SUMMARY

- **DevOps & Site Reliability Engineer (SRE) with 9+ years of experience**, specializing in **AWS and Azure cloud platforms**.
- **Expert in Infrastructure as Code (IaC)** using **Terraform, AWS CloudFormation, AWS CDK, and Azure Bicep** for automated cloud provisioning and infrastructure management.
- **Proficient in CI/CD automation**, designing and maintaining pipelines using **Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps, AWS CodePipeline, AWS CodeBuild, AWS CodeDeploy, and CircleCI**.
- **Containerization & Kubernetes specialist**, managing workloads on **EKS, AKS, OpenShift**, deploying **Helm charts** and optimizing Kubernetes clusters.
- **Monitoring & observability expert**, utilizing **Prometheus, Grafana, AWS CloudWatch, Azure Monitor, ELK Stack, Datadog, Splunk, New Relic, and OpenTelemetry** for real-time system insights.
- **Incident management and alerting expert**, integrating **PagerDuty, Nagios, AppDynamics, Kibana, Asana, Jira, and Incident Alerting Solutions** to streamline operational efficiency.
- **Multi-cloud networking expert**, implementing **VPC peering, hybrid connectivity (AWS Direct Connect, Azure ExpressRoute)**, and service mesh solutions like **Istio and Linkerd**.
- **DevSecOps & cloud security advocate**, integrating security tools like **AWS Security Hub, AWS Config, Azure Security Center, Aqua Security, Prisma Cloud, and HashiCorp Vault** into CI/CD workflows.
- **Disaster recovery (DR) and high-availability specialist**, leveraging **AWS Auto Scaling Groups, Azure VMSS, Kubernetes HPA, and multi-region failover strategies**.
- **Cost optimization strategist**, using **AWS Cost Explorer, AWS Compute Optimizer, Azure Cost Management, and reserved instances** to reduce cloud expenditure.
- **Proven experience in large-scale cloud migrations**, successfully transitioning applications from **Azure to AWS**, modernizing workloads for performance and resilience.
- **Incident response & root cause analysis (RCA) expert**, implementing **AWS Fault Injection Simulator (FIS), Azure Chaos Studio, and ITIL incident management best practices**.
- **SRE advocate**, defining **SLOs, SLIs, SLAs, error budgets**, and conducting post-mortem analysis to improve system reliability.
- **Expert in automation scripting**, developing custom tools using **Python, Bash, PowerShell, and Golang** to optimize cloud operations.
- **Hands-on experience in log aggregation & APM tools**, using **Splunk, New Relic, AppDynamics, Datadog, and ELK Stack** for deep application insights and debugging.
- **Proficient in hybrid & multi-cloud strategies**, leveraging **AWS Outposts and Azure Arc** for workload orchestration across cloud environments.
- **Strong background in ITIL, Agile, and DevOps methodologies**, fostering collaboration between development, security, and operations teams.
- **Designed and deployed scalable, fault-tolerant cloud architectures** using **EC2, AWS Elastic Beanstalk, S3, RDS, Auto Scaling, Kubernetes, and serverless computing**.
- **Developed multi-stage CI/CD pipelines** incorporating **unit tests, security scanning (SAST/DAST), compliance validation, and canary deployments**.
- **Implemented security automation** for **IAM governance, vulnerability scanning, key rotation, and encryption** across cloud environments.
- **Led the development of self-healing infrastructure**, using **event-driven automation, AWS Lambda, Azure Functions, AWS Systems Manager, and Step Functions**.
- **Orchestrated blue-green deployments and rolling updates** using **Kubernetes, AWS CodeDeploy, and Azure DevOps Pipelines**.
- **Managed cloud storage solutions**, implementing **S3 lifecycle policies, Azure Blob Storage, and DynamoDB on-demand scaling**.
- **Developed Kubernetes security best practices**, implementing **RBAC, Pod Security Policies, Network Policies, and IAM roles for service accounts**.
- **Implemented observability best practices**, integrating **distributed tracing tools** such as **AWS X-Ray, OpenTelemetry, and New Relic APM**.
- **Developed cloud governance strategies**, implementing **AWS Organizations, Azure Management Groups, and budget alerts**.

