

Chidananda Reddy Madala

Senior Performance Engineer | Performance Architect | Load Testing Expert

 **Email:** nandachiru@gmail.com

 **Phone:** +1 5107593567

 **LinkedIn:** <https://www.linkedin.com/in/nandachiru/>

 **Location:** Durham, NC

 **Certifications:** ISTQB Certified | AWS Certified

 **Experience:** 17+ Years

Professional Summary

- **17+ years of experience** in Software Performance Testing and Functional Testing across **Banking, Capital Markets, and Healthcare** domains.
- **Certified AWS Solutions Architect (Associate)** and **ISTQB Foundation Level**.
- Expertise in **Performance Testing, Load Testing, Capacity Planning, and Performance Tuning** using tools like **LoadRunner, NeoLoad, and JMeter**.
- Skilled in working with a variety of protocols, including **Web (HTTP/HTML), Web Services (SOAP/REST APIs), Mobile, and Java**.
- Extensive experience in **LoadRunner** script development, with hands-on knowledge in **converting LoadRunner scripts to NeoLoad** projects.
- Proven expertise in **MuleSoft API testing** and **Salesforce performance testing**.
- Strong experience in **workload modeling** by analyzing production logs, usage patterns, peak volumes, and growth projections.
- Hands-on experience in performance bottleneck identification and **root cause analysis** using tools like **Dynatrace, AppDynamics, Splunk, and Wily**.
- In-depth knowledge of preparing and executing various performance test scenarios, such as **Load, Stress, Memory Leak, Stability, Volume, Capacity Planning, and Rendezvous** tests.
- Proficient in **defect tracking tools** like **HP QC, JIRA, TFS, and Clear Quest**.
- Leadership experience in **managing performance testing teams** and coordinating project activities, including **project planning** and **effort estimation**.
- Strong experience working in **Agile** and **Waterfall** methodologies.
- Rich hands-on experience in **mobile app performance testing** using **REST API calls** and **SOAPUI/Postman**.
- Expertise in **batch job execution** using tools like **UC4 Scheduler** and **AUTOSYS**.
- Comprehensive experience in performance testing of **IBM Curam** and other enterprise systems.

Education & Certifications

- Bachelor's degree in Science (Electronics & Computer Science) from Sri Krishnadevaraya University, Anantapur (AP/ India) in 2007
- Post-Graduation Diploma in Business Administration (PGDBA) from Symbiosis Centre for Distance Learning (SCDL), Pune in 2011
- AWS Certified Solutions Architect-Associate ([Credly](#))
- ISTQB / ASTQB Foundation Level Certified Tester
- SCRUM Fundamentals Certified professional

Technical Skills Overview

Performance Engineering

- Tools: LoadRunner, NeoLoad, JMeter, SilkPerformer, Microsoft VSTS
- Protocols: Web, Web Services, Mobile, Java, AJAX, TrueClient, Web Click & Script
- Utilities: PuTTY, WinSCP, vmstat, nmon, Perfmon

Monitoring & Observability

- Application Monitoring: Dynatrace, Splunk, AppDynamics, Wily Introscope
- Cloud & Infra Monitoring: AWS CloudWatch, Datadog
- Real User Monitoring (RUM): Dynatrace RUM, Salesforce Monitoring

API & Web Services Testing

- Tools: SOAP UI, Postman, API Performance Testing
- Protocols: REST, SOAP, XML/WSDL

Defect Management & Test Lifecycle

- Test Management Tools: HP ALM/Quality Center, Microsoft TFS
- Defect Tracking: JIRA, Rational ClearQuest

Development & Automation

- Languages & Formats: JavaScript, Python, C, C++, HTML, VBA, YAML, JSON, XML/WSDL
- DevOps & CI/CD: GitHub, Microsoft TFS, AWS CloudFormation, Ansible

