

Madhu Gangadhar | DevOps Engineer

Location: FL, USA | Phone: +1 (850)-980-5969 | Email: madhugangadhar275@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Results-driven **DevOps Engineer** with **6+ years of experience** in automating cloud infrastructure, optimizing CI/CD pipelines, and enhancing system reliability. Skilled in designing and implementing **scalable, secure, and high-availability architectures** in cloud environments. Proven track record of **migrating legacy applications**, improving deployment efficiency, and reducing downtime. Experienced in integrating **DevSecOps best practices**, ensuring security and compliance in enterprise systems. Adept at collaborating with **cross-functional teams** to streamline development, operations, and security processes. Strong background in **cost optimization, performance tuning, and monitoring**, improving system efficiency and reducing cloud expenditures. Passionate about driving **automation, innovation, and operational excellence** in fast-paced IT environments, supporting industries such as **healthcare, finance, and technology** in the **US IT market**.

TECHNICAL SKILLS

Programing Language:	Java, C#, JavaScript
Configuration Management:	Ansible, Chef, Puppet, Nagios
Containers & Orchestration:	Docker, Kubernetes
Infrastructure as Code (IaC):	Terraform, CloudFormation
CI/CD & Build Tools:	Jenkins, GitLab, Bamboo, SonarQube, Maven, Gradle
Cloud Platforms:	AWS (EC2, ELB, IAM, S3, CloudWatch, Redshift, Auto Scaling, CloudFormation), Azure
Monitoring & Logging:	Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk
Scripting & Automation:	Bash, Python, Groovy, YAML, Shell Scripting, PowerShell
Databases:	SQL Server, MySQL
Web Servers:	Apache Tomcat
Version Control:	Git, GitHub, Bitbucket
Methodologies:	SDLC, Agile, Waterfall

PROFESSIONAL EXPERIENCE

UnitedHealth Group, FL, USA DevOps Engineer	Jan 2024 – Current
- Assisted cloud automation initiatives, designing Infrastructure as Code (IaC) solutions using Terraform and AWS CloudFormation, reducing infrastructure provisioning time by 60% and eliminating manual misconfigurations. - Architected and managed CI/CD pipelines with Jenkins, GitLab, and Bamboo, cutting deployment times by 50%, automating testing, and increasing release reliability across multi-environment deployments. - Orchestrated Kubernetes clusters, deploying and managing microservices architecture, improving scalability and reducing production downtime by 30% through auto-healing and load balancing. - Developed centralized monitoring solutions with Prometheus, Grafana, and the ELK Stack (Elasticsearch, Logstash, Kibana), creating real-time dashboards that reduced incident response time (MTTR) by 40%. - Enhanced cloud security posture by enforcing AWS IAM best practices, RBAC (Role-Based Access Control), and secrets management (AWS Secrets Manager, Hashi Corp Vault), improving compliance with HIPAA and SOC 2 regulations. - Implemented automated cost-optimization strategies, leveraging AWS Auto Scaling, right-sizing EC2 instances, and Reserved Instances, reducing monthly cloud expenditures by 20%. - Led the migration of legacy applications to containerized environments using Docker and Kubernetes, improving deployment efficiency and accelerating feature releases. - Collaborated with cross-functional teams, including security, development, and infrastructure, to integrate DevSecOps, reducing security vulnerabilities in production by 35% through automated security scans and compliance checks.	
Mphasis, India DevOps Engineer	Jan 2019 – Jul 2022
- Designed and deployed multi-cloud DevOps solutions on AWS and Azure, optimizing hybrid cloud strategies and reducing operational costs by 35% while improving system scalability. - Developed Infrastructure as Code (IaC) automation using Terraform and Ansible, enabling zero-downtime deployments and reducing manual configuration errors by 90%. - Built and optimized high-availability CI/CD pipelines, integrating Jenkins, GitHub Actions, SonarQube, and Nexus, reducing deployment failures by 45% and increasing release velocity. - Implemented centralized logging and monitoring using Splunk and ELK Stack, creating proactive anomaly detection alerts that reduced MTTR (Mean Time to Resolution) by 40%. - Enhanced security and compliance automation, integrating AWS Config, AWS Security Hub, and Guard Duty, ensuring 100% adherence to industry security best practices. - Optimized AWS cloud resources, automating backups, data retention policies, and disaster recovery (DR) strategies, ensuring 99.99% service uptime. - Designed and deployed scalable cloud infrastructure, implementing AWS ALB (Application Load Balancer) and Auto Scaling Groups to dynamically manage traffic spikes and ensure seamless performance.	
Mphasis, India DevOps Engineer Intern	Jul 2018 – Dec 2018
Assisted in migrating on-premises applications to AWS, deploying scalable architectures using EC2, S3, and RDS, ensuring a seamless transition with minimal downtime.	

