1145 Aragon Trail Mesquite TX, 75149

Professional Summary

A Professional Oracle Database Developer with an extensive knowledge and proficiency in database development and analysis; object-oriented programming and business-oriented programming. Enthusiastic professional with excellent critical thinking, project management, problem solving and communication skills.

Technical Skills Summary

Databases: Oracle 11g, 12c & 19c, Microsoft Access.

Languages: PL/SQL, SQL, Shell Scripting, Java, C#, Python, MATLAB, HTML, CSS, Visual Basic, Informatica Power center, Informatica IICS

Software: GitHub, Microsoft Word, Access, Excel, Outlook, Visio, Jira, Apex

Operating Systems: Linux, UNIX, Microsoft Windows.

Cloud: Azure, Snowflake

Oracle ETL Developer

Victoria Technologies, Dallas, TX

Jul 2021 – Present

- Authored over 20,000 lines of PL/SQL, including complex functions, procedures, triggers, and custom data types to support critical application logic.
- Performed comprehensive unit testing, diagnostics, and debugging across multiple phases of the software development lifecycle.
- Resolved support tickets involving advanced data manipulation tasks—such as bulk updates, inserts, and deletes—bypassing application-level constraints.
- Contributed to database schema design and evolution, identifying and implementing changes to accommodate new datasets and business processes.
- Provided helpdesk support, including troubleshooting data issues, resolving user-reported incidents, and escalating defects as needed.
- Participated in Production Support (including on-call rotation), monitoring and maintaining scheduled jobs on both Oracle databases and Unix servers.
- Developed ETL processes using Informatica, including truncate loads, incremental loads, and complex workflow designs for efficient data integration.
- Designed and scheduled complex Oracle procedures and functions using DBMS_SCHEDULER for automated daily reporting.
- Enhanced performance of existing PL/SQL scripts, procedures, and ETL pipelines through code optimization and efficient data handling.
- Recently expanded skill set to include Snowflake and Azure Data Services, working with cloud-based data warehousing, data ingestion pipelines, and performance tuning on Azure SQL, Azure Data Factory, and Snowflake.

Oracle Database Developer**Nov 2019 – Jul 2021****SchoolsPLP , Phoenix, Arizona**

- Wrote PL/SQL codes and bash shell scripts in UNIX to generate trouble tickets when an alert is generated from the database and monitored by the Oracle Enterprise Manager (OEM).
- Used excellent PL/SQL skills to create files and perform bash shell scripting for automation within the database.
- Collected More detailed information about Oracle database alerts using PL/SQL codes embedded in scripts.
- Worked to enhance optimal performance through database tuning.
- Developed ER diagrams, schemas, logical to physical database mapping and data table parameters
- Designed and implemented data definition language (DDL) and data manipulation language (DML) using SQL within PL/SQL stored program units (Procedures, Functions, Packages, Triggers).
- Wrote pseudo codes, flow diagrams for easy interpretation and implementation by Junior Developers.
- Setup Incident rules and corrective actions on Oracle database objects.
- Administered database objects, including tables, clusters, indexes, views, sequences, packages, and procedures.

Oracle PL/SQL Developer**Feb 2017 – Oct 2019****FNB Bank, Windhoek, Namibia**

- Tuned jobs/procedures/scripts, SQL queries, PL/SQL procedures to improve the system performance.
- Created primary objects (tables, views, indexes, synonyms, procedures, functions, and triggers) to help application developers with the application design.
- Led PL/SQL development, and coordinated the automation and deployment of all Oracle migrations for the Online Customer Service site.
- Involved in debugging for root cause and tuning the PL/SQL code, tuning queries, optimization for the Oracle database.
- Used Cursors both implicit and explicit to capture many rows within a PL/SQL block and applied business rules on them.
- Create and enhance PL/SQL stored procedures, functions, trigger, indexes, views, materialized views, etc.
- Developed complex SQL and PL/SQL queries required to retrieve data from data repository using cursors, joins and subqueries.

Oracle SQL Analyst
NEDBANK, Windhoek, Namibia

Jan 2016 – Feb 2017

- Assessed database performance to include I/O contention, fragmentation, Table and Index statistics and usage
- Developed and provided support to all system interfaces and coordinated with all project managers to provide specifications for all core modules.
- Coordinated with various developers, project managers and analyst to prepare designs for new applications and documents all processes to ensure effective evaluation of all applications.
- Analyzed and ensured efficient transition of all technical design documents and developed various PL/SQL packages, Procedures, and functions to provide support to all application developers.
- Monitored, developed, and recommended changes if required to all PL/ SQL packages and provided stored procedures and design and develop various relational database.
- Evaluated all architecture for Oracle applications and prepare layouts for all logical models and maintain database objects for various application components.
- Designed and implemented various structures for all physical objects and recommended changes on applications through efficient statistical structures.
- Monitor and identify specific programming languages and recommend enhancement to all programs and evaluate all software resolution.
- Collaborated with various departments and perform research on all data processing functions.

EDUCATION

Bachelor of Science, Information Systems

Sept 2015

University of Namibia, Windhoek, Namibia

GPA: 3.6/4.00
