SUMMARY

- Experienced SQL Server DBA with over 6 years of expertise in optimizing complex database environments, including installation, configuration, administration, maintenance, performance tuning, backup/restore, and disaster recovery procedures across SQL Server versions from 2012 to 2022.
- Extensive experience migrating scripts to production environments and adept at creating/modifying stored procedures, triggers, cursors, and functions to align with specific business requirements.
- Work closely and effectively with business and technical teams in a cross-functional and cross-matrixed business and technical environment.
- Excellent communication skills, with the ability to interact effectively with various technical/business users.
- Perform basic to advance routine DBA activities & service requests using ServiceNow and Jira.
- Led and implemented successful database migration initiatives, ensuring data was transferred smoothly with little to no operational disruption.
- Experienced in diagnosing and resolving database problems, including issues related to space management, deadlocks, locking, blocking and optimizing performance.
- Expertise in implementing HADR mechanisms such as AlwaysOn availability groups, replication, log shipping, mirroring, and clustering.
- Skilled in implementing SQL Server security measures, including object-level permissions, user creation, configuring authentication modes, and assigning user roles.
- Proficient in using external tools like Redgate and DBA tools for comprehensive database management tasks.
- Respond promptly to and resolve database-related alerts, emails, and tickets.
- Participate in 24/7 on-call rotations and contribute to monthly maintenance work.

EDUCATION

Addis Ababa University

- Information Technology
May 2013

TECHICAL EXPERTISE

- Installation, Configuration, Backups & Restore and Troubleshooting.
- Data Migration, Database Security and Project Management.
- Cloud platform, Azure SQL, and Azure SQL Managed Instance.
- PowerShell, Redgate, Golden-Gate, dbatools, SSIS, and SSRS.
- Teamwork and collaboration, Communication and Problem-Solving.
- SSMS, Windows Server, SQL Server Profiler, Extended Event, DTA, DMV, and Query Analyzer.
- High Availability & Disaster Recovery (HADR), Always On, Replication, Log shipping and DB mirroring.
- T-SQL, PowerShell scripts, Store Procedures, Triggers, Auditing, Automation, and Query Optimization.

EXPERIENCE

SQL SERVER DBA

PNC

Oct 2021 – Present

- Skilled in installing, upgrading, maintaining, and configuring the SQL Server Suite, including SSIS and SSRS services.
- Utilized Database Tuning Advisor (DTA), Performance Monitor, and Activity Monitor for performance tuning and issue resolution.
- Create maintenance routines and tasks to maintain peak database performance.
- Developed and maintained PowerShell scripts to automate daily database administration tasks, such as backups, restores, and log shipping.
- Demonstrated proficiency in performance monitoring, tuning, query optimization, client/server connectivity, and database consistency checks using DBCC Utilities.
- Optimized storage space management through the implementation of data compression and backup strategies.
- Managed SQL Server environments adhering to strict SLAs, while effectively defining and meeting RPO and RTO objectives to ensure business continuity and data availability.
- Determined the most effective way to increase performance through hardware upgrades, server configuration changes, and index/query changes.
- Created and maintained maintenance plans for system optimization, including fragmentation checks and backup routines.
- Skilled in SQL Server Reporting Services (SSRS) for report generation and management.
- Created server logins, database users, and custom database roles, as well as assigned users to specific roles to control access to data.
- Configured Transparent Data Encryption (TDE) for SQL Server databases, managing encryption keys and certificates efficiently.
- Managed database object lifecycle, from creation to modification, in response to development team requests.
- Implemented and maintained backup and recovery procedures to ensure data integrity and minimize downtime, using tools such as SQL Server Agent and third-party backup solutions.
- Deployed various High Availability and Disaster Recovery (HADR) strategies like AlwaysOn Availability Groups, replication, log shipping, mirroring, and failover clustering to ensure database availability.
- Setting up the Transaction Replication in between SQL Server databases and also from SQL Server to Oracle databases.
- Utilized tools like Red Gate, SQL Compare, and Data Compare for database schema comparisons.
- Executed migration projects, moving SQL Server 2012/14 to SQL Server 2019.
- Participate in migrating databases from on-premises to Azure cloud.
- Stayed current with the latest patches and updates for SQL Server, applying them to non-production and production environments in a timely and efficient manner to ensure system security and stability.
- Configured DB SMTP mail and alert systems for timely notifications and system monitoring.
- Provided 24/7 production database on-call support.
- Supervised and mentored junior DBAs.

SQL SERVER DBA

Abbott

Sep 2019 – Sep 2021

- Expert in installing, configuring, and deploying MS SQL Server 2012, 2014, 2016, 2017, and 2019.
- Developed and standardized a comprehensive Standard Operating Procedure (SOP) for conducting health checks on SQL Server to ensure optimal performance, identify potential issues early, and maintain system integrity and reliability.
- Developed and executed Transact-SQL (TSQL) and PowerShell scripts for a range of operations.
- Aligned database backups with business Recovery Point Objectives (RPO) and performed routine backup tests to achieve Recovery Time Objectives (RTO).

- Monitored real-time database events with Change Data Capture (CDC) tool, recording them into the database.
- Implemented AlwaysOn High Availability and configured HADR solutions including clustering, replication, and log shipping to ensure system resilience.
- Implemented SSIS for robust ETL processes, enhancing data migration, integration, and transformation efficiencies.
- Collaborated with infrastructure and development teams to ensure database reliability, providing expert technical support to developers and end-users.
- Created server logins, database users, and custom database roles, as well as assigned users to specific roles to control access to data.
- Executed migration projects, moving SQL Server 2012/14 to SQL Server 2019.
- Troubleshoot performance issues related to query optimization, tempdb, log file growing fast, identify and release lock, block, and deadlock.
- Optimized database design by reviewing and implementing changes to a database schema, table structures, and indexes to improve query performance.
- Utilized Database Tuning Advisor (DTA), Performance Monitor, and Activity Monitor for performance tuning and issue resolution.
- Exported and imported data from text files, excel to SQL Server database using bulk copy insert and BCP utility.
- Utilized tools like Red Gate, SQL Compare, and Data Compare for database schema comparisons.
- Participated in an after-hours on-call rotation, providing support for monitoring, installations and patches, migrations, and other tasks alongside team members.

JUNIOR SQL SERVER DBA

ExxonMobil

Mar 2018 - Sep 2019

- Installed and configured Microsoft SQL Server instances, ensuring optimal performance and security for enterprise environments.
- Collaborated with development teams to optimize SQL queries, stored procedures, and indexing strategies, improving application performance and user experience.
- Utilized SQL Server Management Studio (SSMS) for day-to-day database administration tasks, including monitoring, troubleshooting, and performance tuning.
- Participate in database migration projects, upgrading databases from SQL Server 2012 to 2016, ensuring a seamless transition with minimal downtime.
- Managed database backup and restoration procedures to maintain data integrity and minimize downtime during critical operations.
- Experienced in deploying and managing third-party database tools for advanced monitoring, performance tuning, and database management.
- Developed and implemented maintenance plans to automate routine tasks, such as backups, index maintenance, and database consistency checks.
- Monitored database performance using SQL Server Profiler and Database Engine Tuning Advisor to identify and address bottlenecks and inefficiencies.
- Created and maintained detailed documentation of database configurations, procedures, and policies to support knowledge sharing and compliance with IT standards.
- Actively participated in disaster recovery planning and testing, ensuring business continuity and rapid recovery in case of system failures.