- Configured and optimized database solutions, including AWS RDS, Aurora, Azure SQL, and DynamoDB.
- Implemented real-time application performance monitoring using Prometheus AlertManager, AWS CloudWatch Alarms, and Grafana dashboards.
- Built Infrastructure as Code (IaC) governance policies, automating compliance checks across cloud environments.
- Developed security and compliance guardrails, enforcing SOC 2, HIPAA, PCI DSS, and NIST 800-53 standards.
- Optimized cloud deployments for cost efficiency, leveraging spot instances, reserved instances, and autoscaling strategies.
- Designed and deployed API management solutions, using AWS API Gateway, Azure API Management, and Kong.
- Developed custom automation tools to streamline CI/CD pipelines, cloud provisioning, log analysis, and security monitoring.
- Integrated ChatOps tools like Slack and Microsoft Teams for automated deployment notifications and incident response.
- Led Kubernetes modernization projects, migrating applications to containerized environments for better scalability and operational efficiency.
- Implemented event-driven architectures, using AWS SNS, SQS, EventBridge, and Azure Service Bus for asynchronous processing.
- Developed auto-remediation workflows using AWS Step Functions, Terraform Automation, and AWS Systems Manager.
- Configured intelligent alerting systems using AWS SNS, PagerDuty, and Opsgenie for proactive incident resolution.
- Designed hybrid cloud networking solutions, integrating AWS Transit Gateway, Azure ExpressRoute, and VPC peering.
- Managed infrastructure security using Webmin, Cockpit, Nmap, Wireshark, Shorewall, OpenSSH, Tcpdump, Zenmap, Apache Directory.
- Implemented and optimized Linux system monitoring with GNOME System Monitor, Graphical Ping (gping), Sed, Vmstat, YaST, Netstat.
- Integrated advanced logging and event processing, using AWS CloudTrail, Azure Log Analytics, and Splunk.
- Developed cloud-native applications, leveraging AWS Lambda, DynamoDB, API Gateway, and Step Functions to build fully serverless architectures.
- Led technical teams, mentoring DevOps engineers and conducting hands-on training on best practices in cloud automation and security.
- Optimized cloud storage and backup solutions, implementing cross-region replication and automated data lifecycle policies.

EDUCATION

National University
Bachelor of Science in Computer Science

CERTIFICATES

- AWS Certified Solutions Architect

SKILLS

1. Cloud Computing & Infrastructure Management

- **AWS:** EC2, S3, IAM, VPC, RDS, Lambda, EKS, ECS, AWS CodePipeline, AWS CodeDeploy, AWS CodeBuild, AWS CodeStar, AWS Elastic Beanstalk, AWS Compute Optimizer, AWS Systems Manager, AWS CloudFormation, AWS CDK
- **Azure:** Azure VMs, AKS, Functions, DevOps, App Services, Azure Monitor, Azure Boards, Azure Repos, Azure Artifacts
- **Multi-Cloud & Hybrid:** Infrastructure as Code (IaC), Kubernetes Federation, AWS Direct Connect, Azure ExpressRoute

2. Containerization & Orchestration

- **Containers:** Docker, Podman, Buildah
- **Orchestration:** Kubernetes (EKS, AKS), OpenShift, Terraform
- **Service Mesh:** Istio, Linkerd, Consul
- **Container Security:** Aqua Security, Prisma Cloud, Trivy

3. CI/CD & Automation

- **CI/CD Tools:** Jenkins, GitHub Actions, GitLab CI/CD, Azure Pipelines, AWS CodePipeline, ArgoCD, CircleCI
- **Artifact Management:** Nexus, Artifactory, AWS CodeArtifact
- **Deployment Strategies:** Blue-Green, Canary, Rolling Deployments
- **Configuration Management:** Ansible, Chef, Puppet, Salt

4. Infrastructure as Code (IaC) & Automation

- **IaC Tools:** Terraform, AWS CloudFormation, Azure Bicep, AWS CDK
- **Configuration Management:** Ansible, Chef, Puppet, Salt
- **Scripting:** Bash, Python, PowerShell, Golang

5. Logging, Monitoring & Observability

- **Monitoring & Alerting:** Prometheus, Grafana, AWS CloudWatch, Azure Monitor, Nagios, Datadog, PagerDuty
- **Log Management:** ELK Stack (Elasticsearch, Logstash, Kibana), Fluentd, Filebeat, Splunk
- **Tracing & APM:** OpenTelemetry, AWS X-Ray, New Relic, AppDynamics

