

DAVID A. THOMAS

Edwardsville, IL | 815-931-8620 | davialan7@gmail.com | <https://www.linkedin.com/in/david-thomas-43b447102/>

PROFESSIONAL SUMMARY

Dedicated, performance-driven professional with 9+ years of experience in Geographic Information Systems (GIS). Extensive experience with GIS and Geospatial projects ranging from the National Geospatial Intelligence Agency (NGA) to large public companies and local municipalities. Successfully executed on all facets of the project process including Training, Production, Quality Control and Finishing. Ability to execute projects and develop and present the information to meet the needs of various audiences. Highly motivated individual who thrives on learning new concepts. Seen as the go-to person to identify new ways to use tools and implement workflows to improve speed without sacrificing quality. For several projects, held the Quality Control position which required providing tough feedback to other analysts and working with them to help understand ways to improve their work.

CORE COMPETENCIES

Geographic Information Systems (GIS) | Command Line and Unix Terminal experience | Computer Systems Configuration | Remote Sensing | Imagery retrieval | Photoshop | GIMP | Software setup | Creating and modifying RBJ's | Wildcat Conflation Software | GAIT | Property Research | ROW Research | Python | Agisoft Metashape | Cedalion | Orchestration Services | Remoteview | IEC | Open Street Maps | Land Use Data Research | DVOF | Team Collaboration | Artificial-Intelligence (AI) Training | Raster Datasets | Aeronautical Charts | Microsoft Word | Microsoft Powerpoint | SharePoint

CLEARANCE STATUS

Active TS/SCI + CI Polygraph

PROFESSIONAL EXPERIENCE

NATIONAL GEOSPATIAL INTELLIGENCE AGENCY – Scott Air Force Base, IL

Jun 2023 – Present

Geospatial Analyst

- Create remarks and formal foundational military intelligence GEOINT products, including facility baselines and GNs.
- Utilize RemoteView, Orchestration Services or Cedalion, IEC, ArcGIS Pro to complete everyday tasks.
- Communicate effectively with multiple agencies in a time dominant setting.
- Create multi-product adhoc maps for time sensitive missions involving US Transportation Command (USTRANSCOM).
- Constantly update the Commercial Port Foundation Database with extracted ports of interest.
- Maintain tracking of Ports of Interest on Microsoft Excel.
- Search, acquire and analyze imagery for production.
- Chip imagery to be used for products and intelligence.
- Familiarity with NTM sensors and capabilities, including EO, SAR, IR, and MSI.
- Train Artificial-Intelligence (AI) Models for imagery-based detections.

BAYER - St. Louis, MO

Mar 2021 – Jun 2023

Geospatial Engineer – Imagery Specialist

- Utilize QGIS to process orthographic imagery.
- Measure and align plots based on drone imagery and planting seasons.
- QAQC plots and imagery to make sure it aligns with customer's needs.
- Problem solve basic Python and SQL scripts.
- Stitch and edit aerial imagery using Agisoft Metashape.
- Manage and edit Sentra 6x imagery.
- Maintain weekly logs of user's space utilization and optimization of their Virtual Machine

T-KARTOR USA - St. Louis, MO

Jul 2020 – Mar 2021

Geospatial Analyst II

- Utilized Arcmap to identify and measure Vertical Obstructions, such as power pylons and telecom poles, while following detailed spatial requirements.
- Strategize new workflows to improve speed and accuracy.
- Use satellite imagery to identify and record specific structures in various parts of the world.
- Utilize ArcMap to complete geospatial analysis with various project specifications in mind.

- Work collaboratively with QC and production teams while continuously updating excel spreadsheets to keep records of progress within the project.
- Manage Geospatial Databases using ArcCatalog.

Subcontract with Maxar Technologies

- Use Erdas Imagine to refine landcover, urban and hydro features in specific AOIs for the VISNAV Landcover project.
- Joined the Quality Control team to locate and identify discrepancies and attribute errors within work areas while reporting to the production team to have the necessary updates made.
- Utilized proprietary programs to locate, update and collect urban developments, hydrology features and landcover.

