

Deepak Asani

Sr. Azure DevOps Engineer

EDUCATION

Bachelor of Mechanical Engineering
| Aug 1994 - Jul 1999

**Karnataka University, Dharwar, UP,
India**

TRAINING/CERTIFICATIONS

Windows Powershell, CMMI

TECHNICAL SKILLS

Web/EAP: IIS/ Oracle WebLogic/
Apache Tomcat/ Httpd server/Red
Hat/ JBoss/ Nginx
Cloud

Computing: Azure/ AWS

Code

Management System: Azure Repo/
Git/ SVN

Build: Maven/ Ant/

Gradle/ MS Build/ CMake/ Make/
NMake

Continuous Integration:

Azure DevOps/ Jenkins

Code

Quality: SonarQube/ NUnit/
JUnit / PMD/

Function Testing/
Integration Testing/ System
Testing

Repository:

Nexus/

Artifactory/ Shakudo

Continuous

Deployment: Jenkins/Azure

Pipelines/

UrbanCode Deploy

Containerization:

Docker
(Dockerization, Docker
Compose, Kubernetes, AWS
Fargate etc.)

Infrastructure

Provisioning: Terraform, ARM
Templates

Operating Systems:

Unix, Linux (Red Hat
Enterprise), Windows, Mac

Testing and Quality Assurance:

Test Plan/ Test Cases/ Test
Data Management/ Test
execution

Testing Tools:

Nunit/ Xunit/ MSTest/ Gtest/
Azure DevOps Test
Management/ Automation Scripts/
Quality

Center/ Selenium/

Scripting: Python / PowerShell

- Results- driven DevOps expert with a proven track record of designing and implementing scalable, reliable, and secure Continuous Integration/ Continuous Deployment (CI/CD) solutions.
- Skilled in leveraging both on- premises and cloud platforms (AWS, Azure, GCP) to enhance performance and cost efficiency.
- Proficient in utilizing automation tools and Infrastructure as Code (IaC) to streamline processes and improve operational efficiency.
- Known for exceptional collaboration skills and adaptability in fast- paced environments, consistently delivering top-notch outcomes.
- Trusted problem solver with extensive knowledge of cloud architecture, DevOps practices, and security protocols

CORE COMPETENCIES

- Proficiency in CI/ CD pipeline development using tools like Jenkins, Azure DevOps (ADO), and UrbanCode Deploy (UCD) is critical for automating software delivery processes.
- Expertise in Infrastructure as Code (IaC) technologies such as Terraform, Chef, and Puppet enables efficient provisioning and management of infrastructure.
- Additionally, cloud computing skills in platforms like AWS and Azure, combined with Terraform for cloud resource automation, are vital for building scalable and flexible environments.
- Containerization is another key area, requiring knowledge of Docker for creating lightweight containers and Kubernetes for orchestration, scaling, and managing containerized applications.
- Complementing this is proficiency in version control systems like GitHub, Azure DevOps Git, and SVN to manage codebases effectively.
- Strong scripting abilities in Python, Bash, and PowerShell further support automation and system administration tasks.
- Adopting Agile methodologies like Scrum and Kanban ensures streamlined workflows and iterative development.
- Effective cross- functional team collaboration, coupled with mentoring and training capabilities, fosters a productive team environment.
- Skills in system migration and optimization are essential for modernizing legacy systems while maintaining performance.
- Soft skills such as problem-solving, critical thinking, time management, and strong communication abilities are indispensable for addressing challenges efficiently.
- Reporting expertise using tools like ServiceNow Reports, Splunk, and SSIS aids in monitoring and analytics.
- Knowledge of quality assurance practices, including test planning, execution, automation, and defect management with Jira or Azure DevOps, ensures software reliability. In security- focused roles, familiarity with vulnerability management tools like AQUA, Kenna, and Snyk is crucial for safeguarding systems.
- Supporting internal and external audits (e.g., OCC, FRB, SOX compliance) demonstrates governance capabilities. Lastly, documentation skills using platforms like Confluence or Azure DevOps wiki pages ensure knowledge sharing across teams.