6. Security & Compliance (DevSecOps)

- **Cloud Security:** AWS Security Hub, AWS Config, Azure Security Center
- **Secrets Management:** AWS Secrets Manager, Azure Key Vault, HashiCorp Vault
- **Code Scanning & Compliance:** SonarQube, Snyk, Trivy, Checkov
- **Networking & Security:** VPC Peering, VPN, Security Groups, Shorewall, OpenSSH, Firewalls

7. Networking & Load Balancing

- **Load Balancers:** AWS ALB/ELB, Azure Traffic Manager, Nginx, HAProxy
- **DNS & Routing:** Route 53, Azure DNS
- **Networking & Security:** TCP/IP, SSL/TLS, DHCP, DNS, VPN, IPSec, LAN/WAN, MPLS

8. Version Control & Collaboration

- **Version Control:** Git, GitHub, GitLab, Bitbucket, Azure Repos, Subversion
- **Collaboration & Project Management:** Jira, Confluence, Trello, Slack, Asana, Azure Boards

9. Site Reliability Engineering (SRE)

- **Reliability Testing:** AWS Fault Injection Simulator (FIS), Azure Chaos Studio
- **Error Budgeting & SLOs:** SLOs, SLIs, SLAs
- **Disaster Recovery & Backup:** AWS Backup, Azure Site Recovery

10. DevOps Best Practices & Methodologies

- **Agile & Scrum:** CI/CD workflows for iterative releases
- **Shift-Left Testing:** Early-stage security and performance testing in CI/CD
- **GitOps & Automation:** GitOps tools like ArgoCD, Flux

11. Infrastructure Deployment & Incident Management

- **Incident Alerting Solutions:** PagerDuty, Slack, Incident Management Platforms
- **Infrastructure Deployment Tools:** Jenkins, Terraform, Azure DevOps Server

PROFESSIONAL EXPERIENCE

Role : Senior Site Reliability Engineer (SRE)

07/2021 – present | United States

Client : Rexel USA

Responsibilities:

- **Designed and deployed** highly available, fault-tolerant, and scalable cloud infrastructure across **AWS and Azure** using **Terraform, Ansible, and Salt**.
- **Developed and maintained** robust **CI/CD pipelines** using **Jenkins, GitLab CI/CD, and Argo CD**, enabling seamless automated deployments with minimal downtime.
- **Implemented GitOps workflows** using **Argo CD and Flux**, ensuring version-controlled, automated, and secure Kubernetes deployments.
- **Led SLO/SLI/SLA implementation**, defining key service reliability metrics, reducing MTTR, and improving system uptime to **99.99% availability**.
- **Automated cloud infrastructure provisioning** using **Terraform and CloudFormation**, optimizing resource management and cost-efficiency.
- **Integrated advanced monitoring solutions** with **Prometheus, Grafana, Datadog, Nagios, and New Relic** for real-time observability across cloud environments.
- **Implemented proactive incident alerting solutions** using **PagerDuty, OpsGenie, AWS EventBridge, and Slack**, improving response time for critical issues.
- **Developed self-healing systems** using **AWS Lambda and Azure Logic Apps**, reducing manual intervention and operational overhead.
- **Orchestrated blue-green deployments and canary releases**, ensuring seamless rollouts with minimal risk to production environments.
- **Optimized cloud cost management strategies** by leveraging **AWS Cost Explorer, Azure Cost Management, and FinOps best practices** to reduce unnecessary expenses.
- **Secured infrastructure** by implementing **zero-trust security models, IAM least-privilege policies, and role-based access control (RBAC)**.
- **Managed hybrid and multi-cloud architectures**, integrating **AWS Direct Connect, Azure ExpressRoute, and VPN** solutions for on-premise connectivity.
- **Developed and enforced disaster recovery (DR) strategies**, implementing **multi-region failover** using **AWS Route 53, Azure Traffic Manager, and load balancers**.
- **Conducted chaos engineering experiments** using **AWS Fault Injection Simulator (FIS) and Azure Chaos Studio** to validate system resilience.
- **Streamlined log aggregation and analysis** using **Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), Fluentd, and CloudWatch Logs**.
- **Reduced system downtime and performance bottlenecks** by implementing **distributed tracing solutions** with **AWS X-Ray, Azure Application Insights, and OpenTelemetry**.
- **Developed containerized applications** using **Docker and Kubernetes**, implementing Helm charts for automated deployments in **EKS and AKS**.
- **Led a seamless migration of on-premises workloads to AWS and Azure**, modernizing legacy applications for cloud-native architectures.
- **Developed Python and Bash automation scripts** to improve operational efficiency, reducing manual workload and response time.
- **Implemented advanced CI/CD security** using **AWS CodePipeline, Azure DevOps, and Jenkins**, ensuring secure deployments through automated scanning and compliance checks.
- **Built Infrastructure as Code (IaC) governance policies** using **Terraform Sentinel and Azure Policy** to enforce security and compliance across cloud environments.
- **Deployed and managed API gateways** (AWS API Gateway, Azure API Management) to enhance API security, monitoring, and access control.
- **Optimized auto-scaling strategies** using **AWS Auto Scaling Groups, Azure Virtual Machine Scale Sets, and Kubernetes HPA**, improving resource utilization.
- **Led cross-functional collaboration** between development, security, and operations teams to align SRE practices with business goals.
- **Implemented real-time performance monitoring** using **AppDynamics, New Relic, and Datadog APM**, ensuring optimal application health and efficiency.
- **Designed and deployed centralized logging and monitoring systems** using **Grafana, Kibana, and Prometheus Alertmanager**.
- **Developed and automated compliance checks** to enforce **SOC 2, HIPAA, and PCI DSS security standards** across AWS and Azure environments.

