Publications: [How to create an Image list in react native](#)

IT professional with over 9+ years of experience in software development, specializing in web hosting, online auctions, remarketing, and telecommunications. Expertise in application development, troubleshooting, and testing, with a commitment to delivering efficient and high-quality solutions.

PROFESSIONAL SUMMARY:

- Proficient in HTML5, CSS3, JavaScript, Typescript, React (JS/Native), Node JS, and Bootstrap, showcasing adeptness in front-end technologies.
- Demonstrated expertise in utilizing the Redux library, employing Redux Saga and Thunk for managing side-effects effectively and state management.
- Provided production support by identifying, fixing, and deploying bug fixes in real-time
- Worked with the product managers to successfully maintain and deploy applications to the iOS App Store and Android Play Store as per timelines.
- Developed dynamic web pages using React concepts, JSX, and implements One-way data flow for creating engaging UI experiences.
- Architect designed and developed web and enterprise applications with technologies like Web Services, Typescript, JavaScript, and HTML.
- Holds expertise in JavaScript programming, with a deep understanding of latest ES6 features like promises, classes, async/await, de-structuring assignment, modules, and extended parameter handling.
- Proficient in DOM manipulation and implementing RESTful APIs for effective data exchange.
- Built RESTful APIs and third-party service to enhance application functionality.
- Developed and deployed microservice based services and architecture for the applications
- Applied Model-View-Controller (MVC) concepts through AJAX for browsers and event-driven apps which helped in maintaining coding standards across the team.
- Created pages and developed UI screens, layouts using CSS3 and style sheet management frameworks such as SASS, LESS, Tailwind, Bootstrap, and Styled Components.
- Proficient in responsive design techniques, utilizing the Bootstrap grid system, Flex Box, and Grid.
- Familiar with system configuration tools like Webpack.
- Addressed cross-browser compatibility issues and proficient in debugging across Chrome, Firefox, Safari, and Edge.
- Actively engaged in SDLC phases, demonstrating proficiency in both Agile and Waterfall workflows.
- A highly effective communicator, adept at conveying both technical and non-technical concepts, with strong troubleshooting skills for both independent and collaborative tasks.
- Managed all facets of the software configuration management process, overseeing code compilation, packaging, release methodology, and application configurations.

TECHNICAL SKILL:

Technologies	JavaScript, Typescript, HTML5, CSS3, Bootstrap, Responsive Web Design, JSON, DOM, XML, Web API.
Libraries	React (JS/Native), Styled Components, Redux (Thunk/Saga), React Native Navigation, Jest, Ramda JS, Moment, Formik, Bootstrap 5, Node.js, Express.js, and Tailwind.
Web Services	SOAP, REST.
IDE's	Visual Studio (VS Code), Sublime Text Editor, Web Storm.
Version Controls	Git, GitLab and Bitbucket.
Database Tools	Sequel Pro, Dbeaver and PhpMyAdmin.
Browsers	Chrome, Edge, Firefox, and Safari.

PROFESSIONAL EXPERIENCE:

Group One - is a web hosting provider offering domain registration, website hosting, email services, and website-building tools. It caters to individuals, small businesses, and beginners looking for an easy way to create and manage their websites, including WordPress hosting.

Feb 2022 – Present

Full stack/React Native/Node Js/Sr. Software Engineer

Responsibilities:

- Craft efficient User Interaction screens using HTML5, CSS3, JavaScript, React Native, React Native Navigation, Ramda JS, Redux (Thunk/Saga), AJAX, and JSON.
- Anchored the project by organizing the tasks and communicating goals with the fellow developers on shore and off shore.
- Managed all aspects of the software configuration management process including code compilation, packaging, deployment, release methodology and application configurations.
- Analyzed the requirements and resolved bugs reported by the users.
- Owned the GitHub project repo and deployed the builds to QA and productions using Jenkins, Spinnaker, CodePush (Mobiles) and APKs.
- Handled production support by working on prod bugs, fixes and deployments.
- Integrated SonarQube for better code coverage which helped in identifying errors at an early stage.
- Discussed with the product managers and implemented Zendesk SDK for customer support and chat on the go.
- Efficiently track and document bugs using JIRA, maintaining comprehensive issue history.
- Built RESTful APIs and optimized bottle necks, reducing the API response time.
- Developed and implemented the third party APIs.
- Actively contribute to Agile Scrum meetings, offering insights for iterative progress and issue resolution.
- Design visually appealing styles and layouts with Styled Components, utilizing dynamic features.
- Seamlessly facilitate service and UI wiring, optimizing app performance.
- Develop, write unit tests, and refine web apps with Jest, ensuring optimal performance.
- Manage version control and codebase repositories through Git/GitLab/Bitbucket.
- Maintained and deployed the apps to iOS App store and Android play store.
- Collaborate across teams to integrate cross-platform syncing features, enriching functionality.
- Strategically manage daily releases through CICD pipelines using GitLab.
- Skillfully implement JavaScript libraries for precise form validation and enhanced interactivity.
- Master retrieving JSON data from Web APIs, skillfully parsing and visualizing using components.
- Develop reusable React components, manage states using Redux for optimized functionality.

