EXPERIENCE

Qualtrics — VA, US

System Engineer II (2022/4 to present)

- Improved deployment reliability by 25% by designing comprehensive system, performance, and backward compatibility tests for monthly releases, reducing rollbacks and hotfixes.
- Enhanced platform resilience and security by modifying platform code for compatibility with cloud-native Amazon EKS infrastructure, adhering to rigorous security and compliance standards, and reducing security vulnerabilities by 10% per release cycle.
- Achieved 99.99% database availability and cut operational costs by 50% by migrating and optimizing PostgreSQL on AWS RDS via Terraform and implement AWS native monitoring tools.
- Reduced manual toil by 20% through Python/Bash automation for log cleanup, backups, platform provision instances in new region, system health check, monitoring data processing and scaling tasks, executed via Jenkins/Kubernetes.
- Accelerated infrastructure scaling by 99% (2 days → 10 minutes) by leading migration of core Designer platform to AWS EKS, including Helm chart deployments, ingress management and infrastructure change.
- Minimized production downtime by 10% by leading a 24/7 offshore team to address production issues promptly and performing thorough root cause analyses (RCA) to prevent future occurrences.
- Proactively identified and resolved potential issues by building advanced monitoring solutions using Grafana, AWS CloudWatch, and Splunk, resulting in a 5% decrease in user-reported issues.
- Shortened deployment cycles by 15% via CI/CD pipelines (Jenkins/Ansible/Terraform), ensuring zero-configuration drift across EKS environments.

Clarabridge, Inc — VA, US

Senior Product Operations Engineer (2021/2 to 2022/4)

- Reduced incident resolution time by 12% by leading cross-functional Kanban team to triage and resolve 100+ high-severity production issues monthly.
- Eliminated Elasticsearch downtime by optimizing GC settings and complex queries, supporting a 10x data growth (GB → TB/year) without performance loss.
- Achieved 99.95% cluster uptime during Elasticsearch version upgrades and data migrations, ensuring data consistency with custom scripts.
- Cut containerization effort by 30% by collaborating with dev teams to migrate legacy Windows services to Docker on Linux.

Advanced Support Engineer (2018/2 to 2021/2)

- Reduced recurring incidents by 8% through log analysis (Splunk/ELK) to resolve JVM, caching, and network bottlenecks, maintaining 99.9% SLA compliance.
- Resolved 95% of P1 incidents within 2 hours during on-call rotations, minimizing client impact during peak traffic periods.

EDUCATION

Master of Science in Information Systems | GPA: 3.68 | Dec 2017

Bachelor of Science in Accounting & Information Systems | GPA: 3.67 | May 2016

Minor: Astronomy

SKILLS

Reliability: Incident Management, RCA, SLO/SLI Design, Chaos Engineering

Cloud & DevOps: AWS (EKS, RDS, CloudWatch), Terraform, Kubernetes, Helm, Jenkins, Ansible

Monitoring: Grafana, Splunk, ELK, Prometheus

Languages: Python, Bash, SQL

Databases: PostgreSQL, Elasticsearch (Performance Tuning, Sharding)