- **Configured intelligent alerting rules in Prometheus Alertmanager, CloudWatch Alarms, and Azure Monitor Alerts** to proactively detect anomalies.
- **Worked on performance/load testing** using JMeter, BlazeMeter, and k6, identifying system bottlenecks and optimizing response times.
- **Developed and maintained Terraform modules and Helm charts** to automate EKS cluster setup and stateful application deployments.
- **Deployed AI-driven anomaly detection** using AWS Machine Learning services to predict and mitigate failures before they impact production.
- **Implemented security automation** using AWS Security Hub, Azure Security Center, and automated IAM policy validation tools.
- **Automated cloud resource cleanup and optimization** using custom Python scripts and AWS Lambda, reclaiming unused quotas and reducing waste.
- **Integrated Kubernetes observability** with Loki, Fluentd, and Jaeger for better debugging and troubleshooting of distributed systems.
- **Optimized CI/CD pipelines** for microservices deployments using Jenkins Shared Libraries and GitHub Actions.
- **Implemented Infrastructure as Code linting and policy enforcement** using Checkov and Terraform Sentinel.
- **Designed Kubernetes security hardening strategies**, including pod security policies, network policies, and RBAC implementation.
- **Optimized service-to-service communication in microservices** using service mesh solutions like Istio and Linkerd.
- **Migrated and modernized monolithic applications into microservices** using Spring Boot and Kubernetes.
- **Developed and maintained centralized secrets management** using AWS Secrets Manager, HashiCorp Vault, and Azure Key Vault.
- **Implemented fine-grained access controls** using IAM roles, policies, and Azure Active Directory (AAD) Conditional Access.
- **Developed and optimized caching strategies** using Redis, Memcached, and AWS ElastiCache.
- **Configured and secured CI/CD pipelines** by integrating static and dynamic security analysis (SAST/DAST) into automated workflows.
- **Reduced downtime through canary deployments** using feature flagging tools like LaunchDarkly and Flagger.
- **Developed auto-remediation workflows** using AWS Step Functions and Azure Automation Runbooks.
- **Designed hybrid cloud networking solutions** integrating AWS VPC peering, Azure VNet peering, and secure on-prem connections.
- **Deployed and optimized relational and NoSQL databases**, including MongoDB, MySQL, PostgreSQL, and DynamoDB.
- **Implemented centralized authentication and authorization** using OAuth2, OpenID Connect (OIDC), and SAML integrations.
- **Designed high-throughput messaging systems** using Kafka, RabbitMQ, and AWS SNS/SQS.
- **Developed Helm charts and Kubernetes Operators** to automate the lifecycle management of containerized applications.
- **Integrated CI/CD security best practices**, ensuring applications meet compliance requirements before production deployment.
- **Orchestrated large-scale infrastructure deployments** using Kubernetes Operators and Infrastructure as Code.
- **Standardized cloud governance policies** using AWS Organizations and Azure Management Groups.
- **Implemented container image scanning** with Trivy, Clair, and AWS ECR scanning to detect vulnerabilities in containerized applications.
- **Provided thought leadership and mentoring on SRE best practices**, improving overall team efficiency and system reliability.

