MAINFRAME DEVELOPER

- ❖ A Mainframe Developer with 10+ years of experience and expertise in Application Development, modernization, system programming, troubleshooting and process improvement strategy initiatives.
- ❖ Domain expertise entails Banking, Health care, Financial services & Automobile Industry.
- ❖ Abilities in Environment Build for application development, system integration and enhancements.
- ❖ Traversed the entire Software development life cycle (SDLC) including requirement analysis, program design, development, debugging, testing, implementation and quality coordination, application maintenance under both Agile/scrum and waterfall models.
- ❖ Proficient to work autonomously and is highly organized, detail-oriented, self-directed, and capable of handling multiple projects.
- ❖ Engaged in the data ingestion process, data modeling for various requirements.
- ❖ An effective communicator with excellent interpersonal, analytical and client servicing abilities with exposure to diverse work environments.

EDUCATIONAL QUALIFICATION

- ❖ Completed BACHELOR OF TECHNOLOGY in INFORMATION TECHNOLOGY with a grade of 80% at ANNA UNIVERSITY, Chennai, India in May 2014.

SKILL SUMMARY

- ❖ **Operating System:** Z/OS, Windows
 - ❖ **Technologies** : Mainframe, AS400
 - ❖ **Languages** : JCL, COBOL, PL/1, CICS, REXX, Easytrieve, CLIST, JAVA, Python
 - ❖ **Database/File** : DB2, VSAM, SQL, PostgreSQL - PGAdmin 4 , Teradata
 - ❖ **Version Control** : Endevor, GitLab, GitHub
 - ❖ **Debugging Tools** : XPEditor
 - ❖ **Tools & Utilities** : FILE AID for DB2/MVS, File Manager, zMQ SPUFI, TSO/ISPF, HP Quality center, Web services interface, IDZ/IDE, JIRA, Confluence, CSS, XML & WSDL
 - ❖ **Scheduler** : CA7, ESP Job scheduler
-

ACCOMPLISHMENTS & AWARDS

- ❖ Received 'Dedication and Commitment Award' from Client for the prototype model for dynamic analysis.
 - ❖ Received multiple 'Applause certificate' from the Client for the exceptional work effort to support the CCR Systems.
 - ❖ Awarded 'Raising star of the quarter' and 'INSTA Award' from Infosys.
-

PROFESSIONAL EXPERIENCES:

MERCEDES BENZ FINANCIAL SERVICES, Farmington Hills, MI, United States

Role: Technology Lead - May 2023 - Till Date

Project: ACE Credit analysis

- Involved in a Data migration project as a part of mainframe modernization and Securely transferring customer PII information into distributed DB Postgres.
- Involved in developing python scripts for Data migration.
- Involved in Mainframe ACE credit application Enhancements and production support activities.
- Engaged in COBOL-DB2-CICS code enhancements for the application to communicate with the front end web services via MQ's.
- Act as a liaison between Clients, Leadership team, application architects and development teams to ensure that the product development and implementation are coordinated
- Creating a prototype model to determine the feasibility of project proposals.
- Performing impact analysis to find out the systems that could be potentially affected by proposed change(s), coding COBOL, CICS and DB2 components, testing of batch & online components(JOBS/JCL) under different environments and involved in implementation activities with CA7 Scheduler.
- Provided Solution Delivery Methodology artifacts associated with application components.
- Executed various forms of testing – unit, system, regression, integration, performance and volume testing.
- Managed all aspects of implementation, planning & coordination.
- Involved in production support activities like job monitoring, abend analysis and resolution.

TECH MAHINDRA/Highmark Health

Role: Associate Tech Specialist - March 2022 -Nov 2022

Project: Highmark Health - Provider management team- Facility Pricing

- Mastered the usage of GitHub, GitLab which is an alternative for Endevor, Changeman.
- Expertise in IBM developer for Z/OS tool set which is used to develop and maintain Applications through the use of DEVOPS practices on an eclipse base.
- Engaged in the Enhancement of Cobol-DB2-CICS components based on the received Change Request after a thorough impact analysis and deployed JCL components to production on a scheduled sprint end date.
- Executed various forms of testing – unit, system, regression, integration, performance and volume testing.
- Manipulation and extraction of data using Teradata.
- Developed automation tool to reduce manual intervention for a table creation and data loading process and deployed to production. Broadly appreciated by clients for the same.

ACCENTURE SOLUTIONS

Role: Application Development Senior Analyst – Oct 2019 - July 2020

Project: Bank of America- Core Modernization

- Worked with high volume and high dimensional data efficiently to produce data insight for prediction, forecasting and trend analysis to drive the business decision.
- Developed new system functionality, providing system maintenance & enhancements, and running and protecting the business by providing support for critical Risk applications.
- Performed debugging for the modified on-line programs using GUI/XI debugging tools for XML and Xpediter.
- Involved in the validation of coding standards in COBOL-DB2 component and generating the test coverage reports.
- Usage of CA7 scheduler to monitor and Validate batch jobs and components.
- Performed database/ disaster recovery planning for multiple systems.
- Created/Change various data files/tables such as VSAM, PDS, GDG and DB2 tables.

INFOSYS LTD

Role: Technology Analyst – May 2014 - Sep 2019

Project: Royal Bank of Scotland- Central Credit Register and Core Modernization

- Imparting domain and technical knowledge to the new entrants and fellow team members.
- As part of rollout type of works, the responsibilities include gathering the requirements from the clients, performing analysis on the business requirements and development of high level and detailed system design, test environment set-up, system testing, implementing the system into the production environment and providing warranty support.
- Engaged in COBOL-CICS-DB2 complete application development from scratch.
- Engaged in IBM Web services analysis and development with JAVA as a front end and development of REXX tools for client specific requirements.
- Preparation of various technical and functional documents (where applicable depending on the request types) Requirement Specification document, High Level Analysis and Approach document, High Level Design Document, Detailed Design Document, System test plan and test procedure document and implementation plans.

Project: HSBC- HUB Clustering for MENA

- Worked in Agile methodologies
- Carried out migration of Core infrastructure components depending on Local (L2C), Regional (R2C) requirement.
- Promoted the RPGLE, CLLE tested components to Core HUB platform.
- Participated in Support activities on various applications by accepting, resolving / fixing and routing the tickets to the appropriate groups.

Project: Royal Bank of Scotland - Rainbow-2

- Performing impact analysis to find out the systems that could be potentially affected by proposed change(s), coding COBOL, CICS and DB2 components, testing of batch & online components(JOBS/JCL) under different environments and involved in implementation activities with CA7 Scheduler.
- Established an Interface with business and IT teams to understand the business requirements and translate business requirements into formal technical requirements and application code.
- Further responsibilities comprise of ensuring top quality deliverables to clients and collection of project metrics.
