

Nabin Khanal
Ph:- (206) 899 7189
Email:-nabinkhanal027@gmail.com

(Full Stack Java Developer with over 8+ years of experience in Financial, Insurance, Government and HealthCare domains. Extensively experienced in Software Analysis, Design, Development, Implementation and Testing of Object-Oriented Applications using Java/J2EE.)

Technical Skills:

Java/J2EE Technologies	J2EE, Web Services, JDBC, MVC
Framework/ORM	Hibernate, Spring, Spring Boot, Angular
User Interfaces	HTML, CSS, JavaScript, AJAX, JSON, Angular 8,Bootstrap
Web Services	JAX-RS, RESTful Web services, Microservices
Libraries and Tools	ANT, Maven, Gradle
Databases	SQL, Oracle, MYSQL
Deployment Servers	Apache Tomcat, Docker, Kubernetes
IDE	Eclipse, NetBeans, IntelliJ, Visual Studio Code.
Operating Environment	Windows and Unix/Linux.
Debugging Tools & CI/CD	Jira, Jenkins, Version 1
Source Control	CVS, GIT and SVN.
Methodologies	Agile, Scrum and Waterfall.

Professional Summary:

- Experience in large scale Software Development Life Cycle (SDLC) including Requirement Analysis, Project Planning, System and Database Design and Object-Oriented Analysis and Development, Testing, Implementation and Documentation.
- Experience in developing applications using Spring Framework, Inversion of Control and Dependency Injection, Spring MVC, Spring JDBC.
- Experience in developing Microservices using Spring-Boot.
- Good experience in producing/consuming RESTful web services using Spring and JAX-RS specification like Jersey to implement REST API.
- Experience in producing and consuming messaging modules using Spring JMS and Rabbit MQ.
- Strong programming skills in designing and implementation of multi-tier applications using web-based technologies like Spring MVC and Spring Boot.

- Experience in User Interfaces design, development of Front-end application using Angular, AJAX, JavaScript, jQuery, TypeScript, HTML5, CSS.
- Created Modules, Custom Directives and services in Angular, which were used in various places in Angular application.
- Hands on experience in Core Java and profound experience in collection frameworks and Multithreading.
- Experience in various development tools like Eclipse, MyEclipse, NetBeans, IntelliJ, and RAD.
- Good experience with Source code management collaboration tools GIT, SVN, CVS.
- Experience in using build tools like Maven, Gradle and ANT.
- Exposure in writing automation test scripts using Selenium WebDriver.
- Experience in developing test cases for Unit Testing using JUnit, Integration Testing and System Testing.
- Experience in Mock testing using Mockito.
- Excellent Written, Verbal communication and interpersonal skills.

Education:

Bachelor's in Computer Information Systems, Idaho State University, Idaho.

Professional Summary:

Client: SRPMIC, Scottsdale, AZ

Sept 2022 – Present

Role: Full Stack Java Developer

Responsibilities:

- Designed and developed full-stack applications using Spring Boot, Thymeleaf, JavaScript, jQuery, and AJAX.
- Transferred logic from legacy application and created reusable components and services in Angular 8 using TypeScript.
- Developed RESTful APIs using Java with Springboot and integrated them into Angular Frontend to fetch and display data using HttpClient.
- Used Stream APIs, Collectors class, Type annotations, and many other features of Java 8+ to improve the performance of the application.
- Developed custom implementations of collection framework to optimize data structures and algorithms and to address unique business requirements.
- Mitigated critical security vulnerabilities using spring security.
- Created document template using Docmosis and iText with Springboot to support legal processes.
- Created interactive and responsive tables with JQX Grid, using JQWidgets and Thymeleaf for dynamic data rendering.
- Implemented MyBatis for ORM, for interaction between Java objects and SQL databases to optimize data retrieval and manipulation for legacy application.
- Troubleshoot and resolved production-level issues, ensuring smooth performance.
- Helped team to migrate from tortoise SVN to GIT for the version control.
- Wrote and optimized complex SQL queries to generate SSRS report.
- Performed manual API testing with Postman, ensuring reliability and compliance.
- Utilized Docker for efficient application containerization and deployment.
- Used Jira as a project management and bug tracking tool.
- Maintained GitLab repositories and automated builds using Maven.

Environment: Java EE, Spring, Spring Boot, Microservices, Thymeleaf, Angular 8, Typescript, Visual Studio, SSRS, Agile/Scrum, HTML, JSON, REST, JavaScript, My Eclipse IDE, Docker, GIT, Maven, Windows, MySQL.

Client: *USAA, Austin, TX*

March 2021 – May 2022

Role: *Full Stack Java Developer(Lead)*

Responsibilities:

- Analysed the Business Requirements and Prepared the Analysis Documents and finding the Road blockers for the Project and Worked efficiently with the Team.
- Worked on converting the monolithic application to Microservice based architecture.
- Managed an offshore team, providing technical guidance and ensuring successful project execution with timely and high quality delivery.
- Developed a set of microservices(User, Search, Report) using Java, SpringBoot and MySql.
- Worked on implementing new and addition logic to the existing Microservices using Spring Boot.
- Implemented X-ray, Twistlock and Conjur in multiple microservice projects.
- Used GIT for the version control.
- Worked on Debugging the Services and made changes to the functionality accordingly.
- Responsible for Knowledge transferring to the teammates and provided all the necessary Information to complete the project in time.
- Worked on creating change order in ServiceNow to retire/delete the old test accounts according to the Business Requirements.
- Knowledge and hands on experience in Messaging Middleware using Kafka.
- Experienced Working on CI/CD Pipelining while Deployment.
- Used Kubernetes at the time of Deployment.
- Used Jira for bug tracking, issue tracking and project management.
- Maintained the code repository on GitLab through frequent and definite updates and built the application using Maven.