EMPLOYMENT HISTORY

MLOPs Automation Lead / Enterprise DevOps Team Lead | Oct 2024 - Feb 2025
Huntington National Bank, Columbus, OH

Responsibilities:

- Deployed over 120 machine learning (ML) models across 5 distinct business units using AWS SageMaker pipelines, collaborating with the offshore team to ensure consistent, repeatable, and scalable model deployment processes. This involved setting up SageMaker training jobs, model deployments, and endpoint configurations to ensure models were ready for production.

Monitoring

tool: Dynatrace/ Prometheus/
CAAdvisor/ Heapster

Log: Splunk/
elk (Kibana)/ Grafana/
ServiceNow

DataBases: MSSQL/
Oracle/ Mongo/ DB2 Change
Management, Release Management:
ServiceNow/ Jira/ Azure
DevOps.

Defect Tracking

Systems: JIRA/ PVCS/ TeamTrack/
TestTrack/ Bugzilla/
ProjectByNet/ UltraApps Issue
Manager

Reporting/ Dashboard

Tools: ServiceNow/ Azure DevOps
Wiki & Dashboards/
Confluence/ Splunk

AWS Lambda for serverless compute functions, and AWS Glue Jobs for ETL (extract, transform, load) processing. This resulted in an automated pipeline that streamlined data processing, model training, and real-time monitoring.

- Designed and established robust code repositories using AWS CodeCommit for version control, enabling efficient code collaboration and integration. Implemented AWS CodePipeline to automate the CI/ CD pipeline, ensuring continuous integration, testing, and deployment of ML models with minimal manual intervention.
- Developed and maintained infrastructure as code (IaC) using Terraform and Azure DevOps (ADO) pipelines for provisioning, managing, and scaling AWS resources, including EC2 instances, S3 buckets, and SageMaker endpoints. This automation enabled more reliable, consistent, and rapid deployments across AWS, aligning infrastructure with application requirements and business needs.
- As a product owner, created a requirements gathering template using Microsoft Forms to streamline the collection of product requirements. This approach improved collaboration, enhanced clarity in defining user stories, and increased efficiency in capturing and prioritizing stakeholder needs.

Environment: MS Build, Git, PowerShell Scripts, Shell, SonarQube, Azure DevOps, Windows, IIS, Python, NodeJS/ ReactJS, AWS, SageMaker, Step Functions, Glue Jobs, AWS Lambda, AWS S3, AWS SNS, Kafka, Event Hub, Event Query, API Swagger, Application Gateway, Azure API Management (APIM), Nexus, Terraform .Net Framework 4.5/Core, jQuery, JSON, MS SQL, Oracle, Postgres, Azure SQL, Azure DevOps Pipelines, AWS Cloud Watch Monitoring

Enterprise DevOps Engineer/ Enterprise DevOps Lead Engineer/ Enterprise DevOps Team Lead | Aug 2017 - Oct 2024
Huntington National Bank | Columbus, OH

Responsibilities:

- Developed and maintained CI/ CD pipelines using Jenkins, Azure DevOps (ADO), UrbanCode Deploy (UCD), and Terraform, incorporating secure coding practices, vulnerability scanning, and automated security testing at every stage of the pipeline. Integrated Snyk for dependency and container vulnerability scanning,
- SonarQube for continuous code quality and security analysis, and Aqua Security for container security and runtime protection.
- Implemented role-based access control (RBAC) and secrets management to ensure the safe handling of sensitive data.
- Deployment logs were securely delivered to the enterprise Splunk for monitoring and auditing, ensuring traceability and compliance with security standards and regulations.
- Automating database installations, restores, and DDL/ DML execution using MS PowerShell, Jenkins, and IBM UrbanCode Deploy (UCD) saved \$680K annually by eliminating manual errors, reducing deployment time, and enabling self-service capabilities. The process involved scripting database operations with PowerShell, integrating Jenkins for CI/ CD pipeline automation, and orchestrating deployments via UCD with security gates and parallel execution.
- Changes were source-controlled, validated through automated builds, and deployed seamlessly across environments. This automation reduced deployment time from days to hours, minimized risks with rollback capabilities, and scaled to hundreds of servers, delivering faster turnaround and enterprise-grade efficiency.
- Migrating 24 organizations from TFS to Azure DevOps Server and then to Azure DevOps Services without third-party tools saved \$260K and involved a meticulous technical process. The migration started with upgrading TFS instances to the latest Azure DevOps Server version, optimizing SQL databases, and integrating Azure Active Directory for seamless authentication. A dry-run migration was conducted using Microsoft's Azure DevOps Migration Tool to validate data integrity, resolve schema conflicts, and address unsupported customizations. The live migration followed an incremental approach, transferring inactive data first and scheduling downtime for active work items, repositories, and pipelines during the final cutover. Key challenges included managing large datasets, recreating custom process templates, optimizing database size, and reconfiguring complex pipelines. The migration streamlined workflows, enabled cloud-native capabilities like hosted build agents and scalable pipelines, and modernized development processes while maintaining cost efficiency and high data fidelity.

deployment and optimal performance across both platforms.

- Developed self-service/ No-Ops deployment frameworks using UrbanCode Deploy & Jenkins, decreasing manual workload by 45%.
- Successfully planned and executed monthly releases for 140+ applications without issues by monitoring the status using ServiceNow reports and dashboard.
- Administered and maintained DevOps enterprise tools (Azure DevOps Server, Jenkins, SonarQube, Nexus Artifactory, UrbanCode Deploy), ensuring 99.9% uptime. Performed disaster recovery processes for all the tools with validation documents.
- Implementation of Docker & Kubernetes for containerizing a few applications, reducing deployment times, and improving portability across different environments.
- Transitioned most of the DevOps activities to offshore by saving \$240K per year.
- Led a 12- member DevOps team and accomplished improvements in onboarding applications, BAU, production support, monthly enterprise releases, automation around mundane tasks, and documentation.
- Assisted and delivered evidence for internal & external audits. Proficiency in delivering MRA & MRIA tasks in time or ahead of time.

Environment: MS Build, Make, Git, PowerShell Scripts, Shell, Azure DevOps, Windows, Linux, Mac mini, IIS, Python, C/ C++, Java, AWS compute, Kubernetes, AKS, ACR, Azure DevOps, Azure AD, Nexus, Terraform, Net Framework 4.5/ Core, ASP.NET, WCF, WWF, REST, SOAP, Remoting, Visual Studio, Visual Studio Code, jQuery, JSON, MS SQL, Oracle, Postgres, Azure SQL, Oracle, Mongo, UrbanCode Deploy, Jenkins, ServiceNow, Confluence, Splunk, Prometheus, Grafana, Helm Charts, Nexus, Artifactory, SonarQube, NexusIQ, SailPoint, CyberArc,

DevOps Engineer/ DevOps Architect | Jan 2015 - Aug 2017 Huntington National Bank, Columbus, OH

Responsibilities:

- Document the automation for complex deployment requirements for the Mortgage platform.
- Designed and developed automated platform builds and application deployments using Windows PowerShell, Jenkins, and UrbanCode Deploy, saving 84% of manual time and enabling faster market release.
- Collection applications build and deployment automation using Jenkins, XLDploy, and Urban Code Deploy tools by saving \$90K used in support per year.
- The above initiatives led to organization- wide recognition for the Digital DevOps team, marking the beginning of the Enterprise DevOps Era. Additionally,
- Was awarded Best Technical Contractor, and this success enabled the start of Virtusa offshore for the DevOps team.
- Implementing useful DevOps utilities using PowerShell and hosted into Jenkins saved manual efforts by 20%.
- Lead the Complex Migration of TFS 2010 to TFS 2015 Update1/Update3. Maintaining & administering TFS without issues.
- Planned and coordinated weekly status meetings with offshore/ onsite team members and business users on DevOps activities, reporting the same to top management and stakeholders.

