

- Ensure app performance using **Instruments** (e.g., Time Profiler, Allocations, Leaks) for profiling and debugging.
Identified and resolved memory leaks, improved app responsiveness, and ensured stability.
- Collaborate with DevOps to implement **CI/CD pipelines** using **GitHub Actions** and **Fastlane**. Automated build, test, and deployment processes to streamline delivery and improve release frequency.
- Conduct security reviews and implemented features to ensure **HIPAA compliance**. Applied encryption, **SSL pinning**, and **App Transport Security (ATS)** to protect healthcare data.
- Enhance **accessibility support** using **VoiceOver**, **Dynamic Type**, and custom accessibility actions. Ensured ADA compliance and usability for visually impaired users.
- Utilize the **Combine** framework for reactive data binding and background data synchronization. Enabled cleaner asynchronous programming and efficient state updates.
- Implement unit tests with **XCTest** and UI automation with **XCUITest**. Achieved high test coverage and prevented regressions during feature updates.
- Participated in **backlog grooming**, **sprint planning**, and created **technical documentation**. Maintained clarity on scope and direction for both development and future maintenance.
- Coordinate with **UI/UX designers** to match **Cotiviti's design system** using **Figma** prototypes. Ensured design fidelity, responsiveness, and visual consistency.
- Lead the migration of legacy modules from **Objective-C** to **Swift**. Modernized codebase while ensuring backward compatibility and performance.
- Optimize network communication with **URLSession**, caching strategies, and **background fetch**. Reduced network load and improved data reliability for offline/online transitions.
- Integrate **Firebase Analytics** and custom logging to monitor usage, crashes, and performance. Enabled data-driven improvements and proactive issue resolution.

Environment: Swift, Objective-C, UIKit, SwiftUI, Combine, Core Data, PDFKit, MVVM, OAuth2, Biometric Auth, REST API, URLSession, FCM, Firebase Analytics, GitHub Actions, Fastlane, XCTest, XCUITest, Instruments, SSL Pinning, ATS, HIPAA, Figma

Vanilla Tech, Kathmandu Nepal

July 2021 - Feb 2025

Senior iOS Developer

Project: Led and contributed to multiple iOS projects involving AR, security, real-time data handling, and cross-functional collaboration with product and design teams.

Responsibilities:

- Designed and developed 4+ scalable iOS applications using **Swift**, **SwiftUI**, and **UIKit** from scratch, ensuring code reusability, performance optimization, and compliance with Apple's Human Interface Guidelines.
- Improved **REST API** integration efficiency by 40% through optimized parsing, background threading (**GCD/OperationQueue**), and caching strategies, resulting in faster data loading and smoother user experience.
- Implemented **ARKit**-based face recognition for biometric authentication, enhancing app security and offering users a modern, secure, and intuitive login experience.
- Utilized **CoreData** and **Realm** for persistent storage, enabling apps to function offline while ensuring fast, efficient data retrieval and seamless user experience even without connectivity.
- Mentored junior iOS developers, leading peer code reviews, sharing best practices, onboarding new hires, and promoting clean architecture principles such as **MVVM** and **SOLID** design patterns.