Environment: Core Java, Spring, Spring Boot, Microservices, Apache Kafka, Agile/Scrum, HTML, JSON, CSS, Angular 8, REST, JavaScript, My Eclipse IDE, Kubernetes, GIT, Maven, Junit, Windows.

Client: *U.S Bank, Minneapolis, MN*

July 2019 – February 2021

Role: *Full Stack Java Developer*

Responsibilities:

- Involved in the complete SDLC (software development life cycle) of the application from requirement analysis to testing.
- Followed Agile Methodology in analyze, design, and document the application, which will support functional and business requirements. Coordinate these efforts with Functional Architects.
- Developed the UI using HTML5, CSS3 and Angular 7 for interactive cross browser functionality and complex user interface.
- Developed reusable components with Angular7 custom directives.

- Involved in designing the client-side module architecture based on new Angular Framework.
- Deployed Spring Boot based microservices on Docker.
- Designed and developed RESTful API and services using best practices to interact within the microservices and with the front end.
- Developed the Controller to handle the requests and responses.
- Used Spring Security for Authentication and Authorization of the application.
- Used spring Data Framework to use the features of Spring JDBC and Spring ORM classes like JDBC Template to perform the database operations by connecting Data Sources available.
- Used Rest Controllers to replace the existing operations layer, which acts as bridge between business layer and the UI.
- Used MySql as data storage.
- Worked alongside testing team on Selenium to prepare cucumber feature file for automation testing.
- Developed Unit Test Cases. Used JUnit for unit testing of the application.
- Configured pom.xml to deploy the project using Maven.
- Provided Technical support for production environments resolving the issues, analyzing the defects, providing and implementing the solution defects.

Environment: J2EE, HTML5, CSS3, JavaScript, Apache Kafka, AJAX, Angular7, Bootstrap, JSON, MySql, Spring Boot, Micro-services, Spring JDBC, REST, JAX-RS, JUnit, JIRA, Maven, GIT, Jenkins, Agile Methodology.

Client: *Capital One, Rolling Meadow, IL*

August 2018 – June 2019

Role: *Full Stack Java Developer*

Responsibilities:

- Involved in various phases of Software Development Life Cycle (SDLC) and implemented the process using Agile (Scrum) methodology.
- Implemented the front end using HTML 5, CSS3, Bootstrap, JavaScript and Angular JS.
- Created responsive web pages using Bootstrap and wrote client-side application in a clean MVC model using Angular 4.
- Developed RESTful Web Services with JAX-RS using Spring Boot and Micro Services Architecture.
- Implemented the application using Spring IOC, Spring Boot, Spring Security and Hibernate.
- Used a Microservices architecture, with Spring Boot-based services interacting through a combination of REST and Spring Boot.
- Implemented Core Java concepts like Multithreading, Concurrency, Exception Handling and Collections wherever necessary in the application.
- Developed Micro-Services based architecture to enable the application to be deployed on AWS.
- Used AWS services like EC2 for CI/CD pipeline, S3 bucket for storage and data backup and Application Load Balancer to optimize traffic and scalability using AWS.
- Developed complex SQL queries for extracting data from the MySQL database.
- Used Maven as build automation tool and responsible for Continuous Integration (CI) and Continuous Delivery (CD) process implementation using Jenkins.
- Used GitHub as Version Control tool, Junit for testing and Eclipse as IDE.
- Deployed and tested the application on WebSphere Application Server.

Environment: Java/J2EE, HTML 5, CSS3, Bootstrap, JavaScript, Angular 4, Spring, Hibernate, CRUD, Spring boot, JDBC, GitHub, Maven, Junit, Spring Boot, Microservices, REST, Micro Services, AWS, Eclipse, Log4J, SQL, Oracle.

Client: Nationwide Insurance, Scottsdale, AZ

January 2018- August 2018

Role: Full Stack Java Developer

Responsibilities:

- Worked in various phases of Software Development Life Cycle SDLC such as requirements gathering, modeling, analysis, design and development which is developed based on agile methodology.
- Designed and developed various modules of the application with J2EE design architecture, frameworks like Spring MVC architecture and Spring Bean Factory using IOC, AOP concepts.
- Wrote front end application development with HTML, Javascript, AJAX, XHTML, and CSS.
- Integrated the application with Spring-MVC using Spring Boot, Spring Dependency Injection (DI), and Spring Annotations.
- Used a Microservices architecture, with Spring Boot-based services interacting through a combination of REST and Spring Boot.
- Used Object Relational Mapping Tool Hibernate for the interaction with the database.
- Used JDBC to access database and developed Stored Procedures for executing SQL statement.
- Used DB2 Database to support the SQL language and used JDBC for DB2 connectivity.
- Used Eclipse as the IDE and deployed the application on Web Logic application server.
- Used Log4J to monitor the Error Logs and wrote build scripts for the application using ANT.
- Wrote and executed the Test Scripts using JUnit.

Environment: Java/J2EE, Agile, Spring Boot, Microservices, Hibernate, JSP, AngularJS, JavaScript, HTML, AJAX, CSS, ANT, Spring MVC, JMS, DB2, JUnit,
