PROFESSIONAL SUMMARY

- Over 4 years of experience in administering SQL Server databases across various versions, including 2012, 2014, 2019, and 2022.
- Expertise in designing, installing, and maintaining high availability (HA) and disaster recovery (DR) solutions on MS-Windows and SQL Server clustered environments.
- Proficient in tuning, monitoring, troubleshooting, and baselining SQL Server database performance, optimizing T-SQL queries for efficiency.
- Extensive experience with Microsoft Azure Database Services, including configuration and DBA support for optimal performance.
- Skilled in administering SQL Server SSIS/SSAS/SSRS services to meet organizational requirements and standards.
- Strong background in SQL Server database security, auditing, and troubleshooting to ensure system integrity and reliability.
- Proficient in managing cloud-based databases, including migration, configuration, and performance optimization in Azure and AWS environments.
- Hands-on experience with Elasticsearch in Azure, supporting cloud modernization strategies, and managing cloud services.
- Expertise in implementing and maintaining database backup, replication, and DR strategies for business continuity.
- Experienced in developing PowerShell scripts for database activities and Windows server operations.
- Proven ability to design and develop logical and physical database designs from customer requirements.
- Strong collaborator, working effectively with cross-functional teams, including application development and infrastructure teams.
- Adept at providing 24/7 production support, including application debugging and off-hour support.
- Experienced in integrating SQL Server with big data solutions such as Hadoop and Spark for advanced analytics.
- Strong knowledge of implementing best practices for security, data protection, and compliance in cloud environments.
- Skilled in developing and optimizing T-SQL queries, stored procedures, functions, and triggers for data manipulation and retrieval.
- Extensive experience in supporting application development teams and production/operations, focusing on SQL Server DBA tasks.
- Proficient in managing and monitoring multiple databases, implementing performance management, and tuning strategies.
- Continuously updated on emerging technologies and trends in the SQL Server ecosystem, including machine learning and artificial intelligence.

Technical Skills

Programming and Frameworks: SQL, Python (Pandas, NumPy, Scikit-learn, TensorFlow), R (ggplot2, dplyr, caret, randomForest), JavaScript (React.js, Node.js, Express.js)

Databases: MySQL, Oracle, NoSQL, PostgreSQL, MS SQL, MongoDB, Cassandra, Azure SQL Server, Microsoft Access

Visualization and Cloud Platforms: Tableau, Power BI, Microsoft Azure (PaaS, IaaS), AWS (EC2, S3, RDS), Jenkins.

Database Technologies: SQL Server 2012–2019, Azure SQL Database, AWS RDS for SQL Server, PostgreSQL, MySQL, MongoDB

High Availability/DR: Always On Availability Groups, Log Shipping, Replication, Mirroring

Scripting & Tools: T-SQL, PowerShell, SQL Agent Jobs, SSMS, Azure CLI, SQL Profiler

Performance Tuning: Query Optimization, Index Maintenance, Deadlock & Blocking Resolution

Monitoring & Automation: RedGate, SolarWinds, Azure Monitor, CI/CD (Jenkins) **Specialization**

Technologies: Data Analysis, Machine Learning, Deep Learning, Cloud Computing, Big Data Technologies, ETL processes, Statistical Analysis, experiments for data-driven decision-making.

Experience

Doubletne

Jan 2024 – Present

Data Enginner/Admin

USA

- Administered 70+ production SQL Server databases on Azure SQL and AWS RDS ensuring 99.99% availability.
- Configured Always On Availability Groups and implemented geo-replication for high availability.
- Configured and maintained Log Shipping, Database Mirroring, and Replication to support DR and reporting environments.
- Worked with .TUF and .WRK files during log shipping troubleshooting and recovery scenarios.
- Performed regular database refresh activities across development and staging environments.
- Led SQL Server upgrade from 2016 to 2019, minimizing downtime via pre-staging and log shipping.
- Performed L2/L3 level DBA support activities including patching, access control, and monitoring.
- Created and managed SQL Server logins and users; granted roles and permissions in both on-prem and Azure environments.
- Automated routine backups (Full/Differential/Transaction Log) and monitored backup job success across environments.
- Verified and tested restoration processes ensuring RTO/RPO objectives were met.
- Monitored replication latencies and resolved synchronization issues between publisher and subscriber servers.
- Automated routine backups, health checks, and alerting using PowerShell and SQL jobs.
- Tuned slow-performing queries reducing report execution time by 45% using execution plans and indexing.
- Developed end-to-end ETL pipelines using Azure Data Factory, ingesting data from Azure Blob Storage, REST APIs, and on-prem sources; applied transformations using Data Flows and stored procedures.
- Built data ingestion frameworks and streaming pipelines on Azure Synapse and Databricks to handle batch and real-time data with fault-tolerant architecture.
- Engineered scalable data pipelines to process and sort large volumes of semi-structured files (JSON, Parquet, CSV) stored in Azure Data Lake Gen2 and Blob Storage.
- Utilized Microsoft Fabric's Lakehouse architecture for unified data storage and modeling, integrating with OneLake and Power BI for advanced analytics.
- Designed and implemented star and snowflake schema-based data models for analytics workloads; performed dimensional modeling for Power BI dashboards.
- Built and optimized ELT jobs on Snowflake using Python and SQL, leveraging Snowpipe for continuous data ingestion and transformation.
- Developed reusable Python scripts for API data extraction, JSON parsing, and incremental loads; automated data quality checks using Pandas and NumPy.
- Worked extensively with T-SQL for stored procedures, views, window functions, and CTEs to support reporting and analytical layers.
- Implemented database security auditing, RBAC controls, and encryption policies in cloud environments.
- Migrated SQL Server databases from on-premises to Azure IaaS/PaaS using backup files and automated pipelines.
- Scheduled cost monitoring and metrics reporting using Azure Monitor and Advisor recommendations.