Environment: MS Build, Make, Git, PowerShell Scripts, Shell, Azure DevOps, Windows, Linux, Mac mini, IIS, Python, C/ C++, Java,, Nexus, Terraform, Net Framework 4.5/ Core, ASP.NET, WCF, WWF, REST, SOAP, Remoting, Visual Studio, Visual Studio Code, jQuery, JSON, MS SQL, Oracle, Postgres, Azure SQL, Oracle, Mongo, UrbanCode Deploy, Jenkins, ServiceNow, Confluence, Splunk, Prometheus, Grafana, Helm Charts, Nexus, Artifactory, SonarQube, SailPoint, CyberArc

Software Configuration Specialist | CI/CD Specialist | QA Expert | Apr 2009 - Dec 2014

Synechron USA | INDIA and USA

Following are the Projects:

Continuous Integration/ Delivery Specialist

Project 1: Platform as a Service Initiative projects (PaaS projects)

Description: As part of Continuous Delivery efforts. Platform as a Service team is

capabilities. This is all about increasing speed to market and agility of IT.

Responsibilities:

- Analysis and collection of the information on existing software configuration management and deployment processes. Identify the gaps/ deviations in the processes and recommend solutions address the same.
- Document the automation requirements for build, release, deployment processes and recommended the solutions to implement the automation requirements.
- Implement continuous integration and delivery pipelines for pilot projects using the automation requirements. On- board/ coach the development/ sqa teams on continuous integration and delivery software practices.
- Implemented the various continuous integration and delivery pipelines using Jenkins continuous integration server software and industry standard scripting languages (TIBAnt, PowerShell, Ant, Groovy scripts) for TIBCO, .NET and Java projects.
- Define policies, standards, guidelines, governance and related guidance for both CI/ CD operations for organization.
- Analyze and recommend CI/ CD tools like Repository Managers for build artifacts (Sonar Nexus & Artifactory), Unit testing tools (NUnit, JUnit, Jasmine) etc.
- Responsible for set- up, scale and maintain the Jenkins Continuous Integration Server infrastructure.
- Manage and guide teams in maintaining day to day TFS and SVN tasks.
- Also led the migration of source code from TFS to SVN.
- Planned and Coordinated weekly status meetings with offshore/onsite team members and business users on Jenkins efforts and reporting the same to the top management and stakeholders.
- Leading the performance engineering efforts for applications and providing analysis, implementation and implementation reports.

Environment: JIRA, .NET 4.5, IIS 7.0, Visual Studio 2008/ 2010/ 2012, Team Build 2010, Windows 2008 Server/ VMs, Windows PowerShell scripting, TIBAnt, Ant Scripts, Groovy scripting, Jenkins CI Server

Build and Release Expert
Project 2: 7-eleven

Description: 7-eleven website is built for 7-eleven stores.

Responsibilities:

- Fixed the immediate build and deployment related issues
- Stabilized the build process to obtain the required output and accurate deployment package
- Streamlined the branching and merging and migrated source code from SVN to TFS. Conducted a training session for team members for TFS usage.
- Engaged in build and deployment process automation using TFS 2012 Builds and Windows batch/ PowerShell files

Environment: JIRA, .NET 4.5, IIS 7.0, Visual Studio 2012, Team Build 2012, MS SQL Server 2008, Windows 2008 Server/ VMs, Windows PowerShell

Lead Build and Release Engineer
Project 3: Ramp Product

Description: Ramp is build for large retail customer based businesses to support managing their Marketing projects. It is next generation version of existing RMT, which used heavy investment for bringing new client to the platform. Ramp is built on top of latest Microsoft Technologies including ASP.NET MVC 3 Razor Engine, Entity Framework 4.0 with Model first approach, NServiceBus for distributed architecture, Silverlight, Windows Communication Foundation, and Workflow Foundation.

