## EXPERIENCE

---

**Software Engineer, Wamy**  March 2025 – present

- **Full-Stack Development:** Designed and implemented core components of Wamy's AI-powered property insurance claims platform, contributing to database architecture, backend logic, API integrations, and UI enhancements for a seamless user experience.
- **AI Systems Integration:** Developed and optimized AI-driven features for automated document analysis, risk assessment, and dynamic scoring, enabling real-time claim processing and advanced analytics for underwriting accuracy.
- **Cross-Functional Collaboration:** Wore multiple hats in an early-stage startup environment, driving end-to-end development cycles from concept to deployment, ensuring scalability and alignment with business goals.

**Software Engineer, Splinter**  August 2024 – January 2025

Splinter is an open-source data ingestion pipeline designed to transform unstructured data for AI workflows like retrieval-augmented generation (RAG). (TypeScript, Python, AWS Cloud, React)

- **Cloud Infrastructure & Automation:** Architected a scalable, cost-efficient AWS infrastructure (S3, Lambda, ECS, Batch) with scale-to-zero design, optimized data processing (~70% time reduction), and automated deployment using a custom CLI tool (80% faster setup).
- **AI Feature Development:** Developed an interactive RAG sandbox leveraging OpenAI models to enhance AI data validation and relevance, integrating event-driven triggers for real-time data updates and eliminating stale data.
- **Real-time Monitoring & Frontend:** Built an observability dashboard using React and WebSockets with persistence, providing live pipeline metrics and ensuring frontend-backend synchronization for continuous system monitoring.

**Software Engineer, Open-Source** January 2023 – June 2024

Developed open-source software, some highlighted projects include:

- **RequestDock:** A web-based tool to help developers inspect and debug webhooks in real time, streamlining the troubleshooting of HTTP request data. (JavaScript, React, Node.js, Express, MongoDB)
- **FluxCart:** A feature-rich e-commerce shopping cart supporting user authentication, product management, and a responsive UI. (React, Node.js, Express, and MongoDB)

**Graduate Research Assistant, Driscoll Laboratory, FSU Engineering** August 2020 – December 2022

- Conducted research on cellular biomechanics and molecular force transmission using tension sensors, live-cell imaging, and engineered environments, with a focus on data-driven insights.
- Applied advanced data analysis techniques in MATLAB to quantify molecular-scale force dynamics.
- Developed computational models to enhance the understanding of protein activation in cellular mechanosensing.

## EDUCATION

---

**M.S., Biomedical Engineering, Florida State University** 2020 – 2022 | Tallahassee, FL

**B.S., Biomedical and Health Sciences Engineering,** 2016 – 2020 | Chapel Hill, NC  
University of North Carolina at Chapel Hill

## SKILLS

---

### Languages and Frameworks

JavaScript, Typescript, Express, Python, SQL, React, Jest, HTML/CSS, Tailwind CSS, Next.js

### Cloud

AWS (CDK, SDK, EC2, ECS, Lambda, API Gateway, S3, DynamoDB, RDS, SQS, SNS), IaC, CI/CD

### Other Technologies

REST APIs, Node.js, PostgreSQL, MongoDB, Git/Github, Docker, Bash, ETL Pipelines, Agile/Scrum