Database & Backend

- Databases: Oracle, SQL Server
- Query Languages: SQL, PL/SQL

Cloud & Platforms

- Cloud Services: AWS Cloud
- CRM & Cloud Platforms: Salesforce

Diagnostics & Debugging

- Traffic Analysis Tools: HTTPWatch, Fiddler
- API & Client-Side Analysis: API Performance Testing

Content & Collaboration

- Tools: Microsoft SharePoint, Tricentis Confluence

Development Methodologies

- Agile, Waterfall

Domain Expertise

- Banking, Credit Cards, Stock Trading, Healthcare & Government Social Benefits

COTS Products

- IBM Curam

Project Profile

State of North Carolina (NCFAST)

Senior Performance Engineer

Durham, NC

Apr 2017 – Present

Child Welfare Services (IBM Curam): Contributed to the **NC FAST** program, which aims to improve child welfare services by reducing paperwork and automating county processes in a statewide repository. The platform facilitates better collaboration among **county DSS caseworkers**, social workers, and service providers, improving the delivery of services to the state's vulnerable populations.

PathNC(Salesforce): Worked briefly on the **PATH NC** project as part of the modernization of the **NC FAST** platform. The project focused on leveraging **Salesforce** to enhance child welfare services, automate case management processes, and improve collaboration between social services and families.

Roles & Responsibilities:

General Responsibilities:

- **Collaboration & Requirement Analysis:**
 - Coordinated with Development, Architect, and Business Teams to understand both functional and non-functional requirements, ensuring clarity on project enhancements and implementations across all project phases/releases.
- **Test Planning & Execution:**
 - Created detailed Performance Test Plans, Test Cases, Capacity Planning Models, Test Scenarios, Test Scripts, and Test Data for both Functional and Performance Testing.
 - Led Performance Testing and Mobile API Testing using tools like LoadRunner and REST API calls.
 - Conducted Load, Volume, Stress, Endurance, and Capacity Testing using Micro Focus LoadRunner and related tools to ensure application scalability and performance under various conditions.
- **Technical Architecture & Design:**
 - Participated in architecture and design discussions to define the most suitable solution model, factoring in performance, availability, failover mechanisms, and disaster recovery plans.
- **Performance Test Execution & Monitoring:**
 - Executed Performance Testing using Performance Center, evaluating key metrics such as Response Time, Hits Per Second, Number of Users, Transactions, and Throughput against SLAs.
 - Monitored application servers, web servers, middleware, and backend systems using Dynatrace, providing optimization recommendations for improved system performance.
- **Bottleneck Analysis & Optimization:**
 - Analyzed performance test results and identified potential bottlenecks. Provided tuning recommendations to the Development Team to address performance issues.
 - Led discussions with the respective application teams to explain encountered performance bottlenecks and offered targeted recommendations for resolution.

Project-Specific Responsibilities:

API Performance Testing (Salesforce & MuleSoft Integration)

- Led API performance testing for both Salesforce and MuleSoft, ensuring seamless integration, optimal performance, and scalability across the PATH NC modernization project and enterprise solutions.
- Conducted load testing and validated API performance under varying conditions, ensuring both Salesforce and MuleSoft APIs handled large data volumes efficiently and met response time standards.
- Collaborated with cross-functional teams to optimize Salesforce API performance for the NC FAST platform, ensuring high availability and reliability for child welfare services.
- For MuleSoft, validated the integration of internal systems with external APIs, providing performance feedback to improve API efficiency, throughput, and system scalability.
- Analyzed performance test results, identified bottlenecks, and recommended tuning solutions for both Salesforce and MuleSoft APIs to support growing business needs and traffic.

Mobile API Performance Testing (Mobile App Performance Testing)

- Led Mobile API Testing by executing performance tests for mobile applications using REST API calls and evaluating overall response times and app stability.
- Ensured that mobile APIs performed seamlessly under various load conditions, identifying any degradation and recommending fixes to improve app responsiveness and user experience.

Additional Technical Responsibilities:

- **Automation Testing:**
 - Worked on automation testing efforts to ensure both functional and performance automation scripts were implemented for regression testing, significantly reducing manual testing efforts and improving test coverage.
- **Reporting & Documentation:**
 - Generated **performance test reports** using **LoadRunner Analysis**, summarizing key findings, bottleneck resolutions, and recommendations for performance improvements.