VERTICAL GEOSOLUTIONS, INC. - O'fallon, IL

Aug 2018 – Jul 2020

Geospatial Analyst

- Completed research, statistical analysis and spatial thinking using geospatial information systems (GIS) to make sure projects were completed on time and with accurate information to the region that was applicable.
- While following distinctive spatial requirements, used Arcmap to locate and measure Vertical Obstructions such as power pylons and telecom poles.
- Tasked to research and report specific areas of our projects and present my findings to the team to better the knowledge of the analyst producing the data.
- Perform Quality Control with regard to data capture, data conversion and data evaluation and to detect discrepancies and attribute errors within work areas and report back to the production team on common errors.
- Update and maintain geodatabases to keep production flowing.
- Strategize new workflows using structured data to improve speed, accuracy and solve intelligence issues.
- Created RBJ's to catch geometry and attribute errors such as undersized polygons or incorrect vegetation types within a geodatabase while continuously updating specifications depending on project.
- Familiarity with technical skills, such as scripting and coding, programming, data mining and analytics, data visualization, statistical analysis, algorithm development, data science, or computational thinking.
- Utilize Python to create scripts to increase speed and accuracy of projects.
- Discover trends such as urban expansion or new transportation routes, and produce finished intelligence based on these trends.
- Use GAIT to find and correct spatial errors within shapefiles.
- Utilize SOCET GXP to view and manage Remote Sensing Data.
- Utilize ArcMap to create and update Aeronautical Charts.
- Experience using critical thinking skills such as photo interpolation and/or data analytics to address matters of national concern.
- Train and assist staff under strict requirements.

Subcontract with Leidos

- Hydro and transportation collection based on satellite imagery and information points for the JANUS Data Conditioning project.
- Utilized proprietary programs to locate, update and collect urban developments.

OPTIMAL GEO, INC. - St. Louis, MO

May 2017 – Jul 2018

Geospatial Analyst

- Completed Content Management assignments using Wildcat conflation software to optimize the data provided and create newer, better data outputs.
- Use geographic information systems (GIS) like Arcmap to analyze and research data to complete AOI's in a timely manner while maintaining a standard of data quality.
- Locate and measure vertical obstacles in accordance with detailed space requirements.
- Followed specific guidelines and used Self QC methods to improve workflow and data quality in areas of interest.
- Work in an SDE environment while actively avoiding conflicts in data with coworkers.
- Solving any conflicts in the SDE while keeping data integrity as the highest priority.

SPATIAL DATA INTEGRATIONS, INC. - St. Louis, MO**Jun 2016 – May 2017*****Geospatial Analyst***

- Used ArcMap and other GIS programs to complete MGCP assignments which encompassed many factors such as land cover, transportation and hydrology in a time sensitive manner while still maintaining a high level of accuracy.
- Perceive and measure Vertical Obstructions which included buildings, poles and power networks while following exact spatial requirements.
- Utilize DEM Raster images for hydrographic feature collection.
- Completed Content Management assignments using Wildcat conflation software to optimize the data provided and create newer, better data outputs.
- Use GAIT to find and correct spatial errors within shapefiles.
- Create GAIT project files for others to use to check the quality of their work.

MOBILITIE, LLC - Chicago, IL**Dec 2015 – May 2016*****GIS Specialist***

- Used Google Earth to locate and identify locations to put up a telecommunication tower.
- Research local, county, and state governments to confirm that a tower can be placed in the desired location.
- Note locations of utility connection points.
- Use property lookup software to locate Public Right-of-Ways for tower locations.
- Utilized the FAA database to confirm towers can be placed at needed heights near airport runways.
- Contact and confirm with construction managers that the tower can be physically built-in desired location without the need for extra equipment.
- Shift work in the NOC to solve real time Geospatial problems with crews on site while working collaboratively with others to ensure data integrity.

LICENSES & CERTIFICATION

TS/SCI + CI Polygraph

Certificate of Achievement for Innovation regarding Arcmap and its built-in tools from Vertical GeoSolutions

Battle Damage Assessment (BDA) Certification

EDUCATION

Bachelor of Science, Geography; Minor in Climatology and Meteorology | Southern Illinois University Edwardsville – Edwardsville, IL
