

IURII VADATURSCHII

DEVOPS ENGINEER

- 9+ years of comprehensive experience in System Administration, System Engineering, Cloud Technologies, CI/CD, DevOps, Bash scripting, and infrastructure automation.
- Strong team player with cross-functional collaboration experience, bridging gaps between development, operations, and security teams to drive DevOps excellence.
- Focused on high deployment frequency and low lead time for change, implementing CI/CD pipelines with GitOps to streamline software delivery.
- Driven to reduce change failure rates through automated testing, resilient processes, and best deployment practices.
- Committed to rapid incident recovery through proactive monitoring, automated rollbacks, and resilient Kubernetes architectures.

📍 Sacramento, CA

Professional Experience

Sr. DevOps Engineer | *Early Warning Services* Oct 2022 - Present

San Francisco, CA

- Migrated legacy Kubernetes architecture using **VMware PKS** to **AWS EKS**, eliminating PKS licensing costs and reducing operational overhead by leveraging fully managed EKS architecture while improving scalability, reliability, and cloud-native integration.
- Orchestrated complex infrastructure deployments using **Ansible**, **Terraform**, and **Kubernetes** ensuring seamless integration and scalability, improving lead time to delivery by 25%.
- Developed and standardized an extensive **Terraform** modules library, transitioning from public modules to fully audited, in-house modules, ensuring security, compliance, and reusability across infrastructure.
- Managed and optimized cloud native systems daily, working with **AWS** and its native services ensuring high availability as well as cost optimization.
- Skilled in implementing **RBAC** (Role-Based Access Control), **IAM** policies, and **Okta** integration, bolstering security posture and access management across diverse environments, including utilization of jump hosts for secure access.
- Refactored current **Infrastructure as Code** design from **Terraform** to **Terragrunt** to help expand over multiple regions and environments, enabling developer based infrastructure deployments and removing repeatable code.
- Experienced in implementing comprehensive **CI/CD** pipelines using **GitLab** for version control and **Harness** for continuous delivery, fostering a culture of automation and collaboration within development teams.
- Led the transformation of current **CI/CD pipelines** to **GitOps** based workflows improving lead time for change, deployment frequency, change failure rate, and mean time to restore.

AWS DevOps Engineer | *Quorum Technologies, Inc.* Jan 2020 - Oct 2022

Sacramento, CA

- Accomplished the transformation of the legacy monolithic application to a modern microservices architecture on **Amazon EKS**, leveraging advanced Kubernetes orchestration techniques and **Terraform** for infrastructure provisioning.
- Implemented robust **CI/CD** pipelines using **ArgoCD** and **GitLab** automating application deployment workflows and ensuring seamless integration with enterprise-wide applications, resulting in accelerated release cycles and enhanced deployment reliability.
- Implemented **HashiCorp Vault** for secrets management, ensuring sensitive data protection, role-based access control, and automated secrets rotation within the environments.

- Established an enterprise-grade artifact repository using **JFrog Artifactory** to store and manage **Docker** images, **Helm** charts, and other artifacts, facilitating an efficient software distribution cycle.
- Integrated **AppDynamics** for comprehensive real-time application performance monitoring and proactive troubleshooting, ensuring optimal application health and performance.
- Implemented a multi-faceted monitoring and alerting system using **Splunk** for log analysis, **CloudWatch** for **AWS** resource monitoring, and **PagerDuty** for intelligent alerting and incident management, ensuring 24/7 availability and rapid incident response.

System Engineer | *Mindgrub Oct 2017 - Oct 2019*

Baltimore, MD

- Built and managed containerized applications using Docker, improving deployment efficiency and consistency.
- Wrote and maintained extensive Ansible playbooks to automate server configurations and deployments.
- Used Chef and Puppet to provision and configure on-prem servers, ensuring standardized environments.
- Managed certificate authorities (CA) and handled SSL/TLS certificate issuance and renewals to ensure secure communication.
- Patched OS-level vulnerabilities across Linux and Windows servers, reducing security risks and maintaining compliance.
- Monitored system performance and troubleshoot issues to maintain high availability and reliability.
- Collaborated with cross-functional teams to streamline infrastructure processes and improve operational efficiency.

Linux System Administrator | *Pretransition Technology Group April 2016 - August 2017*

Chicago, IL

- Collaborated extensively with WEB, DBA, and APP teams to install, configure, and administer new **Fault Tolerant Cluster Linux** servers (predominantly RedHat) and **VMware** ESX servers across **IBM**, **HP**, and **Dell** hardware, enhancing system reliability and performance.
- Monitored server performance leveraging tools such as sar, top, free, vmstat, iostat, and Nagios, maintaining an exceptional uptime of 99.98% and ensuring seamless service availability.
- Devised and successfully implemented a comprehensive disaster recovery system, including robust policies and procedures, enhancing the organization's resilience to potential data loss events.
- Configured a range of services including **DNS**, **DHCP**, **NFS**, **Sendmail**, **Apache** Web Server, **Tomcat**, **LAMP** stack (Linux+Apache+MySQL+PHP), and **Samba**, supporting diverse operational requirements and enhancing system functionality.
- Streamlined troubleshooting for user accounts, security objects, and authorizations. Developed **bash** scripts for sudo users, facilitating user support, new account setup, and password resets, thereby improving system security and user satisfaction.

Skills

AWS Cloud Computing:

EC2·Autoscaling·RDS·ECS·Apache·Cassandra·ElasticSearch·OpenSearch

Networking:

VPC·Route53·Internet·Gateway·NATGateway·NACLs·Site-to-Site VPN·Route-Tables·Client-VPN·Endpoints·Load Balancing

Infrastructure as a Code:

Terraform·CloudFormation·OpenTofu

IAM:

AWS IAM·Azure AD·AWS Directory Services·SAML·OpenID·IAM Policies·SCP·Organizational Units

Automation:

Bash·Cron·Ansible·Groovy

ETL:

AWS Glue·Athena·ElasticSearch·OpenSearch·Azure Data·Factory

Monitoring:

DataDog·Nagios·Splunk·CloudWatch·Grafana·Prometheus·ELK

System Administration:

RedHat·CentOS·Ubuntu·Amazon·Linux·Apache·Tomcat Servers·SMTP·POP·IMAP·DNS·LAMP·MySQL·DynamoDB·RDS·NoSQL·Aurora·Serverless

Education & Certifications

Technical University of Moldova

Bachelor of Technology - BTech, Information Technology

Sept 2011 - May 2014

AWS Certified Solutions Architect - Associate

[Credential ID CEV1Y6BKQB4Q13KT](#)