Techecy

Jan 2020 – Dec 2022

Data Engineer

India

- Built and optimized ETL workflows for data integrity and transformation.
- Installed and configured SQL Server 2012/2016/2019 across standalone and clustered environments.
- Managed database migrations and upgrades, ensuring zero data loss and minimal business disruption.
- Designed and maintained SSIS packages and SSRS reports for ETL workflows and operational reporting.
- Implemented replication and log shipping to maintain data sync across DR and reporting environments.
- Conducted daily health checks, error log reviews, and space monitoring across 100+ databases.
- Wrote and maintained PowerShell scripts to automate SQL Server tasks and server maintenance.
- Designed and developed logical and physical database schemas based on customer requirements.
- Collaborated with developers for stored procedure optimization and production issue resolution.
- Created real-time data visualizations in Power BI integrating Azure Synapse datasets, and published role-based dashboards for internal teams.
- Implemented data profiling, cleansing, and normalization routines to ensure high data quality and consistency across multiple environments.

- Participated in version control, code reviews, and CI/CD pipeline deployments for ETL workflows using Azure DevOps.
- Collaborated across teams to optimize data transformations, reduce pipeline latency, and enhance system performance using caching and parallelism techniques.
- Designed, developed, and fine-tuned complex T-SQL queries, stored procedures, functions, and triggers to enhance application performance and support data processing needs.
- Documented deployment processes and implemented Azure SQL Database error handling and unit testing.
- Optimized MySQL, PostgreSQL databases, improving query performance.
- Mentored teams in data analytics, enhancing overall productivity.

EDUCATION

Northwest Missouri State University

Missouri, USA

Master's in Computer and Information Sciences

Jan 2023 – Apr 2024

Relevant Coursework: Databases, Java, Networking, Web Development, Information Systems Design, Business Analytics

Bachelor of Technology, Electrical Engineering

India

Kakatiya University

Aug 2017 – May 2021

Projects

Northwest Waste Management System | Full Stack Developer

Jan '24 – Apr '24

- Designed and developed a comprehensive waste tracking system for the Northwest Recycle Center, enabling efficient management of waste collection, storage, and shipment.
- Created use cases, assigned tasks, and monitored progress using timesheets to ensure timely project completion.
- Built an interactive front-end using React.js, HTML, CSS, and JavaScript with role-based dashboards to provide user-specific access and insights.
- Developed a secure and scalable Node.js backend with Express.js, handling API requests and managing business logic efficiently.
- Implemented MS SQL Server as the primary database, optimizing complex queries and stored procedures to ensure efficient data retrieval and storage.
- Created a dynamic dashboard using React.js and Chart.js to track key sustainability metrics, empowering stakeholders with real-time data for waste reduction initiatives.

Private Chat Application | AWS EC2, S3, Web sockets, Express.JS,Node.JS Oct '24 – Nov '24

- Developed a real-time private chat application utilizing Node.js for the backend and React.js for the front end, ensuring seamless user interactions and responsiveness.
- Implemented Web Sockets for real-time communication, enabling instant messaging and notifications, which enhanced user engagement.Utilized Amazon S3 for storing and retrieving user-uploaded media files, optimizing performance and reducing latency.
- Deployed the application on AWS EC2, ensuring scalable server deployment and managing load effectively to accommodate user growth.
- Configured Security Groups to limit the users accessing the application through malicious platforms.

FitStreak App | React,AWS EC2, S3, Mongo DB, CI/CD, RESTAPIs

Oct '24 – Nov '24

- Designed and developed a comprehensive fitness application using JavaScript and React Native, providing users with personalized workout and nutrition plans.
- Integrated fitness tracking features that visualize user progress through charts based on previous records using React Chart.js, enhancing user engagement and motivation.
- Used NoSQL Databases MongoDB Atlas for data storage and retrieval and Redis for caching data.
- Employed RESTful APIs built with Express.js to facilitate secure communication between the client and server, ensuring efficient data handling.
- Implemented JWT for authentication and authorization, enhancing security by managing user sessions effectively.
- Configured CI/CD pipelines using Jenkins to automate the process of deployment. Deployed the application on AWS EC2, enabling reliable performance and scalability to meet user demands.

Certifications

Microsoft Azure Database Administrator Associate