Environment: AWS, Azure, OpenStack, Terraform, Ansible, Puppet, Salt, Kubernetes, Docker, Prometheus, Grafana, Datadog, Nagios, New Relic, AppDynamics, PagerDuty, Slack, Jira, Jenkins, Git, GitLab CI/CD, Argo CD, Flux, Helm, Elasticsearch, Logstash, Kibana (ELK), Splunk, Fluentd, Filebeat, Python, Bash, JMeter, API Gateway, AWS Lambda, Azure Logic Apps.

Role : Senior DevOps Engineer

05/2019 – 06/2021 | United States

Client : Chinese American Service League (CASL)

Responsibilities:

- **Designed and deployed** scalable, secure, and cost-effective cloud infrastructure on **AWS and Azure** using **Terraform, Ansible, Puppet, and Kubernetes**.

- **Managed and optimized Kubernetes clusters** (EKS, AKS), including Helm chart deployments, networking, security policies, and auto-scaling configurations.
- **Developed and maintained CI/CD pipelines** with Jenkins, GitLab CI/CD, Bamboo, and Bitbucket Pipelines for automated build, test, and deployment workflows.
- **Automated infrastructure provisioning** using Terraform, Puppet, and CloudFormation, ensuring consistent and repeatable deployments.
- **Configured and managed containerized workloads** using Docker, Kubernetes, Amazon ECS, and Helm charts for production environments.
- **Built Infrastructure as Code (IaC) templates** using Terraform, Ansible, Puppet, and Chef to standardize cloud and on-prem infrastructure.
- **Developed Golang and PERL scripts** to automate system health monitoring, infrastructure provisioning, and CI/CD processes.
- **Configured monitoring and alerting solutions** with Prometheus, Grafana, Nagios, AWS CloudWatch, and Splunk to improve system observability.
- **Implemented configuration management** using Puppet, Ansible, and Chef to automate infrastructure provisioning and ensure consistency.
- **Developed automated security scanning** and DevSecOps best practices, integrating SAST/DAST tools into CI/CD pipelines.
- **Led cloud security initiatives**, implementing IAM roles, RBAC, MFA, and encryption policies in AWS and Azure.
- **Developed and optimized logging pipelines** using ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, and Fluentd.
- **Automated server configuration** and management with PowerShell DSC, Ansible, and Terraform to eliminate manual interventions.
- **Optimized cloud cost management** by leveraging AWS Cost Explorer and Azure Cost Management, reducing unnecessary expenses.
- **Designed and implemented high-availability solutions**, including multi-region failover, cross-region replication, and RDS Multi-AZ configurations.
- **Orchestrated application releases** using blue-green deployments, canary releases, and GitOps workflows (Argo CD, Flux).
- **Developed disaster recovery (DR) and backup strategies**, integrating AWS Backup, Azure Site Recovery, and cross-region replication.
- **Built and deployed scalable API architectures** using AWS API Gateway, Azure API Management, and Lambda functions.
- **Managed cloud networking configurations**, including VPCs, Security Groups, Route 53, Azure Virtual Networks, and VPN connectivity.
- **Integrated Jira and Slack** into DevOps workflows to improve collaboration and streamline incident response.
- **Deployed centralized secrets management solutions** using AWS Secrets Manager, HashiCorp Vault, and Azure Key Vault.
- **Implemented automated compliance checks** to enforce SOC 2, HIPAA, and PCI DSS across cloud environments.
- **Designed and deployed self-healing infrastructure**, implementing auto-remediation workflows with AWS Step Functions and Azure Automation Runbooks.
- **Developed auto-scaling strategies** using AWS Auto Scaling Groups and Azure Virtual Machine Scale Sets.
- **Led cloud migrations**, including on-premise to AWS transitions, ensuring minimal downtime and optimized cloud-native architecture.
- **Implemented Kubernetes security policies**, such as Pod Security Policies (PSPs), Network Policies, and RBAC enforcement.
- **Managed hybrid cloud connectivity** with AWS Direct Connect, Azure ExpressRoute, and VPNs to ensure seamless integration between environments.
- **Configured and optimized CI/CD pipelines** for Java, Python, and Node.js applications using Gradle, Maven, and Ant.
- **Deployed and managed microservices architectures** using Kubernetes Operators, Kafka, RabbitMQ, and AWS SNS/SQS.
- **Developed performance testing strategies**, implementing JMeter, k6, and BlazeMeter for load testing.
- **Integrated security scanning tools** into pipelines, ensuring compliance through automated vulnerability assessments.
- **Developed Helm charts** to automate the deployment and lifecycle management of Kubernetes workloads.
- **Managed source control workflows** using Git, GitHub, GitLab, and Bitbucket, enforcing GitOps best practices.
- **Implemented incident management and root cause analysis** using SRE principles, SLIs, SLOs, and error budgets.
- **Optimized DevOps automation** by developing and maintaining reusable Terraform modules, Ansible playbooks, and Helm charts.

