EDUCATION

Southeast Missouri State University MS Applied Computer Science 2023	Aug. 2022 - Dec. 2023
Narasaraopet Engineering College Bachelors Mechanical Engineering 2016	Aug. 2012 - May. 2016

EMPLOYMENT

Employer - IT Ridge Technologies - DB2 Database Administrator Client - Bank of America, Texas, USA Project - Jupiter technologies	Nov 2024 - Present
--	--------------------

The project is a robust suite of services, including proactive monitoring, efficient management, and insightful reporting, coupled with seamless cloud provisioning, enablement, and orchestration. Our expertise extends across diverse platforms, encompassing server management, databases, backup solutions, storage security, and cloud environments. All these services are efficiently managed through intuitive online portals, empowering our clients to achieve their operational goals with confidence and ease.

Employer - Mejenta Inc - DB2/Postgres Database Administrator Client - CVS Pharmacy, Atlanta, USA Project - IMI group	March 2024- Nov 2024
---	----------------------

The project is one of the service-based that offers the infrastructure to manage the banking, department stores, metro trains, and musical equipment projects. IMI provides remote managed services for legacy, third-party, and hybrid cloud infrastructures. These services include cloud provisioning, orchestration, and enablement across the server platform, database, backup, and storage security, as well as monitoring, management, and reporting services that are managed through portals.

Employer - IBM-Kyndryl Solutions - DB2/Postgres Database Administrator Project - MCMS group, Bangalore, India	Feb. 2019 - Aug. 2022
--	-----------------------

The MCMS Group is one of the service-based projects providing the facilities to handle the Banking, departmental stores, musical equipment, and metro trains project and one of the banking services. MCMS delivers Remote Managed Services for legacy, 3rd party Clouds and Hybrid cloud infrastructures, proving monitoring, Management and Reporting Services together with Cloud provisioning, enablement and orchestration across the server platform, database, backup and storage security and cloud, managed via portals.

The goal of the project is Database Optimization and Maintenance project is to improve the security, dependability, and performance of our company's database systems. To serve business-critical applications and guarantee smooth data operations, this project entails evaluating, optimizing, and maintaining the current database infrastructure. This project description describes a thorough strategy for maintaining and improving the database systems to make sure they satisfy the availability, security, and performance needs of the company.

Roles & Responsibilities – DB2 LUW administrator

Install, configure, and maintain IBM DB2 databases on Linux, UNIX, IBM Cloud platforms.

Perform database upgrades and patches to ensure the environment is up to date and secure.

Monitor and analyze database performance, identifying bottlenecks and tuning SQL queries for optimal performance.

Design and implement robust backup strategies, including automated backups, point-in-time recovery, and disaster recovery planning.

Data movement utilities like EXPORT, IMPORT, LOAD and MOVE commands to transfer data between files and the database.

Database Maintenance utilities like maintenance tasks, such as reorganization and updates to statistics.

Monitor and analyze database performance, identifying bottlenecks and tuning SQL queries for optimal.

HADR set up and HAICU configurations on servers with multiple node availability in a disaster situation.

DB2 version upgrades and DB2 fix pack installations to ensure the environment is up to date and secure.

Database Maintenance utilities like maintenance tasks, such as reorganization and updates to statistics.

Handling table space and file systems space issues without getting log full conditions and tablespaces to get max limit of utilization.

Validation of customer security deviations as per the compliance level set up by the account management team.

Involving the support activities and instant, DB2 services recycling process and application handles shutdown.

Monitoring the db2diag.log thoroughly for any in doubt transactions and deadlock errors, lock waits.

Roles & Responsibilities – Postgresql administrator

Responsible for PostgreSQL software installation.

Skilled in setting up authentication mechanisms using the pg_hba.conf file.

Proficient in PostgreSQL upgrade activities.

Experienced in user administration.

Capable of configuring backups using tools like pg_dump, pg_dumpall, and pg_basebackup.

Experienced in performing restore activities.

Adept at configuring streaming replication in PostgreSQL.

Utilizing PG-Badger reporting tools effectively to analyze and optimize database performance.

Providing L2 customer support for PostgreSQL-related activities.

Assisted in designing and management of PostgreSQL database schemas and tables.

Engaged with technical team members in installation, configuration and maintenance of SQL servers.

Supported for rotational shifts and 24/7 on-call hours.

SKILLS

RDBMS: DB2 LUW V9.7, V10.1, V10.5, V11.1, V11.5, PostgreSQL V15.x, V16.x, V17.x,

DATABASE TOOLS: DB2 Connect, IBM Data Server client, DB2 Dart, DB2 Inspect, DB2 Explain, DB2 Optimize, HADR, TSA, TSMP, SQL and Q replications, DbGate, pgAdmin, DBeaver

OPERATING SYSTEMS: AIX 6.1/5.3/5.x/4.3.x, Redhat Linux, 6.8, 7.2, 7.6, 7.8,8.6, Windows 7/9/10/11/12.

PROGRAMMING AND SCRIPTING LANGUAGES: Java, Shell Scripting

GRADUATION PROJECTS

Three Factor Authentication for Diabetic Tracking system - ADBS

Jan 2023 - Apr 2023

To help patients with diabetes manage their disease, the project is an app that monitors users' blood sugar levels and meals. The system's users have the option to register, set up a brand-new account, choose a strong password, and change it, as necessary. Additional features provided by the system include a picture password and security questions. I used PHP, PHP Admin, HTML, SQL queries, sublime text.

Created login pages using HTML, for client and manager to access the medical equipment and renting. Where clients can access the rental page and rent an equipment, payment. The manager has access to update stock, check payments, profits. I used SQL, HTMPL, PHP coding, PHP admin, and Sublime text.