CITI Group Inc

Performance Test Lead(Infosys Limited)

New Castle, DE

Nov 2016 – Apr 2017

GIMBA: GIMBA is replacement project of existing system with Oracle FlexCube. This is an end-to-end application development project involving requirements elaboration, design, build, testing, implementation and support.

Roles & Responsibilities:

- Developed Test Strategy and Plans for performance and scalability validation as part of the GIMBA project, focusing on the transition from the legacy system to Oracle FlexCube for the banking application.
- Test Script Development: Designed and implemented performance test scripts using LoadRunner and JMeter to simulate real-world banking transactions and validate the performance of the new Oracle FlexCube system under various load conditions.
- Test Execution: Executed various performance tests, including Baseline, Load, Stress, Spike, Volume, Capacity Planning, and batch jobs testing using HP Performance Center and JMeter.

- Protocol Expertise: Utilized Web and Java protocols to evaluate both front-end transaction processing and backend integration with Oracle FlexCube, ensuring system reliability and performance.
- Server and Application Monitoring: Monitored performance of TIBCO servers and backend systems using NMON and Wily Introscope, identifying potential bottlenecks and optimizing overall system throughput.
- Service Virtualization: Implemented Service Virtualization using LISA to simulate unavailable services and components, ensuring smooth testing during the transition to Oracle FlexCube.
- Batch Jobs and Database Performance: Managed execution of batch jobs using Autosys and generated AWR reports from ORAAS DB to assess database performance, optimize queries, and improve transaction efficiency.
- Bottleneck Identification and Optimization: Analyzed performance results, identified system bottlenecks in the application, network, and database layers, and recommended tuning actions to optimize overall system performance.
- Architecture Optimization: Worked closely with the development team to optimize system architecture for the production environment, focusing on scalability and capacity planning to ensure smooth operation post-implementation.
- Test Reporting: Prepared detailed performance test reports, documenting test results, findings, and recommendations for optimizing Oracle FlexCube system performance.
- Leadership and Coordination: Led a team of 3 testers in a distributed offshore-onshore model, ensuring effective communication and timely execution of all performance testing activities.
- SPOC for Performance Testing: Served as the SPOC for all performance testing activities, ensuring alignment with project objectives and delivering comprehensive testing support throughout the Oracle FlexCube implementation.

District Of Columbia, DHHS (DCAS)
Performance Test Lead(Infosys Limited)
Washington, DC
Aug 2015 – Oct 2016

District of Columbia Access System (DCAS): *The project involves, performance testing of the DCAS caseworker application(C`uram). This is modernization of ACEDs application. DCAS application enables web based platform for caseworkers & supervisors to issue state government sponsored social programs like Food Stamps, TANF (Cash Assistance), Power etc programs to eligible residents of District of Columbia.*

Roles & Responsibilities:

- Gathered requirements from business stakeholders and analyzed nonfunctional requirements to align performance testing with the goals of the DCAS application.
- Developed test scripts and scenarios using LoadRunner to simulate real-world workloads for the DCAS caseworker application.
- Executed performance tests using HP Controller, analyzed results using HP Analysis, and identified performance bottlenecks affecting application scalability and response times.
- Conducted a variety of tests, including load, stress, capacity planning, endurance/memory leak, volume, failover, and batch testing, to ensure system robustness under various conditions.
- Monitored application performance under peak load using Dynatrace, identified memory leaks, and analyzed system health through memory dumps for performance optimization.

