

Chinthala Srujan Reddy

Email: srujanreddychinthala@gmail.com | Mobile: 6822847699 | Location: Lewisville, TX

PROFESSIONAL SUMMARY

- 7+ years of professional experience in data engineering and analytics.
- Proven expertise in designing, building, and owning complex data models and infrastructure for large-scale data environments.
- Strong proficiency in Python and SQL to develop data pipelines and support data-driven decision-making.
- Extensive experience collaborating with cross-functional teams including Finance, Security, and Enterprise Technology to enhance system performance and meet governance requirements.
- Skilled in implementing data quality monitoring systems with source-to-target data validations and anomaly detection.
- Knowledgeable in utilizing Snowflake to drive business impact and support analytics initiatives.
- Capable of presenting complex data insights to business leaders and technical stakeholders effectively.

SKILLS

Programming Languages: Python, SQL, R, Java, Scala, Bash, C++, JavaScript

Frameworks & Libraries: Apache Spark, Pandas, NumPy, Dask, Apache Airflow, Flask, Streamlit

Databases & Data Warehousing: Snowflake, SQL Server, PostgreSQL, MongoDB, MySQL, Oracle, Azure SQL Database

Big Data & Streaming: Apache Kafka, Apache Hive, Apache HBase, Apache Flink, Azure Databricks, AWS Glue

Cloud Platforms: AWS (S3, EC2, Lambda, Redshift), Azure (Azure Data Factory, Azure Synapse), Google Cloud Platform

DevOps & CI/CD Tools: Jenkins, Docker, Kubernetes, Terraform, Git, Azure DevOps

Testing & QA: Apache JMeter, Postman, Great Expectations, dbForge Studio, DataRobot

Security & Compliance: Data Encryption, IAM, GDPR, HIPAA Compliance, Security Auditing, Data Governance

Monitoring & Observability: Grafana, Prometheus, AWS CloudWatch, Azure Monitor, DataDog

Collaboration Tools: JIRA, Confluence, Slack, Microsoft Teams, Trello

Documentation Tools: Markdown, Sphinx, LaTeX

Operating Systems: Windows, Linux, macOS

CERTIFICATIONS

- Azure Data Engineer Associate (DP-203)
- AWS Certified Solutions Architect – Associate
- Databricks Lakehouse Fundamentals

EDUCATION

Masters in Information Systems

Trine University, 4.0 GPA

WORK EXPERIENCE

Bank of America – Plano, TX

Senior Data Engineer – Nov 2023 to Present

- Spearheaded the design and implementation of scalable data pipelines using Apache Spark and Python, improving ETL performance by 40% and enabling real-time data processing across financial applications.
- Engineered a comprehensive data quality monitoring system, incorporating source-to-target validations and anomaly detection, which reduced data discrepancies by 30% and enhanced reporting accuracy for compliance.
- Collaborated with cross-functional teams including Finance, Security, and Product Management to align data architecture with business needs, resulting in a 25% increase in data-driven decision-making efficiency.
- Automated data ingestion processes using AWS Glue, reducing manual intervention by 50% and accelerating data availability for analytics.

- Developed interactive dashboards utilizing Tableau, providing key insights into performance metrics for executive leadership, which facilitated strategic planning and operational improvements.
- Led initiatives to enhance data governance frameworks, ensuring compliance with industry regulations and best practices, which mitigated risks and improved data security posture.
- Optimized existing data models for enhanced performance, reducing query response times by 35% and improving user satisfaction among internal stakeholders.
- Conducted training sessions for junior engineers on best practices in data engineering and the use of Snowflake, fostering a culture of continuous learning and innovation.
- Implemented CI/CD pipelines using Jenkins, streamlining deployment processes and reducing deployment times by 40%.
- Analyzed complex datasets to derive actionable insights, directly influencing product enhancements and driving a 20% increase in user engagement.

Technologies Used: Apache Spark, Python, AWS Glue, Tableau, Snowflake, Jenkins, SQL, Data Governance, CI/CD, Data Quality Monitoring

St. Jude Children's Research Hospital – Memphis, TN

Data Engineer – Jan 2021 to Jul 2023

- Designed and developed robust data pipelines utilizing SQL and Python to integrate disparate healthcare data sources, improving data accessibility for research teams by 50%.
- Collaborated with data scientists to develop predictive models that leveraged big data analytics, which increased patient outcome predictions' accuracy by 30%.
- Implemented a data quality framework that included automated testing and validation processes, resulting in a 35% reduction in data errors and enhancing research integrity.
- Built and optimized data warehouses using Snowflake, improving data retrieval times by 45% and enabling faster reporting capabilities for clinical trials.
- Engaged with cross-functional teams to identify data needs and develop tailored solutions that supported various research initiatives, leading to a 15% increase in project success rates.
- Developed comprehensive documentation of data processes and workflows, ensuring knowledge transfer and compliance with institutional policies.
- Leveraged Apache Airflow for orchestrating data workflows, which improved operational efficiency and reduced manual workload by 60%.
- Conducted performance tuning of SQL queries, resulting in a 50% improvement in data processing speeds for critical research applications.
- Participated in the design of a centralized data lake architecture, enhancing data sharing capabilities across departments and supporting collaborative research efforts.
- Provided mentorship to interns and junior staff, fostering skill development in data engineering best practices and tools.

Technologies Used: SQL, Python, Snowflake, Apache Airflow, Data Warehousing, Data Quality Framework, Big Data Analytics, Predictive Modeling, Documentation

Meijer – Grand Rapids, MI

Data Engineer – May 2018 to Dec 2020

- Developed and maintained ETL processes using Talend and SQL to streamline data integration from various retail systems, cutting data processing time by 30%.
- Collaborated with business analysts to gather requirements for reporting tools, creating dashboards that provided actionable insights into sales trends and inventory management.
- Implemented data validation techniques that improved data integrity, reducing the occurrence of errors in sales reports by 25%.
- Assisted in the migration of on-premise data warehouses to cloud-based solutions, enhancing scalability and reducing operational costs by 20%.
- Worked with cross-functional teams to design and execute data-driven marketing campaigns, resulting in a 15% increase in customer engagement.

- Optimized database queries and performance, achieving a 40% decrease in query execution times and improving overall system responsiveness.
- Engaged in regular data audits to ensure compliance with internal policies and industry standards, enhancing data governance practices across the organization.
- Created automated reports using Power BI, enabling real-time visibility into key performance indicators for stakeholders.
- Supported the integration of machine learning models into the data pipeline, facilitating advanced analytics capabilities for predictive insights.
- Developed training materials and conducted workshops on data engineering tools and practices for team members.

Technologies Used: Talend, SQL, Power BI, Data Warehousing, Cloud Migration, Data Validation, ETL Processes, Machine Learning Integration, Data Audits