Responsibilities:

- Fixed the immediate build and deployment related issues
- Stabilized the build process to obtain the required output and accurate deployment packages
- Involved in umbrella configuration management plan for Ramp clients and execution of configuration management plan. Extensively worked on restructuring the branching model. Re-defined the merging strategies.
- Prepared Ramp client's monthly build and deployment plans, and sent to required stakeholders

replace the costly RepIWeb deployment tool.

- Single-handedly gathered and documented automation requirements, designed, and implemented the solution using modular PowerShell scripts.
- Migrated the source code from SVN to TFS without the history for some of the projects.
- Building and deploying process automation using TFS 2010 Builds and Windows PowerShell Scripts
- Responsible for generating and maintaining the release notes using JIRA and TFS 2010
- Setting up Continuous Integration (CI) using TFS 2010 and Windows PowerShell Scripts that included Daily AM/ PM builds for all clients and deployment to development test environment
- Involved in one of the challenging task accomplished to retrieve the lost source code from the old dynamic libraries using Disassembler Tools (Reflector) and added to the source code repository in TFS to resolve major production issues
- Engaged in Ramp Windows Services management using PowerShell UI, as part of this user can install/ un-install, start/ stop, query services by connecting to Windows server, database, and service account (optional)
- Set up and maintained development test environment
- Involved in TFS 2010 migration from one server to another server, and set up the TFS, projects collection, and build process

Environment: JIRA, .NET 3.5/ 4.0, IIS 7.0, Visual Studio 2008/ 2010, Team Build 2008/ 2010, MS SQL Server 2008, Windows 2008 Server/ VMs, Windows PowerShell, CCNet, FxCop, NUnit, Sandcastle

Build and Release Engineer

Project 4: e2 Policy Administration System

Description: The E2 Policy Administration System is a web application, which is designed and built using Microsoft .NET development platform. All processes are defined using Microsoft recommended tools and techniques.

Responsibilities:

- Involved in configuration management plan, and execution of configuration management plan
- Engaged in weekly builds of e2 modules, deployment, and promotion to different e2 environments
- Built and deployed process automation using MSBuild and NAnt scripts
- Responsible generating and maintaining the release notes
- Setup the Continuous Integration (CI) using CCNet and MSBuild scripts and daily AM/ PM builds, the CI process involves obtaining latest source code from TFS, label the code, build the code, run code compliance metrics (FxCop), unit tests (NUnit), code metrics (NDepend), source documentation (Sandcastle), Smoke testing (Automated QA), and persist all metrics data in to the SQL Server
- Engaged in daily automated update of custom build dashboard for FxCop, NUnit, and code metrics issues
- Set up deployment servers for all e2 environments such as Development, QA, UAT, Integration UAT, and Production, and maintained these environments
- Planned and Coordinated weekly status meetings with offshore/ onsite team members and business users. Handled additional project management activities on the project such as daily coordination with offshore team, queries, and report status
- Maintained application database servers for all environments such as Dev, QA, UAT, and Production, and prepared, and executed maintenance scripts as and when needed
- Migrated the entire TFS source repository to the SVN along with change sets history (70000+). The task is accomplished using the in-house customized open source tool. Created SVN usage guide.
- Conducted the training sessions for onsite and offshore teams for SVN usage.
- Updated the CI server to use the newly setup source control with quick turnaround time.
- Integration of SVN with JIRA for code changes links
- Provided expertise/ solution in managing and maintaining organization wide SharePoint Portal site

Environment: JIRA, .NET 3.5/ 4.0, IIS 7.0, Visual Studio 2008, MS SQL Server 2008, Windows 2008 Server/ VM. CCNet. FxCop. NUnit. NDepend. NCover. MSBuild with