- **Developed auto-remediation solutions** using **serverless functions (AWS Lambda, Azure Functions)** and **automation scripts**.
- **Implemented centralized authentication and authorization** using **OAuth2, OpenID Connect, and Azure Active Directory**.
- **Automated patching and updates** across cloud instances, Kubernetes clusters, and virtual machines.
- **Monitored and optimized CI/CD performance**, identifying bottlenecks in **Jenkins, Bamboo, and GitLab CI/CD** workflows.
- **Developed security automation tools** using **Python, Golang, and Bash** to enforce compliance and mitigate risks.
- **Designed scalable CI/CD strategies** to support **multi-cloud and hybrid deployments**.
- **Built and managed alerting pipelines** for proactive issue resolution using **Prometheus Alertmanager, AWS SNS, and PagerDuty**.
- **Configured Kubernetes ingress controllers** (Nginx, Traefik) and service meshes (Istio, Linkerd) for microservices networking.
- **Implemented infrastructure and application monitoring** using **Splunk, New Relic, and Datadog**.
- **Developed and tested Kubernetes Operators** for automating containerized application management.
- **Designed secure networking configurations**, including **private subnets, VPC peering, and firewall policies**.
- **Provided SME-level consultation on cloud-native DevOps architectures** to development teams.
- **Mentored junior engineers** on best practices in **Infrastructure as Code (IaC), CI/CD, and cloud security**.
- **Created and maintained detailed runbooks and SOPs**, improving operational excellence and reducing incident response times.
- **Developed production-grade automation solutions** to increase efficiency and reliability across the DevOps lifecycle.

Environment: AWS, Azure ,Terraform, Puppet, Ansible, Chef, ARM Templates, PowerShell DSC ,Kubernetes (EKS, AKS), Docker, Helm ,Jenkins, GitHub Actions, GitLab CI/CD, Bamboo, Bitbucket Pipelines ,Prometheus, Grafana, Nagios, Splunk, ELK Stack (Elasticsearch, Logstash, Kibana) ,Python, Golang, PERL, Bash, PowerShell ,AWS IAM, Azure AD, API Gateway, VPN, OAuth2, OpenID Connect, Git, GitHub, GitLab, Bitbucket, Jira, Slack , JMeter, k6, BlazeMeter ,PagerDuty, AWS SNS, OpenTelemetry

Role : DevOps Engineer

03/2017 – 04/2019 | United States

Client : Navitus Health Solutions

Responsibilities:

- **Designed and deployed AWS cloud infrastructure** using **Terraform, AWS CloudFormation, and AWS CDK** for automated provisioning.
- **Developed and maintained CI/CD pipelines** using **Jenkins, GitLab CI/CD, AWS CodePipeline, AWS CodeDeploy, and CircleCI** for automated software delivery.
- **Managed and optimized Kubernetes clusters (EKS)**, using **Helm charts** for efficient application deployment.
- **Deployed and maintained containerized applications** using **Docker, ECS (Elastic Container Service), and AWS Fargate**.
- **Implemented Blue-Green and Canary deployments** using **AWS Elastic Beanstalk and Kubernetes (EKS)** to improve release reliability.
- **Configured and optimized AWS networking** with **VPC, subnets, route tables, NAT gateways, security groups, and Elastic Load Balancers (ELB, ALB, NLB)**.
- **Monitored and optimized cloud performance** using **AWS CloudWatch, Prometheus, Grafana, Splunk, and New Relic**.
- **Implemented AWS Security Best Practices**, configuring **IAM roles, MFA, Security Groups, AWS GuardDuty, AWS Config, and AWS Security Hub**.
- **Automated infrastructure provisioning** using **Terraform and AWS CloudFormation**, following **Infrastructure as Code (IaC)** principles.
- **Developed self-healing infrastructure** using **AWS Auto Scaling Groups, Lambda, EventBridge, and AWS Compute Optimizer**.
- **Integrated centralized logging solutions** using **AWS CloudWatch Logs, ELK Stack (Elasticsearch, Logstash, Kibana), and AWS X-Ray**.
- **Deployed serverless applications** using **AWS Lambda, API Gateway, and Step Functions** for event-driven automation.
- **Secured cloud workloads** by enforcing **AWS WAF, AWS Shield, and AWS Firewall Manager** to protect against DDoS attacks.
- **Automated configuration management** using **Ansible, Puppet, and Chef** to standardize cloud infrastructure.