- Built and maintained **CI/CD pipelines** using **Fastlane** and **GitHub Actions** to automate testing, code signing, builds, and **TestFlight** uploads, accelerating deployment cycles and reducing manual errors.
- Published multiple apps on the **App Store**, managing the full lifecycle from provisioning, certificates, and compliance to final submission, version control, and responding to user feedback and crash reports.
- Adopted **MVVM** and **VIPER** architectures, improving code scalability, separation of concerns, and maintainability across multiple projects and teams.
- Developed comprehensive unit and UI tests with **XCTest** and **XCUITest**, achieving over 90% test coverage, leading to early bug detection and robust app performance in production.
- Worked closely with designers to implement pixel-perfect UIs, maintaining UI consistency across all device sizes using **Auto Layout**, Adaptive UI, and custom components in **SwiftUI**.
- Integrated **Firebase** services such as **Authentication**, **Crashlytics**, **Analytics**, and **Remote Config** to track performance metrics, crash reports, and deliver targeted feature rollouts without new releases.
- Implemented push notifications and real-time updates using **Firebase Cloud Messaging (FCM)** and **Apple Push Notification Service (APNS)**, keeping users informed and engaged with timely updates.
- Created smooth UI/UX animations and custom gestures with **SwiftUI** and **UIKit** to enhance visual appeal and interactivity, contributing to higher app ratings and engagement.
- Performed advanced performance profiling using **Xcode Instruments (Time Profiler, Leaks, Allocations)** to identify bottlenecks and reduce memory usage, resulting in a 30% drop in app crashes.
- Developed modular, reusable components and shared UI libraries for internal use across multiple apps, significantly reducing development time and promoting consistency.
- Actively participated in **Agile/Scrum** rituals including daily stand-ups, sprint planning, backlog grooming, and retrospectives, contributing to on-time delivery and cross-functional alignment.
- Followed **GitFlow** branching model and enforced branch protection rules to maintain code quality, avoid conflicts, and ensure smooth collaboration within the development team.
- Integrated third-party SDKs and services such as **Stripe** (for payments), **Google Maps** (for location services), **Lottie** (for animations), and **OneSignal** (for notifications), expanding app capabilities.
- Managed **App Store Connect** configurations, including provisioning profiles, entitlements, build versions, beta testing with **TestFlight**, and production release coordination.
- Collaborated with QA and Product teams to conduct user research feedback loops, usability testing, and iterative refinement based on real-world usage data to continuously improve app design and features.
- Built high-performance cross-platform apps using **Flutter 3.16 & 3.22**, ensuring native-like Android and iOS UX.
- Optimized Flutter performance with **Flutter DevTools** (startup time, rendering jank, app size reduction). Designed **core shopping flows** with Flutter's declarative UI, custom widgets, responsive layouts (LayoutBuilder, MediaQuery), Material & Cupertino integration, and smooth animations (Hero, Animation Controller).
- Implemented **in-app search engine** with GraphQL_flutter & http, leveraging query batching, pagination, and caching.
- Achieved **90% test coverage** (flutter_test, mockito, integration_test, Golden Tests).
- Migrated **Flutter Calendar features to Swift/SwiftUI** for vehicle tracking.

- Integrated **Flutter platform channels** to connect hybrid components with native Swift modules.
- Led **code reviews**, mentored junior Flutter developers, and streamlined Agile workflows.

Environment: Swift, SwiftUI, UIKit, ARKit, CoreData, Realm, Firebase, REST APIs, GraphQL, Git, Xcode, Fastlane, XCTest, FCM, APNS, Agile (Scrum), Jira, GitHub Actions, Agile Scrum

8Square, Kathmandu, Nepal
Senior iOS Developer

July 2018 – July 2021

Project: M1 Remit – Singapore-Based Remittance Mobile Application

Led the development of M1 Remit, a secure and user-friendly iOS application enabling international money transfers. The app supported real-time transaction tracking, biometric login, and live chat support for a better user experience. Delivered multiple releases that drove user adoption and business growth in the APAC region.

Responsibilities:

- Led the end-to-end development of the M1 Remit iOS app, from architecture design to **App Store** release, increasing transactions by 30% post-launch.
- Implemented secure authentication using biometric **Face ID** and **Touch ID**, enhancing app security and user convenience.
- Integrated **RESTful APIs** for seamless real-time money transfers, beneficiary management, and transaction history display.
- Enhanced in-app real-time chat features using **Firebase Realtime Database** and **Firestore**, resulting in improved user engagement and faster support.
- Established **CI/CD pipelines** using **Fastlane** and **Bitrise**, cutting deployment and release time by 80%.
- Optimized UI rendering and screen transitions, reducing load times by 30% and improving overall app responsiveness using **Swift** and **UIKit**.
- Built modular components and reusable views using **Swift** and **UIKit**, accelerating development cycles and enforcing consistency.
- Managed **App Store** distribution, handling provisioning profiles, certificates, code signing, and **TestFlight** for beta testing.
- Implemented **CoreData** and caching strategies for offline support, ensuring uninterrupted user experience during network loss.
- Collaborated with cross-functional teams including backend, QA, and product to ensure timely delivery of features and fixes.
- Led weekly sprint planning and code reviews, mentoring junior developers and ensuring clean, maintainable codebase.
- Created and executed unit tests and UI automation using **XCTest** and **XCUITest** to maintain high-quality standards.
- Integrated analytics and crash reporting tools like **Firebase Crashlytics** and **Google Analytics** for continuous monitoring and improvement.
- Followed **MVVM** architecture pattern, enhancing app maintainability and testability.
- Maintained comprehensive documentation for app flows, API contracts, build processes, and onboarding guidelines.

