SUMMARY

Software Engineer with 4 years of professional experience designing and delivering secure, scalable applications across healthcare and enterprise platforms. Skilled in full-stack development using Java, JavaScript/TypeScript, Python, and modern frameworks with expertise in architecting cloud-native solutions on AWS, Docker, and Kubernetes. Adept at applying testing methodologies, CI/CD automation, and quality-first engineering practices to ensure high system reliability and performance. Collaborative team player experienced in Agile environments, leveraging tools like JIRA, GitHub, and Confluence to drive continuous improvement, enhance code quality, and deliver impactful user experiences.

SKILLS

- **Programming Languages:** Java, JavaScript, TypeScript, Python, Bash
- **Software Engineering:** Object-Oriented Design (OOD), Design Patterns, System Design, Data Structures & Algorithms, SOLID Principles
- **Frontend Technologies:** React.js, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Redux, Zustand
- **Backend & API Development:** Node.js, Express.js, Spring Boot, FastAPI, REST APIs, GraphQL, Microservices Architecture
- **Databases & Storage:** PostgreSQL, MySQL, MongoDB, Firebase, SQLite, Prisma ORM, Mongoose
- **DevOps & Cloud Platforms:** Docker, Kubernetes (basic), GitHub Actions, AWS (EC2, S3, Lambda), Vercel, Netlify
- **CI/CD & Infrastructure Automation:** GitHub Actions, AWS CLI, Docker Compose, Jenkins (basic)
- **Testing & Quality Assurance:** Unit & Integration Testing, Jest, React Testing Library, Chrome DevTools, Test-Driven Development (TDD)
- **Security & Authentication:** OAuth 2.0, JWT, Firebase Auth, Role-Based Access Control (RBAC), Secure API Design
- **Monitoring & Observability:** Prometheus, Grafana, Logging (ELK), Tracing & Alerting (basic)
- **Tools & Utilities:** Git, GitHub, Bitbucket, Postman, ESLint, Prettier, Webpack, NPM
- **Project Management & Collaboration:** Agile, Scrum, JIRA, Trello, Notion, Confluence

WORK EXPERIENCE

CVS Health

July 2025 – Present

Software Engineer

- Contributing to the Health Tech Ecosystem Platform, a national initiative to enable interoperability across payers, providers, and pharmacies, by designing and implementing scalable, secure cloud-native services.
- Developed and optimized backend APIs using Node.js, FastAPI, and GraphQL, ensuring compliance with healthcare standards such as FHIR and HIPAA.
- Built modular, responsive frontend components in Next.js with Tailwind CSS, enhancing patient and provider portal usability.
- Integrated cloud solutions on AWS (Lambda, S3, EC2) with automated pipelines via GitHub Actions and Docker, reducing deployment cycles by 40%.
- Implemented robust authentication and authorization models with OAuth 2.0, JWT, and RBAC, strengthening data security and patient privacy.

VMware

Jan 2020 – July 2023

Software Engineer

- Engineered core features of Harbor (Enterprise Container Registry), enhancing container security and compliance for enterprise-scale Kubernetes deployments.
- Developed microservices in Java and Go, implementing image replication, scanning, and lifecycle management to support global-scale DevOps teams.
- Integrated role-based access control (RBAC) and OAuth 2.0/JWT authentication, strengthening registry security and meeting enterprise compliance standards.
- Built RESTful APIs with Spring Boot and Express.js, enabling seamless integration between Harbor and external CI/CD pipelines.
- Improved container vulnerability scanning workflows using Clair and Trivy, reducing security exposure windows by 35%.
- Optimized database performance with PostgreSQL and MySQL, achieving faster metadata queries and reducing registry latency under heavy workloads.

- Automated deployment and scaling on Kubernetes and Docker, leveraging Helm charts for consistent environment provisioning.
- Implemented CI/CD pipelines with Jenkins and GitHub Actions, cutting build and release cycles by 30%.
- Collaborated in an Agile environment using JIRA, Confluence, and GitHub, delivering iterative enhancements and ensuring high-quality code through unit and integration testing.

PROJECTS

Healthcare Analytics Dashboard

- Designed an interactive data visualization dashboard using Python (Pandas, Matplotlib) and Tableau to analyse patient admission patterns and healthcare resource utilization.
- Applied predictive analytics and regression models to forecast patient load and support scenario planning for healthcare operations.
- Delivered insights through a visual storytelling presentation, improving clarity for non-technical stakeholders and showcasing data-driven recommendations.

Automated Student Records Management System

- Built a full-stack web application using SQLite, Flask, and JavaScript to streamline academic records management and automate routine tasks.
- Implemented role-based access control (RBAC) for administrators, faculty, and students, ensuring secure access to sensitive academic data.
- Enhanced the efficiency of student information retrieval and improved accuracy through workflow automation.

EDUCATION

Master in Management Information Systems

Aug 2023 – May 2025

California State University, Long Beach – Long Beach, CA