- **Managed AWS storage solutions**, implementing **S3 lifecycle policies**, **Glacier backups**, and **EBS snapshot automation**.
- **Optimized AWS cost management** using **AWS Cost Explorer**, **AWS Compute Optimizer**, and **Reserved Instances**.
- **Developed Kubernetes security policies**, implementing **RBAC**, **Pod Security Policies**, and **AWS IAM for Kubernetes (IAM Roles for Service Accounts)**.
- **Implemented GitOps best practices**, managing infrastructure changes via **Git**, **GitHub**, **GitLab**, and **Bitbucket**.
- **Designed high-availability architectures**, leveraging **multi-region AWS deployments**, **Route 53 failover routing**, and **cross-region replication**.
- **Performed continuous security audits**, using **AWS Inspector**, **AWS Security Hub**, and **AWS Systems Manager Patch Manager**.
- **Deployed AWS CI/CD pipelines** with **AWS CodePipeline**, **AWS CodeBuild**, and **AWS CodeDeploy**, automating cloud infrastructure updates.
- **Configured AWS X-Ray and New Relic** for distributed tracing and debugging of microservices-based architectures.
- **Automated compliance checks** to enforce **SOC 2**, **HIPAA**, and **PCI DSS** using AWS security tools.
- **Developed performance and load testing strategies** using **JMeter**, **k6**, and **BlazeMeter**.
- **Implemented proactive monitoring** using **AWS CloudWatch Alarms**, **AWS SNS**, and **PagerDuty** for real-time incident escalation.
- **Optimized containerized workloads** using **Kubernetes HPA (Horizontal Pod Autoscaler)** and **AWS App Mesh**.
- **Managed cloud security policies** using **AWS IAM**, **AWS Organizations**, and **AWS SSO** for centralized identity management.
- **Designed and implemented cloud networking solutions** using **AWS Transit Gateway**, **AWS Direct Connect**, and **VPC Peering**.
- **Developed and deployed AWS Lambda functions** using **Python**, **Bash**, and **Golang** for infrastructure automation.
- **Integrated AWS DevOps tools** including **AWS CodeStar**, **AWS CodeCommit**, and **AWS CodeBuild** into CI/CD workflows.
- **Enhanced Kubernetes observability** using **AWS CloudWatch Container Insights**, **Prometheus**, and **Grafana** dashboards.
- **Deployed and managed containerized workloads** using **AWS ECS (Elastic Container Service)** and **Fargate** for microservices architecture.
- **Designed AWS storage and backup solutions**, implementing **S3 Intelligent Tiering**, **AWS Backup**, and **EBS volume snapshots**.
- **Led AWS Well-Architected Reviews**, optimizing security, performance, and cost efficiency across AWS workloads.
- **Documented DevOps workflows**, creating **runbooks**, **SOPs**, and **knowledge bases** for infrastructure and CI/CD processes.
- **Worked in Agile environments** (Scrum/Kanban), collaborating with developers, security engineers, and cloud architects.
- **Implemented serverless event-driven automation** using **AWS Lambda**, **Step Functions**, and **EventBridge** rules.
- **Optimized database management**, implementing **AWS RDS Multi-AZ**, **Aurora**, and **DynamoDB best practices**.
- **Integrated Jira and Slack** into DevOps workflows, improving team collaboration and incident resolution times.
- **Mentored and trained teams** on AWS DevOps best practices, CI/CD automation, and cloud security strategies.

