Data Scientist

[jmlampkin@gmail](mailto:jmlampkin@gmail.com) | linkedin.com/in/jonathan-lampkin

Highly accomplished Data Scientist with a Master's in Data Science (Honors) and four years of self-study, specializing in statistical modeling, machine learning, and deep learning. Proven ability to drive impactful business decisions using Python, SQL, and R. Actively pursuing GCP, Databricks, and TensorFlow certifications. Demonstrated success in projects involving NLP, time-series forecasting, and machine learning applications.

Education

Master of Science in Data Science (with Honors) | University of Colorado Boulder | 2025

Relevant Coursework: Machine Learning, Statistical Inference, Data Mining, Data Visualization, Big Data Analytics, Deep Learning.

Self-Study | Data Science | 2020 – Present

Dedicated to continuous learning and advancement in data science principles and techniques.

Career Experience

Data Analyst | AdMedia | 2023

Optimized digital ad space bidding using time-series forecasting, improving key metrics (CTR, Impressions, Conversions). Spearheaded the development of an improved data pipeline using Python, integrating macro data to enhance analytical insights.

AI Software Engineering Contractor | Common Computer | 2022

Engineered "People's Thoughts," a Python-based text summarizer and sentiment classifier using HuggingFace Transformers and the Twitter API for real-time topic analysis.

Projects

Inventory Optimization using Multi-AI Agent System | Accenture Hackathon | Current

Developing a Multi AI Agent System for Inventory Optimization using CrewAI, Ollama, Docker, and Nvidia CUDA

Telecom Customer Churn Prediction | Current

Developed and deployed an Interactive Executive Customer Churn Dashboard using Prophet and Streamlit.

<https://jonathanlampkin-customerchurn.streamlit.app/>

RAG Financial LLM | Current

Developing a RAG Financial LLM by fine-tuning a llama 3 model on a significant amount of financial data. A batch data processing pipeline using Apache Beam will ingest daily financial data into a FAISS vector database which the fine-tuned llama 3 model will use for Retrieval Augmented Generation, allowing the end user to interact with the model for up-to-date complex financial analysis and investment decision making.

AI Generated Text Classification | 2024

Built a text classification model to distinguish AI-generated from human-written text using Python, Hugging Face Transformer Models, Docker, and Nvidia CUDA

https://github.com/jonathanlampkin/DTSA5509/blob/main/DTSA5509_Final.ipynb

Skills

Programming Languages: Python (Pandas, NumPy, scikit-learn, TensorFlow, PyTorch), SQL, R

Machine Learning: Statistical Modeling, Regression, Classification, Clustering, NLP, Deep Learning

Big Data: Docker, CUDA, Kubernetes, Google Cloud Platform, Databricks, RabbitMQ, Apache Spark, Apache Beam

Databases: SQL (MySQL, PostgreSQL), Database Administration

Statistics: Hypothesis Testing, Probability A/B Testing, ANOVA, Regression Analysis

Tools: Git, GitHub CI/CD, Streamlit, FastAPI, Flask, Linux

Certifications

GCP Professional Data Engineer Certification | Expected Completion: 2025

Databricks Professional Data Engineering Certification | Expected Completion: 2025

DeepLearning.AI TensorFlow Developer Certificate | Expected Completion: 2025

Springboard Data Science Career Track | Completion: 2022

Dataquest Data Scientist Career Track | Completion: 2021