- Design projects from scratch using modern ECMA Script (ES6), tools like Babel, TypeScript, and Webpack.

Environment: Typescript, React Native, Node JS, Ramda JS, Formik, Styled Components, AJAX, Web API, and JSON, JIRA, ES5, ES6.

Copart - is an online auto auction company that specializes in selling used, salvaged, and wholesale vehicles. It provides a platform for individuals, dealerships and businesses to buy and sell cars, trucks, motorcycles, and other vehicles. Copart operates globally, offering online bidding and vehicle sales through its digital marketplace.

May 2017 – Feb 2022

Front End/React (JS/Native)/Software Engineer

Responsibilities:

- Created intuitive and interactive screens using Bootstrap, maintaining consistent style guides, themes, templates, and interface design.
- Ensured adherence to user interface standards throughout website development and maintenance, guaranteeing a unified user experience.
- Facilitated seamless server communication through Ajax, enabling dynamic information retrieval on web pages.
- Developed robust client-side validation code using JavaScript which enhanced data integrity and user-friendliness.
- Executed cross-browser compatible and standards-compliant CSS-based page layouts, ensuring visual coherence.
- Utilized various JavaScript and jQuery libraries, combined with AJAX, to establish form validation and engaging interactive elements.
- Efficiently fetched JSON data from Web APIs, skillfully parsing and visually representing using diverse data visualization components.
- Collaborated closely with UI/UX designers to translate concepts into vibrant web-based internal system interfaces and prototypes.
- Managed version control adeptly via Git and GitHub repositories, ensuring organized and seamless code management.
- Addressed cross-browser compatibility intricacies, meticulously debugging, and enhancing functionality across different browsers.
- Translated wireframes into comprehensive templates, encompassing brand identity, menus, forms, buttons, icons, images, and application widgets with harmonious color schemes.
- Collaborated effectively with architects and back-end developers to gather requirements and introduce innovative features, enhancing application functionality.
- Stay updated on the latest trends and best practices in front-end development.
- Proactively explore and adopt new tools, libraries, and frameworks that can enhance development processes.
- Utilized JIRA as a robust bug tracking system, ensuring effective issue management and resolution.
- Work collaboratively with diverse teams, such as designers, back-end developers, and product managers, to achieve effective cooperation and synergy.
- Keep team members and stakeholders informed by communicating updates on progress, addressing challenges, and presenting solutions effectively.
- Implemented Google API to facilitate real-time translations, enhancing user experience and simplifying the translation process for users.

Environment: React Native, Ramda JS, Redux Forms, Styled Components, AJAX, Web API, and JSON, JIRA, ES5, ES6.

AT&T - is an American telecommunications company that provides mobile phone services, internet, television, and business solutions. It is one of the largest wireless carriers in the United States, offering a range of plans for individuals and businesses. AT&T also provides fiber-optic internet, streaming services, and digital entertainment through platforms like DIRECTV.

August 2015 – May 2017

Software Test Analyst

Responsibilities:

- Examine and analyze software requirements to comprehend the intended functionality that needs testing.
- Engaging with stakeholders to resolve uncertainties and establish a comprehensive understanding of requirements.
- Developing test plans that explain the testing approach, scope, resources, schedule, and entry/exit criteria of the application.
- Assessing the effort required for testing and appropriately assigning resources.
- Create comprehensive test cases from software requirements and design specifications which were given by the stakeholders.
- Designing test scenarios that cover various use cases and potential system interactions across various applications.
- Developed and maintained automated test scripts to improve testing efficiency.
- Identifying opportunities for test automation and implementing automated testing frameworks for a better test automation
- Collaborated with developers and other stakeholders to investigate and resolve defects as early as possible.
- Working closely with developers, business analysts, and other team members to for a clear understanding of requirements and any new issues.
- Reported test progress, results, and potential risks to project stakeholders.
- Involved in daily scrum calls and On-site Off-shore meetings with the clients and product development team.
- Creating and maintaining test documentation, including test plans, test cases, and test execution reports.

Environment: Selenium, Manual Testing, Cucumber, Jira

Education:

- Degree of Bachelor of Computer Application from Swami Vivekanada Institute of Technology (JNTU)

Status: H1B