- Worked closely with development, architecture, product, infrastructure, and business teams to identify performance bottlenecks and provided recommendations for resolution.
- Executed batch jobs using UC4 with production-level volumes and monitored for performance degradation or bottlenecks.
- Conducted failover tests by simulating application node and DB node failures to ensure system resilience and high availability.
- Executed Informatica workflows using Informatica PowerCenter, ensuring integration processes functioned smoothly and met performance benchmarks.
- Tracked performance-related defects and change requests using JIRA, ensuring timely issue resolution.
- Created custom dashboards in Dynatrace to analyze purePaths and system architecture performance, providing in-depth insights into application behavior.
- Prepared comprehensive performance test reports, including detailed analysis and recommendations for optimization to the development and infrastructure teams.
- Performed web protocol testing using LoadRunner and web service testing using SOAPUI to ensure seamless integration and performance across the system.
- Acted as the SPOC for performance testing activities, leading a team of 4 testers and coordinating efforts across multiple teams to ensure timely execution of tasks.

Charles Schwab & Co.Inc.,
Sr. Performance Engineer (Infosys Limited)
San Francisco, CA Mar 2014 – Jul 2015
Hyderabad, India Aug 2011 – Mar 2014

The project involves, performance testing of the advisor trading platform and traders/end users trading platform.

Roles & Responsibilities:

- Gathered requirements from business stakeholders and project development teams to align performance testing objectives with the goals of the Advisor Trading Platform.
- Developed test strategy documents and test plans for various project requests, ensuring comprehensive performance testing coverage.
- Prepared workload models for each project request by analyzing peak hour page views from Omniture, a third-party vendor monitoring production infrastructure.
- Implemented predictive modeling for major applications to assess potential risks and proactively address performance issues.
- Developed and validated test scripts using JMeter and LoadRunner, including release-based test data validation and creating various load test scenarios.
- Executed performance tests such as load, baseline, stability, stress, scalability, and volume tests using Performance Center or JMeter.
- Created custom dashboards in Dynatrace and AppDynamics for analyzing purePaths and system architecture performance, providing insights into application behavior and performance bottlenecks.
- Used Splunk dashboards to gather and analyze metrics, including query performance and web service performance.
- Worked with various protocols like Web (HTTP/HTML), Ajax TruClient, Web Click and Script, RDP, and RTE to validate performance across different use cases.
- Captured client-side metrics such as response time, rendering, cache, and latency using HTTPWatch and Fiddler to optimize client-side performance.

- Conducted performance testing for the migration of platform architecture from 32-bit physical servers to 64-bit virtual machines, ensuring efficient platform performance in the new infrastructure.
- Performed bottleneck analysis following the TCOE process:
 - First Level: Analyzed with LoadRunner Analysis and server utilization data.
 - Second Level: Provided layer/tier-wise response times and reviewed various metrics (CPU, memory, disk, CLR, process) from different monitoring tools, analyzing HTTP, IIS, and Web error logs.
 - Third Level: Conducted deep analysis using Dynatrace, AppDynamics, and Splunk in collaboration with development teams.
- Prepared comprehensive test reports (release-wise), presented findings to project teams, and implemented recommendations in subsequent releases to improve performance.

Led a team of 6 members, overseeing management activities such as estimations, productivity improvements, and quality assurance.

Wachovia Bank / Wells Fargo Bank
Performance Tester (Infosys Limited)
Hyderabad, India Feb 2008 – Jul 2011

Performance testing for Internet Banking applications involved extending and implementing Wachovia's current performance test suites to all its Real time Internet Applications.

Roles & Responsibilities:

- Performed end-to-end functional and performance testing for real-time internet banking applications as part of the extension and implementation of Wachovia's performance test suites.
- Analyzed functional and business requirement specifications to understand system behavior and define test objectives.
- Prepared detailed functional test cases and test scenarios covering core internet banking workflows.
- Executed functional test cases using HP Quality Center and ensured traceability against requirements.
- Logged defects, performed root cause analysis, and coordinated with development teams for resolution.
- Created test summary and test closure reports, documenting test outcomes and providing actionable insights.
- Developed and executed performance test scripts using HP LoadRunner, focusing on web and web services protocols.
- Conducted load, stress, and endurance testing to assess system behavior under different conditions.
- Analyzed performance results, identified bottlenecks, and compiled observations and recommendations into performance test reports.