Associate iOS Developer**Project:** CDC Cinemas – Online Movie Ticket Booking App

Designed and developed a user-friendly ticket booking application for CDC Cinemas, supporting secure payments, seat selection, movie scheduling, and real-time notifications. The app significantly streamlined the booking process and enhanced user satisfaction.

Responsibilities:

- Developed **CDC Cinemas iOS app** from scratch and created the entire application architecture, designed user interfaces, and implemented features using Swift and UIKit to deliver a modern and engaging booking experience.
- Integrated **Firebase Authentication** and **Firestore** and enabled secure login and real-time database sync for user profiles, tickets, and history, ensuring seamless experience across sessions.
- Enabled secure in-app payments with **Stripe SDK** and implemented encrypted payment gateway using **Stripe**, ensuring PCI-compliance and secure transactions directly from the app.
- Built real-time seat selection and availability system and developed dynamic seat layout screens and implemented conflict resolution logic to prevent double booking of seats.
- Utilized **Core Animation** and **UIKit Dynamics** and delivered engaging micro-interactions such as animated seat selection, confirmation modals, and view transitions to enhance user engagement.
- Implemented Auto Layout and Size Classes and ensured responsive UI that adapts fluidly across all iPhone and iPad screen sizes, supporting both portrait and landscape orientations.
- Integrated **Firebase Analytics** and monitored user behavior, drop-off points, and popular features to inform business decisions and UX improvements.
- Managed the entire App Store deployment process and handled certificates, provisioning profiles, build archiving, and submission through **App Store Connect** and **TestFlight**.
- Collaborated with backend developers for API integration and designed request-response models, handled failures, caching, and data parsing for smooth interaction with the backend services.
- Integrated **Firebase Cloud Messaging (FCM)** and implemented push notifications for booking confirmations, promotions, and movie reminders, improving re-engagement.
- Applied **MVC** architecture pattern and structured the code to separate UI, business logic, and data handling for better scalability and maintainability.
- Conducted manual and automated tests and wrote unit and UI tests with **XCTest** to catch edge cases, regressions, and ensure quality before releases.
- Developed reusable UI components and created modular views (movie cards, time pickers, alerts) to be reused across screens, reducing development time.

Environment: Swift, UIKit, Firebase (Auth, Firestore, Analytics, FCM), Stripe SDK, RESTful APIs, Core Animation, CoreData, Auto Layout, APNs, Git, Xcode, TestFlight, Jira, MVC, Agile Scrum

IT@Himalaya (procit.com), Kathmandu, Nepal

Nov 2014 - May 2017

Junior iOS Developer

Project: Smartflow – Business Process Automation Tool

Responsibilities:

- Contributed to the design and development of *Smartflow*, an iOS-based business process automation tool aimed at improving operational workflows and reducing manual overhead.
- Developed key features using **Swift** and **Objective-C**, adhering to **MVC** and **MVVM** architectural patterns for clean and scalable code.
- Integrated **Apple Push Notification Service (APNs)** and in-app messaging, leading to a **30% increase in user engagement**.
- Worked with **CoreData** for efficient local data storage and synchronization across business workflows.
- Consumed **RESTful APIs** to enable real-time communication between the app and backend services.
- Utilized **Instruments** for performance tuning and memory leak detection, improving app stability.
- Collaborated in an **Agile Scrum** environment, participating in sprint planning, daily standups, and code reviews.
- Managed app builds and distribution through **Xcode**, **TestFlight**, and the **Apple Developer Portal**.
- Used **Git** for version control and code collaboration within a cross-functional team.

Environment: Swift, Objective-C, UIKit, CoreData, APNs, RESTful APIs, In-App Messaging, Git, Xcode, TestFlight, MVC, MVVM, Instruments, Apple Developer Portal, Agile Scrum