Environment: AWS (EC2, RDS, S3, IAM, Lambda, CloudFormation, CDK, Compute Optimizer, Transit Gateway, Direct Connect, Route 53, VPC, Auto Scaling Groups, ELB, ALB, NLB), Terraform, AWS CloudFormation, AWS CDK, Ansible, Puppet, Chef, Kubernetes (EKS), Docker, Helm, ECS, Fargate, AWS App Mesh, Jenkins, GitLab CI/CD, AWS CodePipeline, AWS CodeDeploy, AWS CodeBuild, AWS CodeStar, CircleCI, AWS CloudWatch, Prometheus, Grafana, Splunk, New Relic, ELK Stack (Elasticsearch, Logstash, Kibana), AWS X-Ray

Role: Linux Administrator

01/2016 – 02/2017

Client : Bank of America

Responsibilities:

- Installed **Red Hat 4/5/6**, **Solaris 9/10/11**, configured systems, and performed periodic updates.
- Worked with **2 and 4-node clusters** using **Veritas Cluster Server (VCS) 4.0**, troubleshooting service group and resource issues.
- Managed software packages using **RPM/YUM** on **RedHat Linux** and performed patch management on **Solaris servers**.
- Configured and managed **VMware ESX Server 3.5**, provisioning **Red Hat Enterprise Linux** virtual machines.
- Installed and configured **LDOMS 1.2/1.3** (Control domain, Logical domain) for virtualization on **Oracle SPARC servers**.
- Automated configuration management using **Puppet** and **Chef**, ensuring consistency across environments.
- Administered **Veritas Volume Manager (VxVM)** for **NAS/SAN storage**, setup and managed **Veritas NetBackup** for disaster recovery.

- Secured **Linux systems** using **TCP Wrappers, PAMs, Iptables firewall, and SELinux** security policies.
- Performed troubleshooting on **Sun, IBM, and HP servers**, resolving booting, network, hardware, and OS-related issues.
- Configured and resolved **TCP/IP** networking issues on **RHEL 5 & 6 servers**, administered **NFS** on **Solaris and RHEL 6.5**.
- Installed, integrated, and tuned **LDAP, Apache Tomcat, JBOSS, WebSphere, and WebLogic** application servers.
- Managed user administration, creating groups, setting permissions, and managing user roles.
- Configured **EMC Storage**, creating **Storage Groups, Zones, Volume Groups, and RAID levels**, ensuring data redundancy.
- Worked with **ZFS, LVM, VxVM, and SVM** for filesystem and volume management solutions.
- Used **Veritas File System (VxFS) and Veritas Volume Manager (VxVM) 5.0** to configure **RAID 1 and RAID 5 storage systems**.
- Managed system logs, data backup, and restoration using **UNIX native tools (tar, dd)**.
- Developed **Shell Scripting (Bash, Python, Ruby)** to automate monitoring for logs, disk space, services, and processes.
- Used **Veritas Volume Manager 4.x** for managing **LUNs, disk groups, volumes**, and resizing operations across servers.
- Monitored system health and performed system administration, including installing/updating patches, firmware, and security updates.
- Tuned operating system and network configurations to optimize **application performance**.
- Configured **VMware virtual machines** on **Red Hat Linux** environments.
- Setup **Jumpstart / Flash and Kickstart servers** for automated provisioning of servers with predefined configurations.
- Installed and configured **WebLogic 9.x** and **JBoss 4.0 Application Server**, managing domain configurations and application deployments across environments.
- Configured **Big-IP F5 load balancers**, managing **pools, virtual servers, and proxies** for load balancing.
- Administered **DNS servers running BIND 8.2.x, 9.x**, managing both **intranet and internet DNS configurations**.
- Managed user permissions using **RBAC and Sudo**, defining **ACLs and creating different roles** for enhanced security.
- Installed and maintained **Veritas Cluster Server 4.x (VCS)** for high availability, managing storage through **Veritas Foundation Suite 4.x**.

Environment: Red Hat Enterprise Linux (RHEL 4/5/6), CentOS, Ubuntu, Debian, Solaris 9/10/11, IBM AIX, HP-UX, VMware ESX Server 3.5, KVM, LDOMS (Logical Domains), Oracle SPARC, Veritas Cluster Server (VCS), Xen, Puppet, Chef, Ansible, Kickstart, Jumpstart, Shell Scripting (Bash, Python, Ruby), PowerShell, TCP/IP, DNS (BIND 8.2.x, 9.x), Iptables, SELinux, RBAC, Sudo, SSL/TLS, PAMs, OpenSSH, FirewallD