- **Developed Terraform scripts** to automate infrastructure provisioning, reducing deployment time from **3 hours to 15 minutes**, enhancing deployment consistency.
- Designed and implemented **centralized logging and monitoring** using **Nagios and ELK Stack**, improving issue detection and reducing **troubleshooting efforts by 35%**.
- **Optimized CI/CD workflows**, integrating **Jenkins and GitLab**, enabling automated builds, reducing manual deployment errors, and increasing release frequency.
- **Configured and secured Apache Tomcat servers** for Java-based applications, ensuring **high availability, optimized performance, and robust security configurations**.
- Assisted in **AWS cost optimization strategies**, analysing usage trends and implementing **auto-scaling policies**, reducing cloud expenses by **15%**.

Cybage Software, India	Jul 2017 – Jun 2018
System Engineer	
• Managed Linux-based server environments, ensuring 99.9% uptime for mission-critical applications through proactive monitoring and performance tuning. • Automated system administration tasks using Bash and PowerShell scripting, reducing manual intervention and improving operational efficiency by 40%. • Implemented infrastructure security hardening, configuring firewalls, SSH access controls, and vulnerability patching, reducing system security risks. • Optimized Apache Tomcat and MySQL configurations, reducing application response time by 25% and improving database query performance. • Deployed system monitoring solutions with Nagios and Splunk, creating real-time alerts that improved incident response times and minimized downtime. • Collaborated with development teams to troubleshoot and resolve server performance issues, reducing critical application outages by 30%.	

EDUCATION

Master of Science in Computer Science	May 2024
Florida State University, Tallahassee, Florida, US	
Bachelor of Engineering in Information Science	Jun 2019
Acharya Institute of Technology, Bengaluru, India	

CERTIFICATIONS

[AWS Certified DevOps Engineer - Professional certification](#)
[Certified Kubernetes Administrator \(CKA\)](#)

PROJECTS

Cloud Infrastructure Automation and CI/CD Pipeline Development AWS (EC2, S3, RDS, VPC), Jenkins	Jun 2020
• Automated AWS Infrastructure: Spearheaded the design and automation of AWS resources, including EC2, S3, RDS, and VPC, using Terraform, reducing manual provisioning efforts by 70%. • CI/CD Pipeline Integration: Developed a highly efficient CI/CD pipeline using Jenkins to automate build, testing, and deployment processes, reducing code-to-deployment time by 40%. • Configuration Management: Created robust Ansible playbooks for automated configuration management, patch updates, and software installations across 50+ AWS instances. • High Availability & Uptime: Ensured 99.9% system uptime by automating backup and disaster recovery strategies for critical cloud resources.	
End-to-End DevOps Automation for FinTech Platform Jenkins, Docker, Kubernetes	Sep 2021
• Infrastructure as Code: Designed and deployed cloud infrastructure on Google Cloud Platform (GCP) using Terraform, automating the provisioning of Compute Engine instances, Cloud SQL, and GKE (Google Kubernetes Engine) clusters, reducing deployment errors by 90%. • CI/CD Pipeline Automation: Established a fully automated CI/CD pipeline using Jenkins and Spinnaker, streamlining the deployment process and reducing manual intervention by 60%, leading to faster service delivery. • Containerization of Microservices: Transformed legacy applications into Microservices and containerized them using Docker, deploying onto Kubernetes (GKE) for automated scaling and management.
