chakramu786@gmail.com
Cedar Park, TX

SUMMARY

Innovative and results-focused Principal Data AI Engineer with extensive experience in building and maintaining data pipelines, developing algorithms for process automation, and leading technical teams. Proven expertise in developing enterprise software, driving operational efficiency, and enhancing data-driven decision-making. Adept at fostering collaboration, building partnerships, and providing valuable predictive insights to business teams.

HIGHLIGHTS

- Technical leadership in developing data pipelines and automated workflows
- Expertise in data acquisition, ingestion, cleansing, transformation, and migration
- Strong background in machine learning, neural networks, and advanced algorithms
- Proficient in optimizing and automating data processes and workflows
- Experienced in mentoring data engineers, scientists, and analysts
- Skilled in building and deploying models for visual recognition and natural language processing

EXPERIENCE

Technical Leader

Salesforce.com / San Francisco, CA / Oct 2013 to Aug 2017, Sep 2019 to Current
Environment: Agile methodologies, Java, Selenium Webdriver, Aura, LWC, Rest API, Enterprise WSDL, APEX, Visualforce, Automation, Hadoop, Gridforce, Metamind, Salesforce Einstein Vision API, Python, Hybrid Mobile Apps, DataRobot, SageMaker, Jupyter Notebook, Databricks, Pandas, GCP.

- **Technical Leadership:** Acted as the technical lead for a team of engineers, data scientists, data analysts, software developers, and business SMEs to deliver new products and services.
- **Einstein Copilot for Employees:** Developed Einstein Copilot for Employees using the Einstein Architecture, which includes Hyperforce, Data Cloud, Generative AI Stack, and Generative Customer 360 Applications.
- **Einstein Copilot for Experience Sites:** Delivered a fully functional Search AI Assistant using Einstein GPT, enabling conversational exchanges for finding site-specific answers. Architected and developed a sophisticated conversational interface powered by LLMs and retrieval-augmented generation (RAG) techniques.
- **Copilot for Salesforce Help Content:** Spearheaded the Copilot for Salesforce Help Content initiative, leveraging retrieval-augmented generation (RAG) techniques to surface semantic search answers and content summaries based on Salesforce product support content.
- **Copilot for Salesforce Experience Builder:** Developed and integrated Copilot for Salesforce Experience Builder using RAG to enhance user interactions by providing contextual and relevant answers based on site-specific content.
- **Data Pipelines:** Built, optimized, and automated data pipelines in both cloud and on-premise infrastructure.
- **Data Engineering:** Developed and maintained data workflows, including data acquisition, ingestion, cleansing, transformation, and migration.
- **Algorithm Development:** Developed algorithms to enable process automation and created models for visual recognition and natural language processing.

- **Predictive Insights:** Curated rich datasets and prepared data for predictive and prescriptive modeling, providing insights and predictive information to business teams.
- **Engineering Excellence:** Ensured data sets were thoroughly tested before release and simplified, optimized, and automated processes and workflows.
- **Team Mentorship:** Mentored data engineers, scientists, and analysts in best practices, fostering a culture of continuous learning and improvement.

Senior Software Solutions Engineer & Data Analyst

Amex GBT / Aug 2017 to Sep 2019

Environment: Hadoop, HDFS, Hive, Apache Spark, RESTful services API, Power BI, Tableau, Big Data Technologies.

- **Data Mining & Analysis:** Analyzed emerging patterns and trends from large datasets using data warehousing components and infrastructure integration.
- **AI Chatbots:** Developed AI chatbots using data models built on FAQs for GBT end customers, including features such as user authentication, user tracking for analytics, and speech to text.
- **Recommendation Systems:** Designed and developed a hotel recommendation system for GBT travelers based on past travel history and geo-location utilizing RESTful services API.
- **Traveler Profile Data Model:** Built a smart traveler profile data model to present a 360° view of the traveler using big data technologies like Hadoop.
- **Optimization:** Implemented fine-tuning mechanisms using Apache Spark to optimize database performance and query efficiency.
- **Dashboards & Reports:** Designed interactive and intuitive dashboards and reports using Power BI & Tableau to visualize sales performance and travel data.
- **Data Management:** Improved data management functions, including data integration, standardization, and distribution. Collaborated with business and technology teams to build scalable solutions for high-volume, event-driven business needs.

Senior Software Engineer, Server & Tools Business division

Microsoft Corp/ Redmond WA / Aug 2006 to Sep 2013

Environment: C#, .NET, Visual Studio, SQL Server, .NET Adapter SDK, WCF, WF, web services, stress testing, Web Tooling Extensions, Azure SDK, Web Platform Installer, WebMatrix.

- Shipped the following products: Windows Communication Foundation & Workflow Foundation in .NET 3.5 SP1, .NET 4.0 and .NET 4.5, Visual Studio 2008 SP1, Visual Studio 2010, Visual Studio 2012, Windows 7, Windows 8, .NET Adapters SDK, Web Platform Installer v4, WebMatrix v2, Azure SDK 1.8.
- Developed test plans that effectively minimized manual testing, leading to more effective code coverage for the features under test.
- Implemented test frameworks for UI automation of Web Platform Installer and WebMatrix.
- Implemented test framework for generic setup test automation of various products in Azure Application and Platforms team.
- Designed and developed functional, setup and stress test cases for WCF, WF & .NET Adapter SDK.
- Contributed to the development of stress test infrastructure and tools for executing stress runs for WCF and WF.
- To person for test development using test frameworks and for test failure analysis.

- Reviewed product and test code, stress attack points and test designs and provided critical feedback to improve overall quality of the products.
- Focused efforts on validating the overall quality of the feature area, in addition to finding bugs.
- Added customer-experience scenarios to implementation specifications that were adopted into test design.

EDUCATION

Master of Science Computer Science

Oregon State University / Corvallis OR / 2002 - GPA 3.6

Bachelor of Technology Mechanical Engineering

Jawaharlal Nehru Technological University / Kakinada India / 1997 - Distinction

ADDITIONAL INFORMATION

- Volunteer at VYASA International School that educates under economic children at Yerpadu, AP, India.
- Recipient of the competitive Oregon Student Laurels scholarship in 2000.
- Ranked #1 on the Oregon State University Computer Science department's comprehensive exam.
- Ranked among the top #1 percentile of the statewide engineering entrance exam among more than 100,000 participants.
